have said, 'What if the plan is played out and happening when there are tons of new honest users and new honest people who are joining the internet and news groups everyday and are willing to give it a try?' Estimates are at 20,000-50,000 new users every day, with thousands of those joining the actual internet. Remember, play FAIRLY AND HONESTLY and this will work. You just have to be honest. Make sure you print this article out RIGHT NOW also. Try to keep a list of everyone that sends you money, and always keep an eye on the news groups to make sure everyone is playing fairly. Remember, HONESTY IS THE BEST POLICY!!! You don't need to cheat the basic idea to make the money! GOOD LUCK to all and please play fairly and reap the huge rewards from this, which is tons of EXTRA CASH.
BY THE WAY: If you try to deceive people by posting the messages with your name in the list and not sending the money to the rest of the people already on the list, you will NOT get as much. Someone I talked to knew someone who did that, and he only made about $150 and that's after 7 or 8 weeks! Then he sent the 5 $1.00 bills, people added them to their lists, and in 4-5 weeks, he had over $10k. This is the fairest and most honest way I have ever seen to share the wealth of the world without costing anything but our time! You also may want to buy mailing and e-mail lists for future dollars. PLEASE REMEMBER TO DECLARE YOUR EXTRA INCOME!!!!!!"

Did I miss something ?

Isn't the center of the 902 to 928 MHz "BAND" at 915 MHZ?????

MANY MANY commercial antenna manufacturers off excellent, proven antennas specifically for the 902 - 928 MHz band due this bands recent popularity for unlicensed operations. Try Maxrad brand available thru Tescco distributer at 1-800-472-7373.

Posted as a satisfied 902 - 928 antenna USER. Over 200 in service

Hello Bill;

I have had a DJ-S41 for about 4 months now. I am using nicad batteries with average usage about 30 minutes tx and 4 to 6 hours rx I can expect batery life of about 4 days. That is on low power.

The Alinco home page says that low power is 50 miliwatts.

I love the radio. I would highly recomend it to anyone. I have a friend that has one and is using rechargable akaline.

Interesting you purchased a new 706 MK II at Dayton when they were not
even for sale there. The radio did not receive FCC Type Acceptance
until Friday May 16 with beta testing not accomplished until a week

later. Then the first units shipped to dealers the week of May 31.
You sure you do not have an original 706 ?

5425. 20 Watts loss on 100 ft of cable???

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-07 00:00:00 UTC
From: tnic <tnic@IDT.NET>
Message-ID: <5nav6r$c85@nnrp2.farm.idt.net>
Source record: 173617

I hooked a power meter and dummy load on two 100ft runs of 9913 flexable from Cable Experts.

I have 50 watts going into the cable and 30 at the far end just before the dummy load on 2 meters.

On 440 its even worse. Its 35 watts out of the radio and 12 watts at the far end.

I have heard all about cable loss and connector loss theory from local sources and charts.

In plain language is this normal for a 100 foot run?

Have you had similar results?

Since it is the same on 2 cables I doubt its a bad connector.

Thanks for your feedback.

>My opinions are my own, not my employer's.

Mike:

I go to Taiwan a couple of times a year. When I first started going I thought I'd find good deals on Ham gear. What I found was the usual gear we can buy here at much higher prices. I did find a couple of Taiwan made HT's but they were also higher than what we could buy here.

There is an area (shopping district) in Taipei which sells computer and ham stuff. It is fun to go to to see what is there and to kill time. I was taken there so I can give you directions but just find out where the computer shopping district is and you are there (I hope!)

Regards,

Jack - KS4LS

Source record: 173623

Hello everybody,

Can someone tell me how i can reduce the power from
the kenwood TM-V7E ?
I have a novice-license,and i may use 25 watts, but the
TM-V7E have 50/35 watts in high position.
Now i use only the middle position,and that's 10 watts,
but i should like when i can make 25 watts in high position,
on 2 and 70.
Maybe it's also possible to change the high, middle and
low position seperate from each other ??
All information (mods) are welcome.

Thanks in advance

5438. Kenwood ts 690s:problem

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-08 00:00:00 UTC
From: Jay Tyson <skipt1@ix.netcom.com>
Message-ID: <5nev0t$l1l@dfw-ixnews9.ix.netcom.com>
Source record: 173431

I have had an intermitent problem on 6 meters with this radio. While
transmitting on ssb the swr goes up to about 3to1 from almost flat, alc
indicator goes full scale and of course rf output drops to about five watts.
When this is happening you can stop talking into the mike and there is still
RF going to the antenna.
It seems that there is some internal occillation that is causing this. The
big problem is that it has been to Kenwood repair and the cannot get it to act
up on a dummy load. They cannot or will not test into an antenna. The only
thing they did down there was to keep it 2 months and extend the warranty for
ONE month.
We have tried every conceivible combination of grounds, antennas, feed lines
so we think it is a problem with the 690.
Has anyone had this problem? Any help would be appreciated. Thanks.

5440. Adding elements to existing Yagi (440)

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-08 00:00:00 UTC
From: tnic <tnic@IDT.NET>
Message-ID: <5nevjd$nj@nnrp4.farm.idt.net>
Source record: 173433
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.antenna

I am using a Cushcraft A270-10 Dual band Yagi.

It has 5 elements on 2m & 5 elements on 440. There is plenty more room on the boom for more 440 elements. Can I add more without messing up the antenna?

More elements should improve the receive and transmit signal right?

Thanks for your input.

YAESU 901 DM (deluxe Model) HF 160/80/40/20/15/10a/10b/10c/10d/WWV with 11 meter mod! 100W.
SSB/FM/AM/CW/FSK.
Bright red LED Frequency display.
All solid state plug in modular boards with (2) tube, smooth finals. Tuner and finals match wide range of Antennas.
VOX. Keyer. APF CW filter. SSB notch filters. Noise Blanker. Plugs right in to AC or easy to wire for DC (AC/DC internal). Operation manual included!
Easy connections on back for patch or transverters unit (6m,2m,440).
Save big time because this highly sensitive rig has a built in AC or DC power supply, Tuner, Keyer,VOX, Current meter, SSB and CW filters, 11 mod, and optional transverters. Unbeliveable nice signal and recieve charateristics. After all, it's a YAESU. All for only $429 plus $25 shipping UPS to your front door. If you prefer COD add $49 for shipping.

You need to also press the "Monitor" switch in; this will activate the sidetone. I just read your message and reached over to my 940 to confirm that! Thought it might be something simple. Can't help you on the year of manafacture though, sorry.

Hold down Knob and Monitor while turning on the radio. The display will
read

ALRST prs F

Press the "F" key and the radio will be reset.

Hello -

Looking for a manual (or copy) for a Motorola (by Measurements Corporation) model S-1320 RF Signal Generator. 1970's vintage RF Sig Gen, solid state, used primarily in the commercial radio trade.

Will pay any and all costs to get the manual for my ham-fest treasure!

Thanks for reading this.

>
>One version talks about removing a yellow wire and re-attaching it to a
>transistor next to J8. The wire is soldered to the hole next to J9.

What this does is switch to the 2m receive filter for any frequency above
130 MHz. Since the 2m filter is a bandpass filter centered on 2m, sensitivity
falls off the further either side of 2m you tune. It is barely usable at 162.55 MHz.
A more primitive varient of this mod is to just cut the yellow wire and leave it
loose. That forces the radio to use the 2m bandpass filter all the time above
60 MHz. That kills FM broadcast and AM aircraft reception completely, but
does let you hear National WX as well as the more complex yellow wire mod
does.

>The other version talks about removing diode 60 and cutting the jumper
>next to it labeled W4.

This wouldn't appear to do anything useful.

>Now you're saying remove a cap, and remove another cap and solder it
>to the top of an existing cap.

Right. The *real* problem is that the wide span VHF receive filter is a lowpass
structure with a 3 db cutoff frequency near 130 MHz. By doing this mod, you move
the 3 db cutoff to 196 MHz. That gives you full sensitivity over the entire tuning
range. You get more pager crud outside 2m too, but that's the price you pay for
wide span reception capabilities. 2m performance doesn't change because it
has its own bandpass filter.

>So... Which is the best way to get the 706 to hear?

That's it.

>My unit can't hear any AM broadcast below about 1100, and is deaf as a post
>between 108 and 146 and anything over 148. I would like to get the
>radio to perform as ICOM originally advertised the radio.
>Continuous receive from 30kHz to 200 MHz. Lee

Well, I can't help with deafness below 1.1 MHz. Mine meets specs down in
that area without changes. You may have a defect there. If your radio is deaf
below 130 MHz, it appears that it may already have the partial yellow wire
mod, or a component failure in the filter switching circuit that mimics the
yellow wire mod's effect. That sort of response is one of the undesirable
side effects of that mod.

The first thing I'd do is to try to get the radio to work the way it was supposed
to out of the box. Yours isn't. Then I'd perform the capacitor changes to correct
the cutoff frequency of the wide span receive filter. That was a design flaw.

The radio has two other major design flaws. The noise blanker noise amplifier
pickoff is *after* the IF filter. It should be *before* the filter. That's why the noise
blanker works so poorly. It is the same blanker design as was used in the IC735,
but the circuit works in that radio because the pickoff is before the IF filter. I moved
the pickoff point for the blanker in mine. It works much better now.

The other flaw is that the preamp design is poor, having a very poor IP3. That
causes the overload problems the radio exhibits with the preamp on. I don't see
any fix for the internal preamp short of ripping it out and starting over with a better
design. That didn't look too practical, so I went to an external preamp and leave
the internal preamp off. I use a stiff GASFET antenna mounted preamp. That's
better anyway.

I've considered adding a thermal switch for the fan, like the Mk II has, but the fan
noise hasn't been bothersome to me so I haven't done it. The radio also has a
keying defect when using the internal keyer. Code elements have their leading
edges truncated. Since I don't operate Morse, I've ignored that problem. Some
people have complained about low audio with the supplied hand mic. I find that
if I close work it as intended it is fine. But you can open up the mic and remove
the rubber baffle for more sensitivity (more road noise too, though, if you use
it mobile). Icom has a resistor change mod which increases the radio mic amp
gain. I wouldn't do that. If you need more audio punch, switch to a microphone
with a higher output. I find that the SM-6 desk mic is an excellent match for
the radio. A hand mic from one of the Icom 2m rigs can also work well. (You'll
need the adapter which lets you use the 8 pin connector mics with the RJ45
connector on the radio.)

tnic wrote:

I hooked a power meter and dummy load on two 100ft
runs of 9913 flexable

from Cable Experts.

I have 50 watts going into the cable and 30 at the far end just before
the

dummy load on 2 meters.

On 440 its even worse. Its 35 watts out of the radio and 12 watts at
the

far end.

I have heard all about cable loss and connector loss theory from local

sources and charts.

In plain language is this normal for a 100 foot run?

Have you had similar results?

Since it is the same on 2 cables I doubt its a bad connector.

Thanks for your feedback.

73

=TOM=

tnic@idt.net

Well, I did some of the math, and on 440 at least there is only about
5 w difference between your measured output and the expected based on a
2.83 db losss /100ft at 445.0mhz. I might guess that it might be
some measurement error on your power meter.....plus some loss for the connectors...

Also, you mention the power going in...did you measure that, or are
you taking the MFG. word on it...

For a low cost HT, the Alinco DJ-S41T does a VERY good job. I own 3 of them.
One for me and the other two are for my sons who just got their licenses.

The only bad part to the radio is it can pick up a lot of intermod noise. :-(
Oh well, for $120 (USA) one can't expect everything.

I carry mine almost everywhere; the small size and light weight makes it easy
to carry around. Plus, I can hear and reach the local repeater most of the
places I go to around town. :-)

There are a few hints at my 6m FAQ page:

http://ourworld.compuserve.com/homepages/rhea/sixmeter.htm

It depends on your budget, and what you want to do. There is now
a vast selection of 6m rigs on the market. I use the Icom 575H
at home, and the Icom 706 for mobile, which are both 100 watt rigs.
These are both great 6m rigs. The 706 lacks the receiver sensitivity
of the 575, but considering its small size and the fact that it also
covers HF and 2m, you can't complain.

Hi,
Trying to repair a Yaesu FT-101 and am in need of a set of output tubes. Either new or used/tested/guaranteed is ok. Low price is paramount.

thanks,
mailto:joentam@transend.com.tw

Hi all:

I just bought at a hamfest a used Standard C-108a 2m shirt pocket HT.
Seems to work fine. Are there any mods for this radio?

I've looked in all the "standard" places on the net, but no one has a
mod for this radio, except in a radio modifications book 9b.

Thanks for your time, and bandwidth.....

Source record: 173460

The antennas don't come off for a reason, Bill. That is so people like
you don't turn it in to another 11 meter disaster. The FCC rules for
FRS are .5 watt max and integral (non-removeable) antenna.
If you want to operate illegally, with big antennas and lots of power,
why not stay on the CB band?

5468. FT50r & VX-10

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-08 00:00:00 UTC
From: boggess@mail.feist.com
Message-ID: <339c43fc.3011895@news.fn.net>
Source record: 173461

I saw some older posts about the VX-10's FTT-15 key pad & how it might be possible to use it with a FT50r.
Has anyone figured out how to adapt the FTT-15 keypad for the VX-10 to work with a FT50r???

I also have a few questions about the VX-10

1. Will it Tx on the 2m band (can it be used for 2m)

2.Will the display show actuall freqs or just channell #'s

3.Will the ADMS softwarework with it or does it come with it's own software?

Message-ID: <339AFCD0.7CE0@bighorn.accessnv.com>
Source record: 173462

As a shopper for any equipment here are some things that I look for. Chances are if these criteria are not met, I simply don't go back. On the other hand this list will assume that I the customer have done my homework and know what I'm looking for.

They are as follows:
1. Was I greeted when entering the location?
2. Was there a large inventory? Was it well displayed?
3. Was there adequate staff? Were they busy with other customers? If so, did they acknowledge my presence?
4. Was pricing competative? Were the items brand names?
5. When approaching a salesperson with a specific question did he answer it? If he did not know the answer did he make an immediate effort to find the answer. Was he knowledgeable? Did he ask a lot of questions?
6.Did he say I don't know and move to another subject?
7.Did he attempt to qualify me for use and purpose? Or, did he just point to an item and "say we have this"?
8 Was the salesperson pressured by other responsiblities or was he focused on me?
9. When interrupted by another customer did he remain focussed on me by excusing himself?
10. If they did not have the product I was looking for did they make a suggestion of where to find it? If it were back ordered and expected in a short period of time did they state so?
11. Did they explain the policies of return/exchange at the time of sale. Did they mention terms of Warranty?
12. Did the sales person close the sale with a product of quality, priced competatively, and is it suitable/compatible for my use?
13. Did that person thank me and present me with a business card?

As a shopper who is prepaired to buy an answer of "NO" to more than 4 items on the above list would probably indicate that I will not go back or frequent that business.

e-mail: sv2bbm@hol.gr

I have buy the TM-V7A a month ago.Please if someone knows, please let me know for;
1. The remote control (via an other V/U DTMF transmitter)doesn't work. The TMV7A is always "lock" and the microphone control is off.I have already check for the same code between the two Radios.
2. Is there any modification for the Kenwood TMV7A to transmit the 1750 Hz tone ?

5477. TS-940: CW tone and serial number

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-08 00:00:00 UTC
From: vbajaj@portal.stwing.upenn.edu
Message-ID: <5ndh6l$s6e@netnews.upenn.edu>
Source record: 173494

Hello,

I have just started using a TS-940 and have several questions.

First, I have no microphone yet; when I attach a key and
press it in CW mode, nothing occurs. If I press the VOX
button, I can get the radio to then send with each key press,
but I have no CW sidetone (I have tried to adjust the sidetone
volume at the bottom of the radio). Is this an esoteric problem,
or is there some simple error on my part?

Finally, the radio has a 7 million serial number. What
year was it manufactured? I notice several essential modifications
posted on Kenwood's web site (ALC, output transistors that blow
etc.) and was wondering if any of these should be investigated.

Thanks in advance,

Vik

5478. Re: Icom 706MKII Info.

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-08 00:00:00 UTC
From: Michael Aust <maust21401@earthlink.net>
Message-ID: <339AE135.5BE1@earthlink.net>
Source record: 173495

I had the chance to compare both radio's in London
and one thing I found was that the 706 Mark II really
improved along the following lines below:

1.) Improved TX quality audio!!!
2.) Improved RX audio, no more tinny sound speaker, great on FM
broadcast now 88-108Mhz, compared to the earlier 706!!
3.) Better Rx 60-200Mhz receive sensitivity.
4.) MARS/CAP split operation capable
5.) FM broadcast overload in Aircraft band
(Not heard in 706 Mark II
6.) Thermal Fan(On new improved Power Amplifier)
7.) Tone Squelch Receive (UT-86)
8.) Split operation for those strange repeater splits.

I think Icom will be producing this rig for a number of years,
it looks like major improvements in both firmware and hardware
were done!!

On HF , improved RX audio was noticed, especially when using the
passband tuning, did not have a high pitch sound which was hard to
listen to when adjusting passband tuning.

Has the same good sound as the Alinco DX-70, but with more features!!
Maybe that was the Idea to cautch up the DX-70, I think they did, now
it will be tough for the Alinco shoppers to decide between the new
706Mark II and Alinco DX-70!!

73

Mike

Source record: 173496

Just had to reply to this one:

I'm the original poster of this question, FRS on HTX-204. I wanted to know the legality, and was given the straight dope, with a technical basis to boot (500mw, fixed antenna, 3kHz FM deviation). I will not be using my 204's on FRS because of this. I want to thank the amateurs who replied to my question. This is truly the amateur spirit at work in the newsgroup.

Eric (K0AVW)

PS: I've talked the radio-curious friends who were interested in FRS'ing while on vacation into getting their Tech licenses. Everything can work out fine, now and then.

Subj: "SHOW ME DA MONEY!!!!!!!!"
Date: 97-06-07 21:01:09 EDT
From: PIMPIN E

Take the time to read this and you will be on your way to making the easiest
money you ever made sitting at home on your computer.This detailed,yet simple
program will allow you to make a small fortune in under two months with
starting costs of only $5.00.I'm talking about money around$10,000-$20,000
depending on how much time you put into it.
Print this article out now!

JUST TRY THIS--ALL YOU HAVE TO LOSE IS ABOUT $8.00!!!!!

All you have to do is give this a try and judge for yourself.You'll be more
than satisfied with the conclusions you will reach.
Here's the program.

1.Mail $1 to each of the 5 names you see on the list at the end of the letter.
2.Send a note on a piece of paper saying"Please add me to your list".
(remember to wrap the paper around the bill so the postal workers wont steal it)
Also mention what slot or number the person was in when you mailed them $1.
For example:if John Doe was in slot #1,you would write,"John you were in slot#1".

3.Move the names on the list up one increment.This means the #1 person will
no longer be on the list and everyone will move up one number.PLACE YOUR NAME
IN SLOT#5 RIGHT NOW!!

4.Take this letter with your name added to the list and post it in as many
newsgroups and BBS as you can.Re-post the letter after a week has passed to
as many news groups you can.Re-post as many times you like in the initial
three weeks.THE MORE THE BETTER.The more newsgroups you post this to means

the more money you will make.(You want to expose this to as many people as possible.

5.Post a catchy subject line in each news group to attract people to reading
your letter.

6.Just sit back and relax.If you followed the instructions and posted it in
enough newsgroups you are gonna have a new car or whatever else you want in
life in less than two months.There will be money comming in slowly until the
3rd week when you will get a flood of letters with $1 in them! If your like
me,you will have a stack of one's over ten feet high.You'll be laughing all
the way to the bank with 10,000 one dollar bills.

7.The last thing to remember is to save the pieces of paper you recieved from
people with $1 in it to be legal and avoid hassles with the I.R.S.

8.This business is totally legal under title 18,section 1302 and 1341 of the
U.S.Postal Laws.
9.Make sure to remain honest at all times and to keep the integrity of the list intact.We are all working for each other!
HERE'S THE LIST OF NAMES:
#1.Shawn Neil
901-1424 Nelson St.
Vancouver,BC. V6G 1L9 *Canada
I HAVE MADE $2856.00 LAST WEEK ALONE!!!!*

#2.Peter Jamison II
18955 Ridgeview Circle
Villa Park,Ca.92861 *USA*

#3.Sara Lopez
320 Lincoln apt.24
Lansing,Mich.48910

#4.Eli Cabanas

Source record: 173504

when doing the lamp-knob-ptt pwr on, i get BAND -F1-, that cannot be changed.

have to pardon my ignorance, but how do i get the thing to freeband?

it's an older cell-capable radio, and was mod'ed by the company i bought it from, HRO, so i have no idea what they did (probably the pull the cable out trick)

any help would be great, i have the adms1c software, so if that's needed, no problem

thanks
doug

I have had mine about 2 weeks. While the guy that I got it from showed
me how to use it, we had to tune an antenna, It came on for about 20
seconds after tuning an 11 meter groundplane to 40 meters with an
mfj949e.

> Thankyou,

May I suggest?

1) for tracking, know that there is a pattern mostlikely.
get a doppler set and spread the voting antennas
as widely as you can. Record the readings and the
actual transmissions and a clock signal.

This will give you locations for the most likely occurrence
locations. Put a recording surveillance camera there with
a clock in it. Thet will tell you who was there when the event
happened.

2) The perpetrator is seeking attention. When you feel you have
identified that person, adk him/her to help record an
announcement. In the announcement, have a phrase from
an early jam session. Divide it up into individual words, and
get it into the mesage.

take this to a forensic audio-print lab and get the two
compared.

3) Bring in your lawyers.
The recording of the jamming should be well documented.
The recording of the message should be the same and
valid. The "accidental" discovery of the resemblance of the
teo voices should be well documented.

4) Go for blood or not as your company chooses.

5) NEVER FORGET the event. The guy sounds like a nut, and
nuts become forests of problems.

Hope this helps.

Gary, I've seen at least two mods for restoring the receive in the 706,
and neither of them say anything about removing caps.

One version talks about removing a yellow wire and re-attaching it to a
transistor next to J8. The wire is soldered to the hole next to J9.

The other version talks about removing diode 60 and cutting the jumper
next to it labeled W4.

Now you're saying remove a cap, and remove another cap and solder it
to the top of an existing cap.

So... Which is the best way to get the 706 to hear?

My unit can't hear any AM broadcast below about 1100, and is deaf as a post
between 108 and 146 and anything over 148. I would like to get the
radio to perform as ICOM originally advertised the radio.
Continuous receive from 30kHz to 200 MHz. Lee

Well Charlie, freon is a wonderful non-toxic solvent for solder flux, and it makes a fine component chiller. Since it has a high breakdown potential, it is good for use with vapor phase cooled PAs too.

First off, it would not be legal to modify the transmitter in this
situation to increase the power.

However, even if that were not a factor, from an electronic point of
view, it is probably not practical.

The FRS units can run a maximum of 500mw (1/2 watt). Increasing the
power output would put an extra strain and load on the battery. Say you
doubled the power output and kept the same transmit/recieve time ratio.
Your battery life would be reduced significantly and in MOST cases you
would NEVER notice any difference in performance. Why??? To increase
the power output to 1 watt from 1/2 watt is only a 3db improvement. In
terms of radios that are equipped with an "s" meter, a single "s" unit is
approx. 6db. I know I can't tell any difference between a signal that is
an S5 and an S6. So to see any real difference you would probably have
to increase the power to 2 watts or better. Then your battery life would
REALLY go down.

So from a practical standpoint, you are better off to leave the radios as
they were designed.

Also, if the antennas don't turn or readily come off, I wouldn't try to
remove them. They may have some sort of lock nut inside, that if you
removed it, would have to go to a radio shop to get it put back on.

5505. filter behavior question

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-08 00:00:00 UTC
From: turner@safety.ICS.UCI.EDU
Message-ID: <12867.865788672@safety.ics.uci.edu>
Source record: 173522

Hi,

I have an Argonaut 515 and the 4 pole filter seems
less than I want. In particular, when I tune "down" in LSB
and go past the center freq and through where the other sideband
is, I eventually get to a place where there is a lot of high
pitched stuff coming through. It seems to be quite a ways down
from where the center freq should be, it is not just the other
sideband coming through, but the outer skirts of the other sideband
come through. It only happens on strong signals, but my other
radios do not exhibit this behavior, it is not overload as I
understand it.

"splatter
like
sounds" nothing rcv LSB
__________|___________|__________|____ on 75 meters, strong sigs.

"center freq"

I replaced the 4 pole filter with an 8 pole filter (model 220) hoping
that would fix the problem. It did not. I then figured I needed a lot
of shielding and grounding for the filter, so I put the filter on
copper board and used RG 174/U even for short runs in the area.
No help.

The one thing that seems to cure the problem is putting the 4 pole
filter back in the RX line where I was going to stick in a CW
crystal filter. It really seems to reduce, if not eliminate
the problem.

Now, I have no problem putting in 12 poles of filtering for the
SSB line in order to cure the problem, but I wonder if anyone has
any ideas what the source of the problem is? Also, if the problem
is inherent, would it be better to stick the 4 pole filter back
in the standard slot where the problem originates and put the
8 pole filter in the RX line only where it reduces the problem?
I plan to put in some relays and switch in a CW filter here from
the mode switch too.

I haven't set the carrier oscillators in this rig. Could they
be off frequency and cause this behavior? I plan to borrow a good
freq counter and do this soon. Ah, I haven't looked at the other
sideband behavior, I will check USB on strong 20 meter signals
today.

Anyway, thanks for reading. I would love suggestions and possible answers. I am also happy to further discuss this with anyone interested, including letting you know my eventual solutions.

I do not know about the 1750 hz burst tone. The US version doesn't do this. I CAN tell you the the US version DOES work via remote control of another radio -HT, mobile,etc. You can enter frequency, engage/disengage repeater fxn, raise/lower power, switch to memory channel/vfo/call(and presumabley add/remove a tone encode or decode. The 733 kenwood has some after market notes on this very similar fxn of the tmv7a. I have both radios & use each to crossband REMOTELY the other prn.

I have to disagree with Wyatt here. I have the DX-70TH and have comapred
the noise blanker with my Icom 735 and the DX-70TH won clearly.

My only big complaint about the DX-70TH is the filter. It could have a
better shape factor. Otherwise, I have been very happy with the unit. I
have used it mostly on six meters, but will occationally use it on HF when
my Icom RX can't pull the station in.

I would guess that the 4.02 MHz can be done by using
the split operation for MARS/CAP, but not with the automatic
offet (max is still 4 MHz.)
143.990/148.010 Mars split, I assume can be done with the
split VFO.

in my book it says, locate control board (front panel),(2) locate and cut DIODE D8,(3) reassemble the radio.(4) reset the microprocessor. (all reset, see user manual.)
it opened mine up from 118.MHz(?) to 174.mhz. i got the mod from a 1997 mod book. and it has proven to be very reliable ,but some modes dont go as they discribe. for instance the tell you to remove diode d8 on the front pannel. well you really remove d8 in a different part of the radio. so do at your own risk. but mine worked fine. if i remember though, d8 was somewhere else. but that was done out of the 1996 book and could have been updated. remember though theres only one d8 in your whole radio.

5523. Re: 20 Watts loss on 100 ft of cable???

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-09 00:00:00 UTC
From: Ralph Zancha <rzancha@moultrie.com>
Message-ID: <339BE1DF.763D@moultrie.com>
Source record: 173340

Hello Tom;

I have been a ham for 19 years and have had a lot of experience with 70 cm. The amounts of loss sound a little high maybe on two meters but on 70 cm it is likely to be in the ball park.

I think that most of the 9913 cloned cable is rated at 3.5 dp loss per 100 feet at 400mhz and you are higher in freq. so more yet plus connectors.

I put on a demo for the local club and showed them how bad coax loss can be. They were astonished. I had 30 watts into a 98 foot long rg58 and 2 watts out at the end. They could not believe there eyes.

By the way 3db is losing 1/2 of your power so you will more than likely see 2/3 of the power gone at the other end on 73 cm.

5526. Heathkit SB 200 - Help Please

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-09 00:00:00 UTC
From: John Cramond <john@gm4nhi.demon.co.uk>
Message-ID: <JKipiCAlj+mzEwE0@gm4nhi.demon.co.uk>
Source record: 173343

I have an SB 200 which provides excellent service on 20 metres, and has done so for many years. The amplifier uses a pair of 572Bs and with a plate current of 300 ma pushes out 300 watts for about 40 watts of drive. Great for 20 meters SSTV, but on 10 metres, things start to go wrong. Keeping the plate current down to about 100 ma and with minimal drive I can just about manage to get 100 watts out for a short time. Then the solder connection on the wire from the band change switch (Wafer B con. 1) to the loading capacitor/RF out relay melts, resulting in a loss of output as the wire parts company from the switch.

This generation of heat is a bit of a mystery. No rise in plate current and the signal appears to be completely clean, SWR is fine and all the RF chokes appear to be healthy. I have the circuit diagram but no manual,although I doubt if it would help in any case.

I wonder if anyone else has had problems with the SB 200 on 10 metres and if so what the problem was found to be?

> talk to similar modems or to some network hub? Specs? Freq? Thanks for
> any info.

They communicate with other GINA radios in the 902-928 MHz ISM band.
Direct
sequence spread spectrum, 21 pre-assigned channels. 725 milliwatt output
(28.6 dbM), BPSK modulation. Baud rate 1200 - 19.2K, any data format,
half-duplex, suitable for point-to-point or point-to-multipoint
operation.
Range:(from the specs) Nominal: 800ft, Indoor: 500-1500 feet, Outdoor:
Up to
1 Miles - Direct Line-of-Site (their spelling, not mine)

I have 2 pair of these units on my desk at this moment and haven't been
able
to get more than 2100bps throughput no matter what the baud rate is set
for.
Lots of dropped frames and data errors. It may be that I have something
set
incorrectly but I haven't had time to track down the source of the
problem.
Supposedly these were pretty much plug-and-play but so far I haven't
been
very impressed.

Pinouts:
DB9 connector
2 - Rx data (from GINA)
3 - Tx data (to GINA)
5 - Signal Ground
8 - Clear to send (from GINA)

All other pins are marked as "NOT USED"

Address:
GRE America, Inc
425 Harbor Drive
Belmont, CA 94002

NOTE: I am not affiliated in any way with GRE, their suppliers, their
distributors, etc, etc. I just bought the #)@&*^*%!! things and have

to install them and make them work.

Bob,

I've owned at least six of the Alpha amps, 374's, 76A's, 76PA's.
There is no comparison between an SB-220 and an Alpha.
Similar to Apples-to-Oranges, the Alpha being in an entirely
different class (upper crust). The 8874 is an excellent tube and not
too terribly expensive, as well as available from sources.
Output from the 76A should be in the 1250-1650 watt range,
2X 8874, Output from the 76PA, in the 1750-2150 watt range,
3X 8874, depending on the state and condition of the triodes.
It's the elite desktop amplifier of Amateur Radio, as far as
I'm concerned. I have the manual (copy) if you're interested, and can
fax same if desired. Let me know, if you want a copy.
I just recently ordered a New Alpha 89 amp.,
2X 3CX800A7's in the final. Tells the story, so they say.

Have a entire collection of tubes about 700+ for Collins Gear and
other gear and military gear. Several are new in the box such as ,811's,
812's,814, 572B(new),6146B and numerous others. Also have a Heathkit
tube tester
in suitcase and another tube tester. Also signal generator and scope and
other
old test gear from the 20's-60's. Plugged em in and they come on.
Selling as a package. Their are also 5 boxes of
resistors,caps,parts,dials,
shafts for Collins and other radio gear. Most look unused.
If your interested you may want to call as their is more stuff also and
I can tell you about some of the tubes.

I can cross band repeat and remotely turn cross band repeat on and off.
It works pretty good.

I like the one way repeat for repeaters. That way I can listen on the
repeater output and use my hand held and TM-V7A to boost my signal into
the repeater. This prevents the need to wait for a repeater time out
before I can transmit to the repeater again.

One way repeat is great for that. On two way repeat the repeater will tie
up your rig with a dead carier etc. You get the idea.

It is temperature activated and only comes on when needed to cool the finals. There was a version of the TS130S (the SE, I believe) which was sold without the fan. Try keying it down into a dummy load for a while. If the p.s. circuit breaker doesn't blow, the fan should come on after a while.

However, be aware that it is a very quiet fan. It may be on even though you can't hear it.

73,

David, WA7ZYQ

Message-ID: <1997Jun9.093801.1@evax02.d51.lilly.com>
Source record: 173356

My two cents worth.... there is a 500 hz and a 250 hz slot in the first IF of
the Omni VI+, as well as a 1.8 khz slot for SSB.
The second IF has TWO filter slots... N1 and N2. You can install another 500
and a 250 and therefore have a choice of combinations.
Of course, all filter switches are there, but you must purchase the filters.
One warning... I bought 250 hz filters for both IFs. If you want to operate
with both 250 filters inline, you had better like your CW sidetone at 750 Hz.
Because that sucker is NARROW!

KM1H has LOTS of mods for the TS-940... you can get his Email address off the Buckmaster call server... I think he may even do 940 mods for a fee.

He tells me that a 940 with serial number below 8M probably could use some of the upgrades.. my 940 is in the 8M series... but one helpful mod is to install PIN diodes in the front end to improve reception... fortunately I don't have to do that

One way to check manufacture date is to look at the manfacture dates stamped on internal components. I noticed that the fan drive motors have manufacture dates on them (I had one go NOISY on me so I switched the power amp fan motor with the power supply fan motor, because the amp fan runs more frequently)

As for the CW sidetone.... is the MON switch pressed in?

Gary, this is very interesting. Is this also the reason that the NB
works on SSB and CW, but produces annoying popping sounds on AM and FM,
and also on very strong SSB signals? Did your mod fix that problem?

I have ordered but not yet received the service manual, so I cannot
answer this for myself yet. I wonder if they fixed this on MKII, or if
they simply programed the radio to turn off the NB automatically when
one switches to AM, FM and WFM. Even that would be an improvement.

5549. HD73 Info needed

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-09 00:00:00 UTC
From: Tracy Hooker <thooker@psl.nmsu.edu>
Message-ID: <339C1399.5227@psl.nmsu.edu>
Source record: 173366

I have an HD73 in good condition, however, the power transformer burned up, and I don't have any manual or schematic. I tried a 25v center tapped transformer, but I guess it did not have enough 'poop' because the light dimmed and the meter went to zero when the rotor was moved. So, I need input! Has anybody replaced the transformer for one that is commercially available? What voltage and current was it?

PS I called Norms rotor service, and they do have a replacement, but it was VERY expensive!

Thanks,
Tracy

>
> It's irritating when you miss the first couple of characters of a
> repeater ID because your HT is still transmitting when you let up

Part of the delay is a case of WAD (working as designed). The HYX-404
(and -202) are 2 of only a very small handfull of radios that
PROPERLY encode CTCSS. The full proper CTCSS encode function requires
that the radio perform a "reverse burst" when the PTT is released.
What this means is that when you release the PTT, the transmitter
stays actvated for about 100ms during which time the radio reverses
the phase of the CTCSS tone 180 degrees, resulting in the immediate
quieting of the remote receiver (also known as a squelch tail
eliminator)
(no, the squelch tail is not the repeater hang time of 1-3 seconds, but
the
burst of noise from the receiver). After the CTCSS tone has reversed
phase,
the transmitter drops out.

Motorola, GE and RCA all implemented reverse burst in their equipment to
elimnate the irritating noise burst, but I am not sure if (in this era
of
cost reduction) they still do. Most "rice box" radio companies never did
this, not even in their commercial equipment.

The right mod to rx from 153 - 200 Mhz is on the Internet
that remove a cap, this is not endosed by Icom , but it works.
A ham in Finland posted it on the internet.

Also, If you read your manual , the 706 spec's are only
guaranteed in the HAM band and the manufacturer reserves the
right to improve the design at his discretion.

The original 706 with the cap mod can improve the rx ability,
the only drawback is that Local oscillator leakage from the
oscillator can leak out and radiate out the VHF port of the
antenna, which can cause interference to other radio's ,TV's,
etc.

This is why Icom will not endorse the mod, since the radio will
then not meet part 15 of interference to other receiving devices.

This means, if you do the mod, Icom will not stand by the product!!

Let the user beware!

It is a pain in the butt mostly, but can be done with a thin, sharp edge to pry open the edges. I just saw, I think on this group, someone suggesting you stick the battery in the freezer and then bring it out frozen and smack it on a surface to break the glue that Yaesu uses to prevent us from reusing the case (silly Yaesu, they even put it over the batteries sometimes making it very difficult for us with no benefit that I can see....). Check the archives of this list.

I just pry them open, but it can take a half hour or more to do it neatly.

Altavista search for winradio reveals quite a few sites.
I am not aware of any 3rd part apps - I was about to write one myself
(a spectrum analyzer) but the company put up one before
I got around to do it. They provide a good software developers
kit, but as their software is really good, I feel little incentive to
write my own, especially as they keep improving it all the time
and the upgrades are free.

I have had mine for 8 months or so and in that time got three major
upgrades, each time with new features, most recently 2 weeks ago (with
the spectrum analyzer).

Hope this helps,
Chris

I disagree - I have one myself!

Measured sensitivity on VHF/UHF and it s about 0.35 uV (much better
than the nominal 1uV specified).

That's better or at least comparable with scanners costing more.
Granted, it's not that good on shortwaves, but then again, no
wide-band scanner is no matter what the brandname.

Cheers,
Chris

I have one and love it. It is much more flexible than a dedicated
receiver. But you need to try it to exactly see what I mean - you can
donwload the software from their web site http://www.winradio.com.
My desk is now too cluttered for a dedicated radio, and since I sit
behind my PC most of the time, I now work with Winradio almost
exclusively, running in the background even when I do other things on
my PC. My primary interest is in VHF/UHF scanning.

>the card is very cheap, so
>its hard to beleive it will compare favourable.

Of course it's cheap!
It's because you already have half of the radio at home:

* the box
* the display (including a CRT for a spectrum analyzer!)
* the front panel (keyboard)
* the storage for memories (hard disk)
* plus a powerful CPU to run it all

I am talking of course about your computer....

:-)

Cheers,
Chris

I have for sale the following items:

(1) Kenwood TS-870S transceiver. Has the optional SO-2 TXCO unit.
This transceiver is only 1-1/2 years old. The unit has been packed in
its original carton with all manuals and accessories since December
of 1996. Asking $1725.00 + UPS

(2) Kenwood SP-41 mobile speakers. Asking $25.00 each or both for
$45.00 + UPS

(1) Icom IC-22A transceiver. No microphone. Used on packet only.
Has ComSpec SS-32P installed. Copy of manual on IC-22A, and
have spec sheet for ComSpec. Asking $85.00 + UPS

(1) Mirage B-108 Amplifier. With manual. Asking $95.00 + UPS

(1) DRSI DPK-2 TNC. Same as TNC-2. With manual and software.
Unit is only 1 year old. Asking $50.00 + UPS

(1) DRSI Type 2 packet board. This is the best board for packet.
Has two 1200 baud ports. Also has two DCD-3105 state machines
to enable open squelch operation. Have manuals and software. No
better unit on the market. Asking $135.00 + UPS

(1) Telex Contester headset. With manual, asking $50.00 + UPS

(1) Drake TV-3300 low pass filter. Asking $20.00 + UPS

(2) Daiwa CS-201 2-position antenna switches. Asking $15.00 each,
or both for $25.00 + UPS

(1) Alpha Delta Transi Trap with R-T element. Will handle 200 watts.
Unit has never been used. Asking $20.00 + UPS

All items are in excellent to mint condition. Call (972) 962-3595
between 10 AM and 2 PM weekdays, or after 10 AM on weekends.
Thanks es 73

The object of the game is to come up with the number "10". If it gives
you the number "3" press "7" then the orange function button. It keeps
going until you win or until you miss enough that the display "fills
up".

> these radios.

Fred-

Transmit crystals for the HR-2 and HR-2A (6 MHz), are different from those for the HR-2B (8 MHz). Since there are also slight internal differences between the HR-2 and HR-2A, you need to be more specific about which one you have!

I had the HR-2A back in the 70s. At the time, I thought it was a great radio, but later realized it had problems. For example, it had a tendency to generate spurious signals when the antenna's SWR was high. The spurious signals were usually outside the antenna's range, so their SWR was even higher, making the problem worse! Naturally, the problem didn't show up on a test bench when using a resistive load.

Another common problem seemed to be channel switch contacts that were intermittent. At the time, it was possible to order replacement wafers from Regency, and I wore out two sets.

The HR-2 and HR-2A receiver IF filters were intended for use with 30 KHz channel spacing. The HR-2B had a 15 KHz filter, but not as good as the commercial filter. A commercial filter was available in a mod-kit (MA-50?). Unfortunately, the receiver had no adjustment for crystal frequency, and the commercial filter was very unforgiving.

Today, the Regency company has changed. The scanner portion was sold to Uniden, and the commercial two-way radio portion became RELM Communications of Melbourne, Florida. Perhaps some service data may still be available for the Regency BTH model, which was the commercial version of the HR-2B. I think the BTH transmit crystal was different still (12 MHz?).

5566. FT-5100, WX Band+440=FEEDBACK

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-09 00:00:00 UTC
From: jzawodny@pcocd2.intel.com
Message-ID: <5nhu9sbga1@news.fm.intel.com>
Source record: 173383

Okay, here is the situation... Driving cross country, I had
plenty of time to test this out, and it was not a local phenomena.

Tune the 5100 VHF side to the weather bands, 162.4-162.550 and set the sub
band to scanning on the UHF side. Every time through the sub-band limit scans,
scanning repeater segments in the 440-450 ballpark, there is usually one
frequency (and it depeds on which weather channel you are tuned to) that
will break the squelch. Now, if you switch over, and stop the scan, then turn
it up ever so slightly, what you hear is not any sort of signal, it is
"feedback" just like you would hear in a PA system. I turned the squelch
all the way down on this channel, but couldn;t hear any atmospheric/other
noise, just this sqeal. I know it was nothing, because even out in the middle
of Nevada and Wyoming, I experienced this when there was no-one within
radio-shot.

Is this a documented bug, just my radio, just my setup, ??????

Thanks in advance for the net.wisdom.

Interesting, As a Novice you can't operate on any off the bands the radio transmits on anyway. I would suggest just taking the tech test and be done with it. Why go to all the trouble off lowering the power levels on bands you can't operate on.

Just a thought.

You have to punch in the number that when added to the number displayed
equals 10. Then hit the function key.
Example, if 4 starts scrolling across, punch 6 then function.
Have fun-

Stan,
I have had my DX-70 for about a year. No problems with it, I took a lightning strike close by and had to have it repaired by factory. (It was reasonable). I like the little unit and get excellent audio reports. The noise blanker is mostly ineffective. I do use my DX-70 mobile on long trips, but mostly as a base station with a 20 amp supply.
Hope this helps some, I have heard of some problems with the Kenwood TS 50. All this and I am a Kenwood fan having had many of their HF, VHF, and UHF units.

The only thing to watch for is that most UPSs are designed for full power
only as long as their batteries last. The transformer and/or power bridge
may overheat if run on external DC power.

You will have to derate the max continuous output power.

>>I have some motorola sport 7 radios. I would like to know
>>if there is anyway to hop them up to get a little more range.

You're discovering things you should have known before acquiring
these little gems.

No - the antenna is fixed - per the FCC rules establishing the
Family Radio Service.

No - you are limited to .5 W ERP - per FCC rules.

What do you need radios for? What activities or events?

Clint Bradford, KE6LCS/KAF3359 909.681.6210 Voice sysop@atdbbs.com

But lets face it none of these shortie antennas are going to
out perform a nice long wip on an FT50.

Too bad no one is making a nice wip for an FT-50. They would be an instant
best seller. Its one of the major short commings on the radio.

The radio would perform 2 or 3 times better with nothing more
than a better antenna. There is no more effective or less expensive
improvemnet one could make.

Yet no antenna. Only weird BNC adaption gizmo.

The cash is burning a hole in my pocket for a decent antenna.

Mark,

Check out the Northwest Saturday Morning Swap Net. We meet each saturday morning at 9 AM local (145.27 in PDX, 145.33 in Seat). There have been lots of Rohn stuff listed lately.

Additionally, I post the net results to our website each week. I recomend that you check it out. I don't know if it's still available, but this week, a ham listed a straight section and top section for "$40 or whatever I can get this week, I'm moving". He was located in gresham.

the address is: http://www.chatlink.com/~rickt/swap.htm

If that doesn't work out, get back to me. I have some misc. 25G stuff coming out of an estate that I'm helping with.

John,

These things definately have tube finals, but the club has lots of
spares and they aren't interested in replacing the rigs at this time.

The stamps on one of the boards shows a "built" date of Dec, '72, so
you're in the right ballpark.

If you happen to have any of that old literature laying around, it would
be greatly appreciated.

Thanks again,

Ron, N7TAW

5605. ICOM 706 MK II DSP ?????

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-10 00:00:00 UTC
From: hershman <hershman@ix.netcom.com>
Message-ID: <339DFFE2.553C@ix.netcom.com>
Source record: 173232

If you just purchased a Icom 706 MK II. Take a look at the LCD Display from an Angle. You will see "DSP" clearly marked but it is not usable. My belief is Icom was going to include audio DSP is this radio but at the last minute scraped it so as to get it to market. The rumor I heard is that a Icom Italy Dealer let the news out about the Icom 706 MK II and the Rumors went out of control. Icom decided to release the IC-706 Mark II earlier than it was supposed to so the DSP feature was left out. To bad. Perhaps next year Icom will come out with a Icom 706 MK III ??? I doubt Icom would have put the LCD with the words "DSP" if they were not planning on it initialy.

This Guy BOB KG7D is the radio repair technician at Amatuer Electronic Supply in Las Vegas . If you have a Amatuer Electronic Supply Catalogue Winter '96/97 His picture is on page 147.

I guess Bob is telling me _not to go to Amatuer Electronic Supply
since they did not pass his Salesperson Evaluation on one occation that
I delt with them.

>The right mod to rx from 153 - 200 Mhz is on the Internet
>that remove a cap, this is not endosed by Icom , but it works.
>A ham in Finland posted it on the internet.

I developed it, and posted it. Others have reposted it many times.
But it is remove one cap, discard it, remove another cap, and
reinstall it piggyback across a third cap. It isn't hard, but it is
SMT rework.

>Also, If you read your manual , the 706 spec's are only
>guaranteed in the HAM band and the manufacturer reserves the
>right to improve the design at his discretion.

True, but they did *advertise* full coverage to 200 MHz (at least until
we started complaining about the state of the emperor's wardrobe).
This mod *delivers* on that advertising promise.

>The original 706 with the cap mod can improve the rx ability,
>the only drawback is that Local oscillator leakage from the
>oscillator can leak out and radiate out the VHF port of the
>antenna, which can cause interference to other radio's ,TV's,
>etc.

Bull! There is more LO leakage through the case and on the
DC power line than there is coming out the antenna connector.
If you even glance at the schematic, you'll see that the filter is
not what suppresses LO radiation in this radio. An Icom America
employee did make this claim, but when pressed to prove it he
backed off.

>This is why Icom will not endorse the mod, since the radio will
>then not meet part 15 of interference to other receiving devices.

The radio's Part 15 certification is voided if *any* RF mods are
done which haven't been tested by a certified lab. That's the way
the certification process works. But Icom has not paid to have the
modified radio tested to see if it still meets Part 15 limits, so they
can't endorse the mod without running afoul of the FCC. But I have
tested it, and it doesn't have more LO radiation after the mod than
before the mod. As amateurs, that's all we have to do. We don't
need certification for our own radios. They only have to meet
good engineering practice, and this mod does.

>This means, if you do the mod, Icom will not stand by the product!!

IMHO what really concerns Icom is that if you muck up the radio (this is SMT rework after all) you might come back at them and demand they fix it if they had blessed the mod. Remember, as with any mod, if you muck it up, you're on your own. No warranty is expressed or implied.

Hi Bob; The Alpha 76 is a terrific Bullet-proof amplifier. If you have found one ingood shape especially a 76PA whic is the three tube model for less than $1,100 you should buy it. The 8874 tube is discontinued from Eimac and are quite expensive to find as new (approx. $300+ each) however, Svetlana is working on a new tube to replace the 8874 which will be available from those of us who are dealers for their tubes. Also Dick Byrd N4UQ in Atlanta is a good source for information and he has a conversion that is superb for the 76 that converts it to 3CX800 tubes.

Regards..... Jack

>
>73 DE KG0HW

I've never used the older 706, but the MKII noise blanker does the job on some impulse noise that I hear at the home QTH. The noise blanker on the DX70 never touched it. I haven't run it mobile yet but based on what I've seen so far, I'd say it's reasonably effective on at least one type of impulse noise. In AM mode, with a reasonably strong signal it will introduce distortion, but you can either select it off, or set it not to come on in AM mode off the main menu.

I can't compare the GAP to the Cushcraft but, I have a GAP Challenger DX that I've been using for 2 1/2 years and I am impressed with it's performance. Went from box to on the air in abt 4 hrs.MFJ antenna analyzer showed abt 1.5 or to 1, or less, on all bands with NO TUNING. You do need 3 - 25 ft. radials but they don't have to be straight, I have a friend that also likes his GAP.

Hello to all in this great hobby. I am soon to become a new member and user within this hobby. I would like to know about 2-meter hand helds. I am intrigued with 2-meter and would like to know more about it. I have a quick question though. Since I am a new comer I am unfamilur with the brand names and the many types of equipment that are out there. I would like to know is there is a reliable, durable, reasonably priced, 5 watt, hand held that would be great for a beginner. Any help on this matter would be greatly appreciated. Thank you for taking the time to read this.

I thought I'd throw this one to the masses, and ask the question. I've been nominated for club president, and I'll be taking the position after our club's June meeting. The club is fairly small (48 members, not even half of which are very active on the radio), and we're located in the northern lower peninsula of Michigan.

Currently, club dues are the only source of income for the club. I'm looking for fresh ideas on how to pull in some cash so we can update our repeater, and accomplish some other things that require some money.

Any and all ideas will be welcomed! Please be specific. For example, instead of "Have a fund raiser.", let me know how YOUR club does it, what kinds of fund raisers do you have, etc. I'd really like to start bringing this club into the 90's, and we need $$ to do that!

Thanks, in advance, for the input. Please email me directly with any responses, in addition to any posts to the newsgroups.

Thanks again, and 73.

A "preamp" boasts your receive signal. In a mobil situation using a
handheld radio it would probably cause more harm than good. Also the
fact that the amp works at the radio end limits its usefulness. To be
of any use the amp should be at the antenna. preamps are of most use
for weak signal work where they are mounted at the antenna to overcome
line loses....73

5624. News on Kachina 505DSP new transceiver

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-10 00:00:00 UTC
From: morel@shani.NET
Message-ID: <01BC75A6.EF3FFBA0@teleport16.shani.net>
Source record: 173281

For those who are still waiting for 505DSP HF new
transceiver brochure from Kachina Communications:

On the 8-pages brochure they are few details not given
on their WEB site.

* The automatic frequency calibration can be made also
from WWW.
* Your computer SoundBlaster card is used also for RX
audio and as an integrated digital record/playback device
with no recording time or slot number limitation.
* The transceiver can be controlled by voice using voice
recognition software.
* Both RF unit and the control head can be remoted from
a 25-75 feet distance.
* The digital "remote control by phone line" feature is using
DVSD modems and will be available at the beggining of 1998.
* The optional antenna tuner is using "fuzzy reasoning" algorithm
and "impedance point interpolation" method with 64 internal
memories.
* The A/D converters are using " sigma-delta " methods.
* The CW signal transmit adjustable waveform feature has
256 steps.
* The CW ring-free DSP filters can be adjusted to 100Hz BW.
* The RX has a selectable syllabic or level sensitive squelch.
* Both channel and band scanning features have a variable rate
option.
* The control head can be internallly mounted into a 5 1/4'' free
bay on your PC or on an external case if your PC is already full.
* The RF unit looks strong with a large heatsink. There are about
9-12 modular professional - looking / RFI- isolated PCBs. On the
antenna tuner module, only the relays are visible, the coils and
the capacitor banks are mounted in a RFI enclosure. On the
front panel they are only a power LED and the RS-232 connector
and can be positioned vertically or horizontally.
* The control head front panel has a power on/off switch, two LEDs,
mike, paddle, key, speaker and phones connectors.
* 2 years warranty, 48hrs turnaround-time on repairs and free
return freight (for USA hams) sounds great ! It will be interesting
if the overseas dealers will offer a similar package. It's still not clear
for me if Kachina will sell directly too or only via dealers.
* For the european hams: they will be present at Friederichshafen
at the end of June. Their german dealer is SSB-Electronics. At
Dayton they had problems demonstrating the rig due to the very
poor indoor antenna used and to terrible Arena noise.

The BIG first question will be of course, how the receiver will perform on our today bands environment .

Enclosed with the envelope was a prelimminary price list :

* 505DSP transceiver (including the RF unit, PC internal installed control head, hand mike, installation software, Quick reference chart and interfacing cables) : $1995.00
* Optional 505AT internal antenna tuner: $239.00
* Mounting bracket, $40.00
* Shock mounts for mobile operations : $19.00
* Optional 25ft cable for control head: $39.00
* Optional 75ft cable for control head: $69.00
* Optional 25ft RS-232 cable: $29.00
* Optional 75ft RS-232 cable: $39.00

I'm not so sure, but I understand that the included interfacing cables are 8ft long.

The brochure is very nice but many important specifications are still missing. I think that they are still keeping some critical specs for July/August. I heard also some rumors that the ARRL product review will appear on November issue of QST.

In the mean time, the sales peoples and applications engineers at Kachina were very cooperative and responsive to my endless questions, hi, hi.

Source record: 173283

The MCX1000 was designed for motorcycle use or where mounting space is scarce. It comes in both a dash mount and a remote mount version and is made for Motorola in Europe (Germany, I think). Software is required for pro-
gramming and is part #RVN-4011, as well as a RIB (radio interface box) and a programming cable (can be obtained from Motorola or Polaris Industries in
Ga.). The programming cable does indeed plug into the RJ11 connector in the
front panel which is the microphone jack as well. MCX1000s are either 56 mode or 128 mode depending on the EEPROM inside. It is an excellent radio with wide band capability and is available in VHF and UHF (no low-band). Hope this is helpful.

From: Ack Thhpt! <ack@remove.this.to.reply.netins.net>
Message-ID: <339D6F03.47E1@remove.this.to.reply.netins.net>
Source record: 173285

Here's some more info on the GRE GINA radio modems. I got a chance to do some looking at them yesterday and here's what I found.

Despite what the manuals say, all 9 pins of the GINA DB9 connector are connected and probably used.

Pin Function Action

1 DCD Carrier detect, tracks the radio signal

2 RxD Receive data

3 TxD Transmit Data

4 DTR Data Terminal Ready. Seems to be ignored by GINA

5 GND Signal Ground

6 DSR Data Set Ready from GINA. Always true?

7 RTS Request To Send. Keys GINA into Transmit mode

8 CTS Clear To Send, Returned when GINA ready to Tx

9 RI Ring Indicator? Unused?

Using RTS/CTS to key the radio I have been able to do 19200 baud transfers of over 200K between 2 units with no errors.

Note: I am not affiliated in any way with GRE, their suppliers, their distributors, etc, etc. I just bought the #)@&*^*%!! things and have to install them and make them work.

If you can't find any local or net help, look up "Norm's Rotor Service" on the
Web. Great guy, great service. He rebuilds and sells rotors and control heads
for all kinds of applications. I sent in my Ham 3 for rebuild and after
rebuilding it I got to use the trade-in price to upgrade to a rebuilt Ham 4.
My guess is there isn't much he doesn't know about rotors.

I am looking for a used Phasor or other system for electrically steerable vertical array. Vaguely recall an article in Ham Radio magazine and will appreciate info on which issue if anyone has a better memory than me. I can always relay switch a bunch of transmission line segments but wanted to explore other options before putting anything together. If someone has an old system gathering dust that is available for swap, by all means, write and let me know. Primary interest is for 40m band but 20, 30, and 80 are of interest too.

Message-ID: <01bc75ab$d2c03300$69c1728f@LMTAS_Net.lmtas.lmco.com>
Source record: 173293

Does anyone know what the deal is on the FT-5200?

My wife has an FT-5100, and we are quite satisfied with it, so far. But, Yeasu appears to ignore the existence of the FT-5200 in their catalogs. At least for the last year, I think I've only seen one mention in Yeasu literature about the 5200.

I like the remotability of the 5200, and I have seen a good closeout price on them, but I don't want to get stuck with a turkey.

Won't work, ever. The connector is a different size a location.

>
>I also have a few questions about the VX-10
>
>1. Will it Tx on the 2m band (can it be used for 2m)

Yes.

>
>2.Will the display show actuall freqs or just channell #'s

The display will show what ever you program it to display. The two choices
are "chan-xx" or a programmed name. If you want it to display the
frequency, you have to program it as a name. The name can be up to 8
characters.

>
>3.Will the ADMS softwarework with it or does it come with it's own

I'm looking to keep an old RACAL 6790 HF receiver running into the next millenium and could use some parts. The older 6790 is preferred, but the more common (and more recent) 6790/GM utilizes most of the same components. Let me know what you have. The cheaper the better, so I'm not really interested in functional radios.

I'm no expert, but I'll take a crack at it. I believe that the antenna is rated to dissipate that much power before it heats up too much. It's possible that the SWR may be too high at higher power levels. I believe though, because it's a dual-bander, there are phasing coils in the base to give it the dual band ability. Exceeding the power rating given may burn out the coil.......hope I'm right !

Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.radio.amateur.equipment

The Holmdel Amateur Radio Club is selling it's old
HRO-60 and Eddystone 770R Receivers
in order to raise money for new equipment. The
National comes with 10 coil sets (2 A sets, and
1 each of B, C, D, E, F, G, H, and J). Both receivers
power up and produce some audio output (static),
but probably need a bit or work to get them on the air again.
They have sat virtually unused for
probably 2 decades or so! They are cosmetically in
excellent condition. Our club is the original
owner of these rigs. We have the manuals/schematics
for the HRO-60, but haven't been able
to locate them for the Eddystone.

We are opening the sale up to a bidding process.
If you are interested, please send me e-mail or
call 908-949-0664 with your offer (shipping additional --
equipment located in Monmouth County NJ).
We would like to get at least $500 for the pair.

Joe Levantino
Lucent Technologies
Holmdel NJ

Got the 706 Mark II,
Saw major improvements in the
0.03-200Mhz rx, especially the
60-200Mhz rx.

S meter now works on FM broadcast

The spectrum scope has a .1Mhz position

The noise blanker does not distort SSB signals
like it did before.

Source record: 173312

If you look at the LCD display of the new Icom 706 MK II you will see the Lettering DSP. Is there DSP in the RADIO. Was this DSP left out because they were in a rush to get it to market. I guess it will be included in the ICOM 706 MK III version.

This isn't usually true. A UPS which can sustain 200 watts for 10 minutes
can generally sustain it indefinitely. That's because 10 minutes is more than
long enough to reach thermal equilibrium. You do have to be careful when
looking at the ratings for the UPS, however. There is a peak surge rating,
and a sustained rating. The former is only valid for momentary starting
demands.

Hello all,

I'm looking for the "Radio Amateurs PREFIX MAP of the WORLD" which was once published by Radio Amateur Callbook, Inc.

They told me it's no longer produced, but I would like to find a copy in new, mint, or excellent condition. Also looking for a copy of "The Radio Amatuers DX GUIDE" in similar condition.

Please send me email with price and condition. Thanks.

>and also on very strong SSB signals? Did your mod fix that problem?

The problem on strong signals is inherent to the blanker design. There is an
adjustment in the service manual you can perform to minimize this, but it is
a tradeoff between blanker threshold and clipping on strong signals. You can
have really good blanking, or you can have clean operation on strong signals,
but you can't have both. Some radios offer a front panel control to let you
adjust this on the fly. Unfortunately, this radio doesn't.

I read about the upcoming balloon flight where Amateur Radio Equipment would be tethered to the balloon.

The entire message did not come through and for some reason my messages to reply are not accepted either.

I was wondering if anyone knew the DATE the flight is supposed to take place.

It is apparently going to be around Indianapolis or somewhere near there in Indiana. I checked some of the calls and that appears to be where most everyone involved with this project is from.

If I could get the date of liftoff and the approximate time of liftoff, I will listen for it. I know they said the net started at 1145 UTC, but I don't know when the actual liftoff will take place.

Wasn't the first unit listed an Exec I (not the Exec II) that used
tubes for the driver and final (rest of the radio is solid state)? I
used to have RG56TAS66 models on high band that were Exec I units
(from the mid to late 60s I think).

I think Peter is on the other side of the pond and has a radio capable
of 1750 hz. Now he would like it to generate sub-audible CTCSS tones.
He probably needs a board to do that.

5684. HELP with Motorola Syntrx+ cable....

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-10 00:00:00 UTC
From: vk3jma@ozemail.COM.AU
Message-ID: <1.5.4.16.19970610230052.2dbf9732@ozemail.com.au>
Source record: 173417

Hello,

Not sure if this is the right place to ask but who knows.

I have a VHF Hi Band Motorola SYNTRX Plus radio.

These have a EEPROM and are programmed via a cable from PC
to handset plug.

Mine is up and running on 2m no problems, however, as I wrote the
"script" for the software, there where a few errors in it, such as wrong
freq for our local CW pratice beacon. Also I want to play with the
radio's scanning and CTCSS options that I know it has.

However, the origional source for the first programming is not too easy
to get to these days so as I have the software and only need either,

1. a cable (for ham usage the price motorola ask is just too expensive)

2. cable data so as one might be duplicated.

If you can help in any way it would be greatly appreciated.

regards

Mark

Message-ID: <01bc755c$41a1e020$3908aacf@viking.add-inc.com>
Source record: 173418

Any idea how to delete a frequency programed into one of the memories? I can reprogram any memory with a new frequency but I don't know how to simply delete a frequency from memory and it's not in the manual. I want to do this since I scan programed memories and if I am no longer using a frequency I would rather just delete it than have to program the HT to ignore that memory. 73's Eric KB9QAI No.Spam@add-inc.com

5687. 10 KW Collins Shortwave Broadcast Transmitters For Sale

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-10 00:00:00 UTC
From: superclan@usa.net
Message-ID: <339cf2de.5330104@news.euro.net>
Source record: 173420

There are 3 Collins10 KW shortwave broadcast transmitters
immediately available. They are currently in western Europe. They
were manufactured in 1982 and very well maintained. The modell is
208 U 10, and can broadcast in AM,CW and SSB. The main valve
is the 4CX10.000 . Frequency range is 2-30 Mhz.
Price for each transmitter (with inbuilt power supply and an
electricity regulator) is 17.000 German Marks (roughly 9,000 US
dollars)

In addition to this, there are 3 SIEMENS 10 Kilowatt transmitters
available. They were used for ship to shore communications. The
Siemens have Telefunken exciters with digital frequency readout.
These transmitters can also broadcast in AM,CW and in SSB.
The Telefunken exciters were manufactured in 1985, and the
Siemens 10 KW boosters were built in 1980, but only in 1989
they came in use, and therefore have only been used in the last 8
years. Included in the price of this Siemens/Telefunken transmitter
is a 3 phase power supply, a double external ventilator and an
airfiltering system. The main valve for the Siemens is the RS 2012.
Frequency reach is 1.5 to 30 Mhz. Price is 10.000 German Marks.

All transmitters come with all the books.

> 73, Ed
>
> --
> Ed Jensen, K5ED, El Paso, TX (ae110@rgfn.epcc.edu)

Suspect the problem is that the frequency he is trying to get down to also has a negative offset assigned to it. The radio will not go out of band. Set the offset to no offset (the + or - vanishes from the display), then try again. it should go right down to 144.00. You are seeing a programming problem, not a modification problem.

Note: There are absolutely NO mods that can be done to the HTX202 to extend frequency range. It is a 2-metre ham band allocation radio only.

BTW, I have two of them, beat the hell outta them on camping trips,Skywarn, etc. It's really a good radio if you want decent performance on 2 meters. If I need to receive out of band, I use some duct tape to stick a scanner to it.

From: Rich Abbot <abbot@pez.bell-labs.com>
Message-ID: <339F1D32.27A3@pez.bell-labs.com>
Source record: 173188

Howdy,

At a recent hamfest I picked up an old iambic paddle manufactured by the Nye company. It is black metal with two elongated black plastic paddle handles, protruding from the front of the key about 3" or so.

The paddle is built tough and it still works well, although it takes more oomph than the Bencher I'm used to.

I'm wondering about the history of this item, as it looks pretty old. Can anyone on the 'group tell me how old it is, whether it was a popular item, etc.?

Thanks & 73,

Rich, WB2MBM

Hi Jim,
For HF nets go to URL:
http://pw2.netcom.com/~ac6v/pagep.html

For Collins Nets goto URL:
http://pw2.netcom.com/~ac6v/pageak.html

There may be some more listed on the HF Nets Page -- I'll let u find
them.

Also 5 more Collins clickables at URL:
http://pw2.netcom.com/~ac6v/pagex.html

I've got a 9406 and just finally got my yagi up in the air this past weekend. With the QSO party coming up in a couple of days, I have one question about the 9406. What would be the best way to hook a frequency counter into the 9406? Answers can be sent to wysockig@buffnet.net or posted here. Thanks in advance.

5720. Re: Need mod for HTX202 to cover all of 2m

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-11 00:00:00 UTC
From: wdr@world.std.com
Message-ID: <EBMLov.3oI@world.std.com>
Source record: 173203

In article <5nmghd$p16@news.epcc.edu>, Ed E Jensen <ae110@rgfn.epcc.edu> wrote:

> His RS 2m mobile rig (I think the
> number is HTX202)

My answer presumes your designation HTX-202 correct, as many people do use the handy-talkie HTX-202 as a mobile, with external antenna, speaker, mike, and cigar-lighter supply, sometimes with an amp too. The radshack mobiles that won't fit into your pocket when you park, however, are numbered HTX-212 (older) and HTX-242 (newer). My diagnosis is possibly correct on the other models, and comments on why your friend probably shouldn't care are correct for any make & model.

> only goes down to 144.6MHz. If anyone knows how to
> modify it to go down to 144.0, please reply to ae110@rgfn.epcc.edu.

Mod? No mod needed, if it's the HTX-202. Read the manual. His problem is it's in DUPLEX mode, shift-down, and wants to transmit 0.6MHz below the frequency displayed. It won't do THAT, since that would transmit below 144.000. It likely will illegally transmit FM below 144.100 in the CW section, but since you COULD plug a straight key with adapter into the MIC jack, they'll trust us not to use the MIC that far down.

(If it's not the HTX-202, but the 212 or 242, maybe it won't go lower than FM goes, I haven't checked their specs; you can, at http://support.tandy.com/support_electronics/3157.html . No reason it should, not being an all-mode, unless you've got older "linear translator" technology repeaters in your county.)

Note that most of the space between 144.000 and 144.600 is CW/SSB per bandplan so although it is technically LEGAL to operate FM above 144.100, FM will only be welcome in the portions not used for DX CW/SSB, wherein it could constitute intentional interference. (and listen-before-talk to avoid that would require a 2m CW/SSB receiver!)

Note especially FM (and even SSB) is not even lawful from 144.0-144.1, which the FCC reserves for CW Only. (So No-Code Techs have lawful access to two CW-only subbands, on 2m and 6m. Weird.)

Interleaving the ARRL Bandplan under the FCC regs:
FCC (http://www.arrl.org/field/regulations/allocate.html#2)
ARRL (http://www.arrl.org/field/regulations/bandplan.html#2m)
144.0-144.1 MHz: CW Only [FCC Part 97] All Amateurs except Novices
144.00-144.05 EME (CW) *
144.05-144.10 General CW and weak signals *
144.1-148.0 MHz: CW, Phone, Image, MCW, RTTY/Data [FCC Part 97] ditto
144.10-144.20 EME and weak-signal SSB

144.200 National (WS) calling frequency
144.200-144.275 General SSB operation
144.275-144.300 Propagation beacons
144.30-144.50 New OSCAR subband **
144.50-144.60 Linear translator inputs ***

* Mandatory CW only, per FCC

** If there's a satellite up that's listening FM in this OSCAR Subband,
(check with www.amsat.org), then 144.30-144.50 is ok, otherwise FM there
would be intentional interference.

*** If you have a local linear translator in 144.50-144.60, great; if not,
local frequency coordinators may have an option, and one should follow
local practice.

> I am posting this for a friend of mine.

I hope your friend has the appropriate license, manuals, and bill-of-sale
for his radio. The previous posting ae110@rgfn.epcc.edu was signed
"Ed, K5ED" but that's Charles E. Jensen (probably C. Ed to his friends?),
of El Passo. There is no Ed E Jensen in the online callbook. Perhaps
"Ed E Jensen" is the son and sharing email with his Dad?

> :That's 500mW ERP.
> Chalk up another one for Australia. We have a UHF CB radio service with
> 40 channels and 5 watts max power, with repeaters. It's on 477 Mhz.

Nope, we've had UHF CB for years up here too. Just when 11m CB got
dis-regulated, they changed the names of the other services to protect
the innocent. Originally there were the CB A,B,C,D services.
Dont' ask me which was which... the way it is NOW is, as best I can recall,
as follows:

27MHz/11m "The Chicken Band", home of all those trucker/good buddy movies,
is still called Citizens' Band. (A number of good amateur radio operators
have come in from there, I can think of one who when from C.B. to Amateur
Extra Class in less than a year, and she's a fine traffic handler on
our message nets.)

49MHz unlicensed consumer stuff & remote control

460MHz-ish "General Mobile Radio Service" requires a license _per family_,
but is permitted repeaters, and has real power allocations.

and another I'm forgetting...

FRS, the _new_ Family radio service, shares its 7 channels with the GMRS's
simplex channels, but FRS is restricted to lower power. Apparently GMRS
and FRS users on the same frequency are prohibited from contacting each
other, though, which makes just a much sense as prohibiting
cross-state-border contacts on 11m. It's just an unlicensed "lite" option
on GMRS. The GMRS folks are a little peeved, but the low-power simplex
only shouldn't bother them; the FRS folks may get stepped on by GMRS simplex
QSOs that can't hear them, but hey, that's the price of cheap gear on a
secondary allocation.

Suggestion: if discussing comparitive citizens band services further,
move the discussion somewhere where folks would care? (rec.radio.cb,
rec.radio.amateur.policy, I don't know?) I've set Followup-to: none
to encourage thinking about it...

5722. News on Kachina 505DSP new transceiver

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-11 00:00:00 UTC
From: morel@shani.NET
Message-ID: <01BC7609.719B07E0@teleport22.shani.net>
Source record: 173247

For those who are still waiting for 505DSP HF new
transceiver brochure from Kachina Communications:

On the 8-pages brochure they are few details not given
on their WEB site.

* The automatic frequency calibration can be made also
from WWW.
* Your computer SoundBlaster card is used also for RX
audio and as an integrated digital record/playback device
with no recording time or slot number limitation.
* The transceiver can be controlled by voice using voice
recognition software.
* Both RF unit and the control head can be remoted from
a 25-75 feet distance.
* The digital "remote control by phone line" feature is using
DVSD modems and will be available at the beggining of 1998.
* The optional antenna tuner is using "fuzzy reasoning" algorithm
and "impedance point interpolation" method with 64 internal
memories.
* The A/D converters are using " sigma-delta " methods.
* The CW signal transmit adjustable waveform feature has
256 steps.
* The CW ring-free DSP filters can be adjusted to 100Hz BW.
* The RX has a selectable syllabic or level sensitive squelch.
* Both channel and band scanning features have a variable rate
option.
* The control head can be internallly mounted into a 5 1/4'' free
bay on your PC or on an external case if your PC is already full.
* The RF unit looks strong with a large heatsink. There are about
9-12 modular professional - looking / RFI- isolated PCBs. On the
antenna tuner module, only the relays are visible, the coils and
the capacitor banks are mounted in a RFI enclosure. On the
front panel they are only a power LED and the RS-232 connector
and can be positioned vertically or horizontally.
* The control head front panel has a power on/off switch, two LEDs,
mike, paddle, key, speaker and phones connectors.
* 2 years warranty, 48hrs turnaround-time on repairs and free
return freight (for USA hams) sounds great ! It will be interesting
if the overseas dealers will offer a similar package. It's still not clear
for me if Kachina will sell directly too or only via dealers.
* For the european hams: they will be present at Friederichshafen
at the end of June. Their german dealer is SSB-Electronics. At
Dayton they had problems demonstrating the rig due to the very
poor indoor antenna used and to terrible Arena noise.

The BIG first question will be of course, how the receiver will perform on our today bands environment .

Enclosed with the envelope was a prelimminary price list :

* 505DSP transceiver (including the RF unit, PC internal installed control head, hand mike, installation software, Quick reference chart and interfacing cables) : $1995.00
* Optional 505AT internal antenna tuner: $239.00
* Mounting bracket, $40.00
* Shock mounts for mobile operations : $19.00
* Optional 25ft cable for control head: $39.00
* Optional 75ft cable for control head: $69.00
* Optional 25ft RS-232 cable: $29.00
* Optional 75ft RS-232 cable: $39.00

I'm not so sure, but I understand that the included interfacing cables are 8ft long.

The brochure is very nice but many important specifications are still missing. I think that they are still keeping some critical specs for July/August. I heard also some rumors that the ARRL product review will appear on November issue of QST.

In the mean time, the sales peoples and applications engineers at Kachina were very cooperative and responsive to my endless questions, hi, hi.

5726. Re: WHo makes an 1.25meter Mobile.?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-11 00:00:00 UTC
From: barryoXX@fastlink.com.au
Message-ID: <339e22bb.14056950@news.fastlink.com.au>
Source record: 173251

Now that would be interesting. A mobile with one and a quarter meters. I guess you could make one by taking two old meters and some string. Cut one of the meters into four parts and discard three of the parts. Join the one meter and the quarter of a meter with the string and hang it from the ceiling. Voila! A 1.25 meter mobile. Now, if you want a 1.25 metre mobile radio that's quite differant.

The 735 has the RTTY label on the LCD screen and NO RTTY Mode is
available in the 735. The 751A had an extra digit but you can not
enable it. Many LCD displays have more labels available than are
used.

Hi there
I have for sale a Yaesu FT-50RH with the FNB-41 battery that gives 5 watts output. I also have the SMA to BNC adapter to connect a regular antenna and the ADMS 1C software for Windows. The radio is 1 month old and on warranty for a full year. The value of that equipment is about $525.00 Canadian and I am asking $350.00 Canadian or $250.00 U.S. I would prefer to sell in the Montreal area but would consider other offers. I think the warranty would not be in force in the U.S. so caveat emptor!

Steve,

Is being such a jerk an inborn talent or do you have to work hard at
it?

Lots of us know who Bob Kline is, and more than a few of us know him personally. So what if he works at AES, he didn't mention that in his post, nor did he post from the AES server. So why do you bring his employer to the table? To show every one how clever you are?

What Bob has to say from his private server has nothing to do with where he works any more than my opinion of your style has anything to do with where I work. Oh and BTW the Las Vegas store meets the criteria set forth in Bob's original post as do the other AES stores I have been to. You might consider that if you were ignored or whatever it was a result of your attitude more than as a result of poor sales staff at the business you visited.

From: donrm@sr.hp.com
Message-ID: <5npo52$bca@canyon.sr.hp.com>
Source record: 173080

Hi - I'm interested in a 144/450 dual band handi-scratchi. Since Radio Shack has recalled their dualbander, this looks like the next best radio for the price. Anyone have one? Any bad points?

HRO says they aren't going to sell the low power version any longer as the only difference is the battery. True? I prefer a 7.2 Volt battery system as all my other stuff (smartcharger, cellphone, etc.) operates on this voltage. Guess I'll buy from AES.

Comments appreciated.

Bob,
The Old SB-220 can be loaded up to 900-1Kw output. To adjust gg
Amplifier apply drive and adjust Plate Tune and Load for Maximum power
output. When that is done check Plate and grid current to be within
range and adjust drive up or down.

From: Joe Giacobello <k2xx@concentric.net>
Message-ID: <33A0E2D4.4DE6@concentric.net>
Source record: 173085

I had a DX70T last year. It failed on me after a lightning storm in Siena, Italy. When I got home I sent it to Alinco for service, and they reported that a band pass filter had failed. I complained that that kind of failure was not likely to have been caused by lightning, and they agreed to repair it under warranty.

Three months later, at home this time, I suffered a nearby lightning strike which took out the DX70T and a TS850. The TS850 was repaired although the ATU had to be replaced. The DX70T was declared irreparable by the Alinco Service Center.

Based on your experience and my two incidents, it sounds like the DX70T may be unusually susceptible to EMP failure.

Yeah, you missed something. We're talking about using a UPS in a
vehicle where it has vehicle power to draw upon. Hence the battery
won't run down as long as the engine is running.

>Sheesh.

Sheesh yourself. :-)

5761. What radio has the best noise elimination system?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-12 00:00:00 UTC
From: frohro@wwc.edu
Message-ID: <frohro-1206972240180001@10.0.2.15>
Source record: 173087

I'm wondering if someone who is lucky enough to try out a lot of radios could comment on the receiver with the best noise elimination system. I am plagued with several sources of power line noise, some "sharper" than others. My observations so far have been that my IC-735 far out-performs my Drake R4C, and my Atlas 210X. The Drake has the 4NB, but the Atlas is without noise blanker. The only time I see the S meter at the left stop on any receiver is right after a soaking rain or without an antenna. :(

Thanks,

Rob KL7NA/W7

5762. My Maha NiMH battery experience

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-12 00:00:00 UTC
From: Matt Staroscik <staroscik@sowest.net>
Message-ID: <339F91B5.7D05@sowest.net>
Source record: 173088
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I got a Maha MH-FNB-38 NiMH battery today for my Yaesu FT-51R. It's a 650mAh, 9.6V nickel metal hydride pack, and is basically a clone of the factory Yaesu NiCd pack.

When I got it home, I quick-charged it. It only charged for about 30 minutes before my NC-50 rapid charger said it was full. That's odd, because the factory pack charges for about 1 hour. I started using the radio, but the pack went dead early. Also, the battery checker in the 51 incorrectly identified it as a type 31 battery, even though the voltage looked like a 38 (that is, starting at about 11V).

I emailed Maha earlier today and explained all this to them, and I got mail back tonight at about 10:30. They told me that a NiMH pack that has been in storage for some months may be "asleep" and it should be cycled about 5 times to break it in. While it is "asleep" its charging characteristics will confuse the quick charger and cause it to stop charging early.

While the jury's still out on the battery, the customer service is good. I'll post a follow-up once the battery is broken in. I hope it works out.

Frank,

Don't know much, but a friend in Florida has the Gap. Likes it
very much. No traps. Covers 80 meters.

My brother here in PA has the R-7000. He likes it very much.
The R-7000 mounts on 2" mast; the Titan only 1.5" as they come.

Somebody else may be able to help you more. I want to put up
one, but haven't decided.

73, Larry

Why do you want to use fm down in that portion of the band? 144.000 to
144.100 is cw only 144.100 to 144.300 is ssb.
Mark

Do you have the problem running 100 watts? How about 375 watts?
At 375 watts you only loose 1 S-unit of signal strength.

Source record: 173094

I am having trouble locating the molex plug (power supply side) that plugs into most modern HF transceivers such as the IC-738, Kenwood, ect....

The molex connector has 6 pins.
On the top row of the molex connector the middle terminal is keyed---flat side facing up.
On the bottom row of the molex connector the two end terminals are keyed---flat side facing out.

I have searched and searched but cannot find a good part number nor source of supply.
I refuse to pay 29.95 for a pre-fab power cable with the connector attached (ICOM Price).

Hopefully, some of you folks have had the same problems and can provide an answer for all.

Thanks.

>how old it is, whether it was a popular item, etc.?
>
>Rich, WB2MBM

Hi Rich,

These paddles were originally made by E.F.Johnson, before they sold their key division to William Nye Company back in the 1970s. They are heavy-duty, to be sure! They are not a rare item, to my knowledge. I know they no longer make this paddle, and I think it's been out of production for many years.

Hope this helps! (and I hope I have my dates right!)

Gary,
Maybe Timewave can make a DSP box , that matches the 706 Mark II,
similar to the board that goes into the Yaesu speaker. It's only a
thought.

I think this unit may be the same as the Kenwood R5000 receiver.

You can just buy any flavor of 8251 and a 4040 at a local electronics store or distributor and plug them in. Buying your own costs about $10. Buying it from Kenwood costs about $50.

They don't bother to tell you the part numbers in the Service Manual either (to insure you will buy their kit), just like the 12VDC kits that Icom and Kenwood sell. If you are handy, you can do your own much cheaper.

That's a *very* good question. There's no way I'm hanging a halfwave telescoping 2m whip on a SMA connector. That's an invitation to pull the SMA right out of the case. Even the Comet SMA-3 is ungainly on these small radios. I normally keep the stubby duck on the radio unless I'm in a bad location. Then I may put on the Comet, or hook up an external antenna. The latter is preferred if it doesn't restrict my mobility too much.

5785. Need for "matched" 6JS6C's in Yaesu FT101?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-12 00:00:00 UTC
From: spammers@must.die.com
Message-ID: <wsandersEBoAny.4LH@netcom.com>
Source record: 173144

I'm shopping for a new set of final tubes for the old FT101 and prices vary from $30 to $80. The expensive ones are in "matched" pairs. OK, basically the tubes are connected in parallel, so this makes some sense in terms of sharing the load between the tubes, but is it really necessary?

It would seem necessary if the 6JS6Cs are run as close to their output limits as Yaesu runs the 572B's in the FL2100B amplifier. I guess they designed these units assuming pretty intermittent use.

Thanks,

-wiley KF6IIU wsanders at netcom dot com

Entire thread included intentionally.
If Ray grenier still has anything to do with AES then they still have
the policies they had when the shaft was the orderof the day.

I don't know bob, and my gripe is with AES of michigan, but
they do NOT meet the above criteria.

So there is room for arguement.

I think the posted criteria is a useful thing to see.

keep on "whining" friend, many need to hear it.

I hope I missed something.
The UPS is an Unirruptable Power Supply, having in or arond it
a battery. It is to be rated at its ability to run the power for so
long at some stated power consumption.

If it can run at that rated amount, it does NOT follow that it will
run continuously at that rate. The battery will run down.

Sheesh.

I can recommend the Radio Shack HTX-202 2 meter handheld. I have had
excellent service from this radio. When they're on sale you can get
one for less than $200. No out of band possiblities, but a very tight
front end. (less interference and intermod.)

I am looking for a good, used, reasonably priced 2M repeater complete with duplexers for use in the 144-146 MHz band. Repeater desired should preferably be built using discrete solid state components, not IC's. Also, repeater should have 12VDC power supply only, since reliable AC is not available in repeater's final site.

You will probably exceed the current rating of the loading
coil and burn it out. Then you will get distortion!

Well, it might be useful in an emergency: you take the radio hiking,
and someone is injured, and the regular antenna doesn't have enough
gain to reach anyone even at high power. A half-wave, or even a full
quarter-wave plus "tiger tail" performs much better than the stock
antenna, and might allow you to communicate.

For occasional emergency use, you can be careful enough not to break
the radio's SMA connector.

But if you can carry along an extra collapsible antenna, you can also
carry along the SMA-to-BNC adapter. This lets you use almost any
antenna you want to, and is little extra inconvenience. So I don't
think the lack of a SMA-mount half-wave is a big deal. I can't imagine
routinely using a half-wave on a FT-50.

Hi there
I have for sale a Yaesu FT-50RH with the FNB-41 battery that gives 5 watts output. I also have the SMA to BNC adapter to connect a regular antenna and the ADMS 1C software for Windows. The radio is 1 month old and on warranty for a full year. The value of that equipment is about $525.00 Canadian and I am asking $350.00 Canadian or $250.00 U.S. I would prefer to sell in the Montreal area but would consider other offers. I think the warranty would not be in force in the U.S. so caveat emptor!

Do that. FM is allowed below 144.6 MHz. (If the radio cut off at 144.2 MHz,
you'd have an argument.)

I believe the radio in question is actually the HTX212 mobile rig. If so,
there's a keyboard mod, listed in the manual, to allow operation below
144.6 MHz.

As Tom noted, ferrites on the plug wires probably won't do any good.

Spark plug noise does change with changing engine load. That's because
chamber pressure changes, which changes the characteristics of the
spark discharge. But turning on the lights should have no effect on this.

The injectors receive a varying *width* pulse which operates the solenoids
of the injectors. The current of this pulse has to be sufficient to bang the
solenoid open at the start of injection regardless of injection duration, but
the energy of the pulse has to be greater for longer duration opening of the
injector. So increasing engine load will result in a greater amount of energy
expended by the injector drivers.This shouldn't be sensitive to turning on the
lights either, *except* if the lights and injector currents share a common
length of ground impedance in the return circuit. In other words, unless
there's a ground loop.

Since it is a Chrysler product, and they are notorious for ground loops, I'd look at this. The likely location of the problem is the ground return from the injector control box to the battery negative. That may be via the instrument cluster and dash. Make sure that this is really a low impedance at DC and RF.

I've had all sorts of problems in this area with Chrysler built Jeeps. A quick test for this problem is to turn on your turn signals. If the instrument lights dim in step with the blinker, you've got a poor ground return between the instrument cluster/dash and the battery negative.

The cause is almost always dependence on mating *painted* surfaces to carry the return currents. Chrysler paints before assembly, and that causes all sorts of grounding problems. (The other manufacturers are doing this too now.)

You can blame this on the EPA and their paint solvent regulations which have caused the manufacturers to adopt new painting methods which work better on components rather than on finished autos. That's also why new cars have that orange peel finish instead of the very smooth finish of the older painting methods, IE it is the result of different solvent behavior. On the upside, there's less corrosion in vehicle joints with these painting methods because of better paint coverage.

To amateurs, however, this means we have to pay even more attention to bonding than in the past. Not only must the outer panels be bonded, but the inner structures have to be bonded too.

I am looking for the real extended rx mod for the Icom 2710. The one that opens up the 860 to 890 part of the radio.

Thanks, Jon Cave KK5OR

5809. Key LK-500ZC from C-line??

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-12 00:00:00 UTC
From: radio@copland.udel.edu
Message-ID: <5npoug$4cd$1@copland.udel.edu>
Source record: 173168
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I just inherited an Amp Supply LK-500ZC and wanted to key it with
a C line. To work the amp on QSK, which I've heard may not be so great,
I hook the keyer into the amp and key the tx from there. But the Drake is
negative keying. Easy solution? Worth doing?

Or, should I key the relay from the Drake? From where? Since the tx is
on only on key down, this would be the same as QSK, I guess. If I go into
the relay jack on the amp, would the key-down-only xmit from the Drake
make it go kablooey?

Pardon my ignorance, but hey!

Please e-mail to rgp@hamradio.com.

Tnx, Bob

Patrick,

The fan is a standard 12V fan, and is controlled by a thermal sensor. The heat sink on the back of the 120 is pretty good, and the fan only comes on when it's temp rises to about 130 degrees f.

In four years running a 120 mobile, the fan only came on a couple of times, and those were when the car had been sealed up on a sunny day, and then I tried to run a long test to change antennas (key down for over a minute, ID beginning and end, of course).

Hope it helps,

Ron, N7TAW

From: ham@w3eax.umd.edu
Message-ID: <5nnfak$k95@dailyplanet.wam.umd.edu>
Source record: 173205

1995 Dodge Neon.

Scenario so far:

Tailpipe bonded to frame (2 places)
Antenna mounts bonded to frame
Hood grounded to fender and frame
Trunk grounded to fender and frame
Capacitor from alternator B+ to frame
All under-hood grounds improved by sanding of paint
Not the fuel pump as it's constant pressure
Not the power lead as the noise is gone when ant is disconnected

What I get:

Pulse noise. Varies with engine speed and other factors:

Putting engine under load makes the noise more intense.
Relieving load makes noise basically disappear.
In neutral, the noise is practically nil, independent of
engine speed. Unless it isn't - and when the lights
come on, it goes away!
I'm thinking fuel management system (multi-point injection)
but is it a big enough current to cause such noise?
Also thinking to replace the plugs and wires? They're
only two years old...
Planning to try ferrites on the plug wires, type 43.

Other suggestions? Anyone know any Chrysler engineers?

> This isn't usually true. A UPS which can sustain 200 watts for 10 minutes
> can generally sustain it indefinitely. That's because 10 minutes is more
than
> long enough to reach thermal equilibrium.

10 minutes is fine most of the time for the bridge, but certainly not for
the
transformer.

How much would you be willing to wager on this one? ;)

(hint: I was a design engineer at a major UPS manufacturer)

Seriously, examine the size of the transformer, look at its insulation
grade,
and then figure out how much continuous power it should be able to handle.

A transformer the size of your fist with class B (or sometimes A)
insulation
no way can handle 200 Watts at 60 Hz continuous... also remember how
fast copper's resistance rises with temperature!

All the extended run units we made had a completely different and larger
transformer, larger heatsinks and/or a fan on the mosfet bridge, and other
considerations.

...Peter

P.S., You do testing, don't you? Paste a few thermocouples on the
transformer
of a UPS, hook it up to a BIG 12 or 24 Volt power supply, and find out how
long
it takes to reach equilibrium at full rated load. Don't fry it, though!

Wonder if you could add one of those "Tiger Tails" slipped under the antenna sleeve. This would provide a counterpoise and improve radiation efficiency, while not removing the antenna. Probably would wind up violating the 500mw ERP rule, though.

We're attempting to sell off an extensive stockpile of NOS and used vacuum tubes which has been accumulating since the mid-1930's.

The collection was amassed by a radio enthusiast who, having received certification as a radio techician in his teens, served as a radar tech during WWII, worked for Westinghouse post-war, owned a radio shop during the 50's and 60's, and currently restores vintage radios.

This inventory, of over 800 tube types, includes many rare pieces, all at VERY fair prices. To request a partial stock list, which includes Sweep Tubes and others used in Transmitters, Linear Amps, Audio Equipment, etc. please email:

locoprom@adan.kingston.net

It seems a little strange to me that Yaesu and other companies have not recognized the demand for a normal collapsible wip (like the hot rod) for the
FT-50.

No single accessory will boost the performance of the radio more than a decent full sized collapsible wip for the FT-50! You can easily double or triple the performance for $20-$30 if the antenna was available.

Last time I checked this was the best selling hand held.

Whats the problem. Is an SMA adapter that much trouble?

There seems to be a huge demand for this antenna but no one has come up with one yet.

The slightly improved other antennas that fit the FT-50 like the Comet are all still shrunken antennas that wont perform nearly as well as a nice collapsible half wave. Just make a 1/2 wave wire J-pole and check out the performance and gain over the miserable rubber duck that comes with the radio of the expensive Comet.

Build a better antenna for us and the world will throw money at your feet.

I am well aware of the sma/bnc adapter, and other shrunken antennas that perform better than the stock antenna but still stink when compared to a real wip.

Get it? Got it! Good!

=TOM=

i have a Titan, and it works very well on 40m and above.

it does work on 75 and 80, but not as well as my dipole.

e-mail me with specific questions.

From: Chuck O'Neal <CONEAL@microtouch.com>
Message-ID: <01bc7808$dd960840$f7512ec0@coneal>
Source record: 172982

Hi Folks,

I have available for sale an extremely well built high power AM transmitter that covers 160 thru 10 meters. Final is a 4CX1500A modulated by a pair of 3CX1200A7's using 5KW broadcast iron. Fully metered, vacuum variables with turns counters, extra final tube, all machining professionally done. Plate power supply not included, needs 3500VDC at up to 1.5 amps, depending on the desired output power. All other supplies built in. Requires about a total of 26" of 19" rack space, plus room for the modulation transformer, reactor and plate supply. It can run very conservativly at 375 watts out...up to....well look up the final tube. Priced at $1.00 a watt at full output. Due to weight it is pick up only in Bolton, MA. 30 miles west of Boston. Email me for details. This is a one of a kind that exceeds broadcast quality in operation and appearance.

Need room for the next rig under construction.

Chuck...K1KW

: Moritz DL5UH

The point is your radio will perform FAR better with no other change.
You will hear stations you never heard before and they will hear you.

Its about making a 5 watt radio (the smaller the better) work to its
potential. You might ask why cripple a perfectly good radio with a crapy
antenna?

Yaesu went through the trouble to make an SMA to BMC adapter so why not
just make the antenna?

The radio is very solid and can handel it.

There are a multitude of HH radios out there that will fill your needs.....but you will have to narrow things down a bit....give some thought to the following and then try again.....You may get flamed ny some people for asking a newbie question if you don't !

Features: CTCSS Encode/Decode, # of memories, out-of-band reception ability, "paging" capability,

Availability of accessories: does the radio use standard connectors, or mfgr. specific ones requiring that you buy the spkr/mic, antenna, etc. from the mfgr rather than generic.

Cost: How much do you want to spend ?

I would suggest that you go sown to the newsstand or bookstore and pick up a copy of CQ-VHF, CQ, QST, or 73 magazine. Look through the ads and see if any radios appeal to you. You may get ideas of cost that way too. Once you have 2 or 3 models that you are interested in, try posting to the group and ask people's experience with those particular models. That way you'll get the info you want and need rather than having to sift through a lot of "fluff"
Good Luck in your quest !

73 de Ric (N2YWD)
PS- I have 2 HT's, a Yaesu FT416 2M single bander, and the new ADI AT600 dual-bander. Both are excellent radios !

Now a lot of hams may disagree with me, but I would reccommend the Radio Shack HTX-202. You can buy it and any accessories you may ever need at your local radio shack instead of mail ordering it. It is basic, with a lot of features you need and want, but nothing like dual watch or extended receive. If you want a durable and reliable radio you should get one. The price is about as low as they come - $200.

The nickel metal hydride batteries do not seem to charge well in a fast charger designed for nickel cadmium batteries. Before buying my MaHa battery for the Kenwood TH-79A, I called MaHa to ask if the battery could safely be charged in the fast charger I have for my Kenwood. They checked, and said it was, though they advised me to use the trickle charge mode as much as possible (even on my NiCads) to extend the battery life. After getting my MaHa battery, I tried the fast charger and foud that after about 20 minutes it was so hot that I thought it would catch fire! I removed it form the fast charger, then let it cool down. I used it on the TH-79A until it was again depleted (which didn't take long!), then gave it a full charge on the trickle charge setting. The battery didn't seem to be harmed by the aborted fast charging, but I wouldn't do it again.

Overall, I like the MaHa battery much more than the factory PB-34. The MaHa unit lasts about twice as long. I just wish I could safely fast charge it without having to buy another charger.

Stuart:

I like the ADI 201-HP....has all the features except alpha numeric
display (not important for most) and is only 189.95 from AES. The radio
is MARS/CAP modifiable. HAs both encode and decode built in and works
great....I've owned one for about two months now and have been very
impressed (this from one who really was never interested in VHF at all)
....I love it !

Good luck in the hobby....it's great !

> feature, is there a mod?
>
> Bill
> W8BC

The Kenwood web site has that information in their "Tech notes". To put
the rig into crossband mode you hold the funcation key for 2 seconds
"Double beep". Then you'll notice ax "X" above the key on the furthest
right press it. Your there. Repeat to turn off. The rig also has a
"Remote control" mode. Where you can change freqs, power, tones,
channels ETC... from another radio...You'll need the notes though. If
you cant find them just write back and I'll get them to you...73

Maybe what the world really needs is the "hat mounted antenna". Build something that looks like one of those mag-mount BNC connectors, but without the magnets, attached to the top of a stiff hat. Run a few feet of nice thin RG-174 from the mount down to your handheld. And then you can put any BNC-mount antenna on the hat.

A half-wave would probably work best because it doesn't care much about the ground plane. But you could install some sort of thin foil ground plane the diameter of the upper part of the hat, and I'll bet it would work better with a quarter-wave or even rubber duck than the same antenna on the handheld. The handheld itself plus your arm is a pretty lousy ground plane, and an antenna on your hat is higher and doesn't have half the signal being absorbed by your body.

For even better results with quarter-wave and shorter antennas, drape a couple of ground radials away from the antenna mount and down over the side of the hat.

I'm only half joking here. A hat-mounted active antenna makes an amazing difference in the ability of a GPS to track in difficult conditions (like forest). I think it would make a considerable difference in portable radio operation as well - both receiving and transmitting. The main problem is dealing with the fashion implications, though low branches would also be a problem.

5858. Re: SB-220 question

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-13 00:00:00 UTC
From: qroking@aol.com
Message-ID: <19970613171800.NAA08415@ladder02.news.aol.com>
Source record: 172996

Hello, An SB-220 with good tubes in the CW-TUNE mode with 100 watts drive and tuned for max output will do about 950-1000 watts into a dummy load and bird wattmeter. In the SSB mode key down with 100 watts drive the output will be 1050-1100 max. This all depends on your line voltage and the regulation of it. I have had 3 SB-220's all with good tubes, and they all did as stated above on 220 volt line. It seems as though these are the limits. If you get anything less then these readings, suspect some problem somewhere. Remember, these are max output readings, not readings recommended by Heathkit. The above readings will yield about 700-800 mills on the plate. This exceeds heaths recommedations, but the amp WILL do it. They are a good amp if you treat them right. However they can be easily destroyed with improper loading and hi swr. There are many kits available for this unit for various things, I think they are ALL UNECESSARY
if proper care is taken. I HIGHLY recommend installing a standby switch so that you dont have to shut amp down for barefoot use or loading of tube type final exciters. A simple togglel switch breaking the relay contact is all that is need here. You will get less of a chance of blowing a filament on start-up. If you have an old tube type exciter, be sure to readjust plate tune into amp after amp load-up...IT WILL BE CHANGED. I believe many of the problems reported on these amps can be attributed to operator mistakes on loading. I can go on forever on how to load up an amp properly. But it CAN be done wrong, and many times IS!! 73 LOU

>This isn't usually true. A UPS which can sustain 200 watts for 10 minutes
>can generally sustain it indefinitely. That's because 10 minutes is more than
>long enough to reach thermal equilibrium.

I have my doubts about that. For example, I have a SL Waber UPS rated
at 250 VA. The heat sink for all of the power devices is a large bar
of aluminum attached to the circuit board. This has no significant
heat path to the outside that I can see. The case of the unit is
plastic, with a few small vent slots. None of the aluminum is exposed
on the outside of the case, nor is there a fan to draw air past the
heat sink. I'll bet it depends on the fact that it will only be running
for about 5 minutes at full load before the battery is depleted, and
longer run times go with reduced load.

In comparison, I have a Statpower inverter rated at about 125 W continuous
using the same technology (high-frequency inverter, 60 Hz AC synthesized
from 160 V DC or so). The entire case for the thing is the heat sink -
it's an aluminum extrusion. I'll believe that this will run at rating for
hours.

I've also seen an APC sine-wave inverter with the transistors mounted
to an internal fan-cooled heat sink. I'll believe that it might also
run indefinitely if kept supplied with DC.

> your adjacent channel. K9ZAT

If your neighbor were on your adjacent channel, I think you'd be hearing
one helluva lotta noise, and little else, no matter what receiver you
were using! The filter in the brochure is 1.7 kHz wide at the 6 dB
points, and so these little lobes occupy a few hundred Hz of BW, no more.
What effect they could possibly have on any performance measure is beyond
me.... de Doug, KF6DX/7

Worldwide E-Mail PRESS / INFORMATION RELEASE - Dated: 12 June 1997

From:- Leicester Radio Society (LRS), Gilroes Cottages, Off Groby Road, Leicester. England. LE3 9QJ (Callsigns - G2AA / G5UM / G3LRS / G6XRS)

John Alexander / G7GCK. Chair of Leicester Radio Society. E-mail lrs@jalex.easynet.co.uk

Subject:- Leicester Radio Society Associate Membership Discount Card

Dear Sirs,

LRS is one of the oldest radio societies in the UK (formed 1913) and now requires a move to newer premises with better facilities for training and operating - ready for the next millennium.

We have negotiated a series of discounts with hotel groups and car rental companies within the UK. Anyone who needs to hire a car or book hotel rooms within the UK could benefit from our card and make savings - up to 35% for car hire.

Companies currently with us include Avis Rent A Car Ltd, Hertz (U.K.) Ltd, EuroDollar Rent A Car, Stakis Hotels, Wayfarer Inns and Jarvis Hotels. Together, these excellent companies offer a superb range of accommodation and vehicle hire possibilities.

It is not necessary to be a licensed Radio Amateur in order to obtain a card - it is available to anyone, anywhere around the world, who may visit the UK. Some Car rental companies are also offering discounted rates within the USA and Europe.Every card purchased increases the funds available for those new premises, equipment and training.

As the cards are taken up we expect that other companies will offer discounts, broadening the range and type of savings that can be made - these will be updated onto our new web site.

The discount card has been priced at £10 (Sterling) and can be obtained using a Mastercard, Eurocard or Visa credit card. We intend that this modest cost is recovered very rapidly as bookings, and consequent savings, are made.

Our new website contains details about LRS, its members and what we are hoping to achieve. An order form for the Discount Card is included and can be printed, completed and posted to us here in the UK. Subscribers should allow 28 days for delivery.

Check out http://www.foobar.co.uk/dialin/silver/lrs The web site gives information about membership / associate membership and the benefits of joining up with us.

We are a reputable Amateur Radio Society with big ideas for the future. LRS seeks only to further Amateur Radio in general and all monies raised will be used to this end. JA

We hope that you will include this information within your publication(s) and websites and bring it to the attention of your readers.

Please direct any enquiries to me, John Alexander, via snail-mail, fax or E-mail at the above numbers / addresses. Anyone requiring hardcopy text on LRS Letterheads can be supplied with these via standard mail or fax upon request.

With regards

John Alexander / G7GCK

It amazes me to see people complaining about the SMA antenna on the FT-50. I've owned many handhelds in my time, and my biggest complaint about ham gear was the use of BNC connectors for antennas. They don't lock into place well, and the slippage tends to wear the connectors out. I've repaired or replaced BNC's on HT's more times than I care to remember.

The SMA connector on the FT-50 was a HUGE selling point for me. Finally, a radio with a real antenna connector! You don't see Motorola, Kenwood Commercial, GE, etc using BNC antennas on their HTs, and it's for good reason. They're unreliable.

Of course I seldom use my FT-50 for anything more than a handheld. I've done the "make your radio into an octopus" thing by using it as a mobile and base rig in the past, and it's marginal at best. I now have a base radio and a mobile radio, and the HT gets used only as a portable.

Please Yaesu, don't change the antenna connector!

I don't like the stock antenna... It's deaf and big. I use the Icom FA-S270B, which is deaf, but small. Enough to hit nearby repeaters and work close-in simplex, and remote through my mobile in crossband mode. I'm considering a Comet or Diamond SMA duckie when I need a bit more oomph, but I'm not interested in the 15" 1/4 wave antennas for 2m. I have one here somewhere (Diamond), and it's so big, it makes the HT less than useable.

From: DWINN@TNG.NET
Message-ID: <33a1b3f4.0@news.tng.net>
Source record: 173008

There is a growing number of people showing up on the Amateur VHF/UHF bands
and jamming local repeaters. I feel these are not licensed Amateurs and think
it is fun to JAM and make 911 calls.

There was a company a couple of years back that sold a unit that allow
a snapshot to be taked of the Carrier turn-on and be able to compare it later
to others carriers.

Does anyone know of this company or any software/hardware that will do the
same thing.

: What is the point in having a palm-size radio with a full-size
: antenna, which might easily break or break the connector?

I don't have a tiny HT; my only HT is about the size and weight
of a brick. But my favorite antenna for it is a quarter-wave
length of piano wire (0.030", I think it was), with our without
another 1/4-wave "tail" on the grounded part of the BNC connector.

It works MUCH better than any "rubber duck" I've tried, and it's
really not much more bother. The piano wire is very flexible,
and it doesn't get in the way much. Even fits in my briefcase,
neatly flexed. (If you don't know what "piano wire" is, it's
stainless stuff that holds a straight shape but is flexible
depending on its diameter.)

Darned handy, easy to make, and GREAT performance compared to
a "duck." FWIW. YMMV. Vy 73.

5889. CAUTION: On Metal Hydrate Batery's

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-13 00:00:00 UTC
From: D.Russell
Message-ID: <5nscnn$jd8$1@news.dls.net>
Source record: 173027

My experience on the metal Hydrate batterys?
Well after some research into this charge rates
of the metal hydrates it has come to my attention
that the metal hydrates will hold a maximum of
80% of the batery's capacity according to the battery
anylizer! This was confirmed by a tech friend of mine!
The problem was that the batery thresholds differ
between NiCads and Metal Hydrates according to most
1 hr chargers! So the result is different charge rates!
So ya will find when useing conventional NiCad 1hr.
chargers,that the metal hydrate will prematurely
stae charge completed and after that if left in the
charger will actually start dischargeing! the max
of a metal hydrate charge obtained thus far was 80%
after carefulley watching the charger and removed it
as soon as the charge completed lamp came on in the
smart 1hr nicad charger! This test was done for
Motorola Saber Baterys and Motorola 1hr Smart chargerS!
NOTE THE PLURAL s!! Yes several diferent chargers were
tested! The same results remain! I wonder if others
haver experienced this and is the possibly a compatability
problem with the Nicads and Metal hydrates when being
charged with all our regular standard smart chargers
regaurdless of the manufactures that are out there!
Just a word of caution plaese if ya have a insight
on this let me know,for I am open for suggestions to
this dilema! and have others experienced this?

tnx for reading this David!

Here in Australia a large electronics chain called "Dick Smith
Electronics" is the Yaesu dealer.

Their latest catalogue just out lists a Yaesu antenna for the FT50 with
sma connector and 1/4 performance on 2m and 5/8 on 70 cm "for better
performance than the standard antenna".

Ad doesn't give much info. Cost is AUS$40 and local dealer said they
will be in stock early July.

Steve,

Is being such a jerk an inborn talent or do you have to work hard at it?

Lots of us know who Bob Kline is, and more than a few of us know him personally. So what if he works at AES, he didn't mention that in his post, nor did he post from the AES server. So why do you bring his employer to the table? To show every one how clever you are?

DITTO !!! Well stated.

I just bought an x-ray tube Saturday at an auction. It is 14 " long including a 2" metal ribbed
heat sink. It is about 4.5" at its widest diameter. It say Coolidge tube by Victor X-Ray Corp.,
Chicago. The tube is also marked RD 30214 and 10 MA. Do you have any idea of the age of
this tube, where it was used, the value of it, specs for the tube (ie power supply requirements)?
Or do you know of anyone who might be helpful for this information?

> -wiley KF6IIU wsanders at netcom dot com

Yes, The Yaesu needs the matched pair and also be sure you do the
neutralization after the tubes are installed. US made tubes such as GE
are not recommended and may not even work ONLY Japan made tubes NEC will
work right. I just priced a matched pair of these from RF gain and they
want $150.00 for them. I would very much like to know if you find NEC
matched pairs for less and where.

There is an amusing sequel to this story. Hershman responded to me via email with a two word message ending in "you". I dropped him a note

telling him to lose the profanity, that resulted in a threat. Being a curious sort I went to Dejanews and did a little search on Mr. Hershman it proved most enlightening.

Of particular interest were his postings to alt.sex.prostitution seeking product pricing and/or reviews. Haven't had such a good laugh in years. Almost as entertaining are his posts to alt.sex.sounds. There's more but I've wasted enough bandwidth on poor frustrated little Mr. Hershman for one day and this is really off topic.

BC> I notice that in some ads for the rig (e.g., Jun's Electronics,
BC> p. 168, Aril QST) the claim is made that it will cross-band
BC> repeat.

BC> My questions: How does one put it in that mode? If this is not a
BC> normal feature, is there a mod?

press and hold the f-key, then it should be the key labeled "X" (on
the LCD). This feature is NOT present on all models, I seem to
remember it's the Chinese and the European that hasn't.
the model type can be changed throug some SMD-soldering or cutting of
wires. Make a websearch for "TM-733" and "Kenwood".
Then you'll find it for sure.

I have had one for over a month, and use it pretty regularly. (I also
have the Stand 508, and just bought a 510 yesterday) and am still
using the original batteries since I bought the '41. Battery life is
VERY impressive. The renewal batteries are probably the best bet for
long term use.

I would buy a radio from BOD at AES Las Vegas. I was just giving him a hard time. However, I did have a poor experience once(haven't we all). I will give them a another try. Also, BOB looks like he really enjoys repairing radios in the picture in the AES catalogue WINTER '96.97 ON PAGE 147. I meant no ill will to BOB KG7D.

Al;so remember chargers made for nicad batteries do not deal well with
NiMH batteries. NiMH batteries require different charging
specifications than nicad batteries do. WWW and Associates did write
a tech note concerning this.

Gary

The discussion centered around the design factors involved, and performance
limitations resulting from running a UPS from an essentially infinite
source of
DC power (such as an auto power system which is continuously recharged
by the running engine).

We all are aware of the obvious fact that a small UPS battery will run down
in some specified time at some defined load.

5923. swap 9600 TNC for mobile or HT.

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-13 00:00:00 UTC
From: Brian and Sam Bradshaw <bradshaw@theonramp.net>
Message-ID: <33A13C86.54EF@theonramp.net>
Source record: 173125
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

I have lost interest in packet, and no one in my area uses 9600. I have a PacCom Micropower 2, packet only 9600 baud TNC. It's nice, it has the optional DCD unit installed, and has RS-232 and TTL ports, and a printer interface that I don't understand(I think it's for a dumb terminal). It's in pretty good shape, but it's only got a 6K mailbox. It can also be ran at lower speeds(I ran it strictly at 1200, but was advertised as 9600) by jumpers under the front panel.

I'de like to swap it for a mobile, brand's not important as long as it works good and has PL, or an HT(preferable dual-band), also in good shape w/PL.

If you need more details or are interested, e-mail spamsonite@hotmail.com

Sam Bradshaw,
KB8ZZS.

5924. Re: Want Comments on ADI-600 Dualband HT

Message-ID: <19970613140301.KAA23321@ladder02.news.aol.com>
Source record: 173126

I have had the ADI AT600 for about 2 months now. I like the radio myself, and I'll list some points for you below:

GOOD:
* lots of memories
* decent audio
* receives out of band
* small, but not too small (Yaesu FT50 TOO small ! Fat fingers)
* nicely backlit keypad
* will someday be able to program with my PC (200 memories takes long time)
* Uses standard connectors for accessories, BNC jack for antenna, mini plugs for spkr/mic
* you can listen to 2m on the internal spkr, and 70cm on an external spkr/mic - or vice versa (kinda neat)
* Standard Radio battery pack(s) fit the radio, so easy replacement

NOT SO GOOD:
* One band picks up scanning "noise" from the other, ie-when listening (ie- stopped) on 2m you can the "putt-putt" sound of the 70cm scanning, and vice versa.
* Gets noticeably warm when transmitting, even on low power
* Out of band reception on VHF good, UHF pretty good, 800 Mhz - acceptable. Of course, 800mhz is hard to get without a specific antenna anyway
* PC software for programming still not out yet !
* Some programming functions are tedious (PC software fix ?)

Overall, I like the radio and would suggest it to someone else....for $300 how can you go wrong ? I would advise that you buy the car cord too, then you can go high power when necessary

5925. Unwanted attachments

Source record: 172928

THe Icom 706 Mark II LCD display indeed has DSP, NR, all the
dSP functions on it.

Also I opened mine 706 Mark II and next to J4 is a big 10 Pin connector
in the audio secion of the radio with space for(((DSP unit??)), about
2inch by 3inch.

I bet donuts to dollars this is were the audio DSP was supposed to fit in
but was not ready for release!!!!

Hey, Icom fix the DSP module, and I will place my order for one to
plug into my new 706 Mark II.

How much am I willing to pay????(marketing question), the same price
as the Timewave DSP box!!

why would they raise the price when they are over priced now?

try a command tech hf2500 for 20 % less before the price raise

Better check that price again. I've owned both of them and the 91B is the stronger amp, bigger transformer, better protection, more output, output tube 1/2 the price of the 3CX800a7, quieter, smoother and 100% guaranteed for four (4) years. Nothing else even comes close to that. The other amps you mentioned aren"t even in the same league. 73, Van

Got the new Icom 706 Mark II, The noise blanker works real well
for auto noise on the Mark II. Also They put back to back diodes on
their VHF Front end 60-200Mhz, haven't heard any static blow out
problems.
They fixed their font end 60-200Mhz with a varactor tuned front
end, no more images, etc.
No more FM BC overload. TX now is as good as Alinco DX-70, they
fixed up the Icom Mark II really well, now if they sell that DSP
module that goes into it, it be even greater!

> you cant find them just write back and I'll get them to you...73
1. Hold the function key (Bottom Left Button) for 1 Sec:
2. The display will show "X" on the far right bottom side.
3. Press the far right botton under the "X" and the Cross band will be
on.
4. It will show EX:147.2.0.0 <-- Notice the periods.
5. It will only cross band 70 cm <> 2Mtr NOT 2Mtr<>2Mtr

Hope this helps
Tommie

I agree with Bobs evaluation techniques. However, I have rarely seen
salespeople up to those standards. My previous comments about AES had
nothing to do with BOB himself. If one receives poor or excellent
service they should post to this newsgroup.

I have several confirmations about ICOM "ALMOST" putting in DSP in the IC-706 MK II. IF you own the radio you can see the words "DSP" on the LCD display. Also, if you flip the radio and look at the circuit PCB you with see a small 15 pin connector. This coonector ties in with the audio output portion of the IC-706 MK II. ICOM had a small sheilded PCB that plugged into this connector. The DSP created lots of birdies on the receiver and Icom could not solve the problem in time. Icom was under the gun to get the radio out for DAYTON '97. BTW the heat dissapation of this PCB DSP wa 1 amp and generated 12 watts of heat additional.
GARY FIBER may dispute this posting but it is very accurate.
Also, Icom will definately put DSP in the next version "IC-706 MK II"!!!
I suggest we put pressure on Icom to finish the DSP PCB and offer it as an option (say $150)seems fair since it is audio DSP.

Hi Mike --
I have one. It's now at Icom Japan being serviced. I lost the
HF+6 front end just a few days after buying it, caused I assume by
a 2 meter FM transmission with adjacent 2M and HF antennas.
Being fixed, under warranty, as I type this.

I did find it better than the original 706 -- even the CW keying
waveform is slightly better. QSK is still via a noisy relay, but
overall some nice improvmements. Sure can't beat the value of
this all-mode rig!

73,
Joe

From: "Ladd V. Straatmann" <laddo@bellsouth.net>
Message-ID: <5nv667$m15$1@news.msy.bellsouth.net>
Source record: 172950

A little while back, I was browsing these newsgroups, just like you are now, and came across an article similar to this that said you could make thousands of dollars within weeks with only an initial investment of $5.00! So I thought, "Yeah, right, this must be a scam," but like most of us, but I was curious, so I kept reading. Anyway, it said that you send $1.00 to each of the 5 names and address stated in the article. You then place your own name and address in the bottom of the list at #5, and post the article in at least 200 newsgroups. (There are thousands.) No catch, that was it.

You can make up to or over $50,000.00 in 4-6 weeks, maybe sooner! I SWEAR, I'M NOT LYING TO YOU, AND THIS IS NOT A SCAM! If you're interested in making some big bucks, keep reading; if you're not, I apologize for wasting your time.

So after thinking it over, talking to a few people first, I figured what have I got to lose except for 5 stamps and $5, right? One person who very recently had tried it said it worked like a charm. He started getting money in the mail! He was shocked! He figured it would end soon, and didn't give it another thought. But then the money kept coming IN - tripling in size and multiplying by 10 - 20 times the amount that he got the first week! In his first week he had made a total of over $1,000!!! In the third week he had over $10,000 dollars, and it's still growing! This is his fourth week and he's made about $42,000 Total, and believe it or not the money is still coming in...

I know this has been checked out several times with the legal community and is deemed perfectly Legal, but being a very cautious person, I also wanted to check it out with the US Post Office. I called them

(1-800-725-2161) and explained this process and asked if there were any regulations that would be violated by doing this. Without hesitation, the postal official also said it is legal. At that point, I felt comfortable going ahead and joining the process.

Let me tell you how this works and most importantly, WHY IT WORKS!...Also, make sure you print a copy of this article NOW, so you get the information from it, and begin making money. The process is very simple, and it consists of 3 ease steps:

STEP 1: Get 5 separate pieces of paper and write the following on each sheet of paper: "PLEASE PUT ME ON YOUR MAILING LIST. YOU ARE NUMBER #." Get five $1 bills, and place ONE inside each piece of paper that you have just written on, and fold each piece of paper so the bill will not be seen in the envelope (otherwise, nosy people who like to steal envelopes with money in it will not get yours). Put one paper inside the envelope and seal it. Do the same for all 5. You should now have 5 envelopes sealed, each having a piece of paper AND the $1 bill inside.

NOTE: Make sure those words that were stated above are written on each piece of paper. What you are doing is creating a service by this. This is PERFECTLY LEGAL. Now, mail the 5 envelopes with the paper and $1 in each to the following 5 addresses:

#1 G. Cisnero

VLN 1151

Unit C-105

1601 N.W. 97th Av.

Miami, FL 33172

#2 S.A.

P.O. Box 758

Grover Beach Ca 93483

#3 C. Smith

240 Sunnyridge ave #112

Fairfield, CT 06430

#4 M.Boles

1159 Harrison Pike

Apt. # 2303

Cleveland, TN 37311

#5 Ladd Straat

200 Jefferson Dr.

Houma, LA 70360

STEP 2: Now take the #1 name off the list that you see above, move the other names up (5 becomes 4, 4 becomes 3, etc...) and add YOUR Name as number 5 on the list.

STEP 3: Change anything you need to, but try to keep this article as close to original as possible. Now, post your amended article to at least 200 newsgroups. (I think there is close to 18,000 groups) All you need is 200, but remember, the more you post, the more money you make!

Don't know HOW to post in the newsgroups? Well, do exactly the following:

FOR NETSCAPE USERS,

1) Click on any newsgroup, like normal. Then click on "To News, which is in the top left corner of the newsgroup page. This will bring up a message box.

2) Fill in the SUBJECT with a flashy title, like the one I used, something to catch the eye!!!

3) Now go to the message part of the box and retype this letter exactly as it is here, with exception of your few changes. (Remember to add your name to number 5 and move the rest up)

4) When you're done typing in the WHOLE letter, click on FILE above the send button. Then, SAVE AS.. DO NOT SEND YOUR ARTICLE UNTIL YOU SAVE

IT. (So you don't have to type this 200 times :-)

5) Now that you have saved the letter, go ahead and send your

first

copy! (Click the SEND button in the top left corner)

6) This is where you post all 200! OK, go to ANY newsgroup

article

and

click the TO NEWS button again. Type in your flashy subject in the

SUBJECT BOX, then go to the message and place your cursor here. Now

click on ATTACHMENT which is right below the SUBJECT BOX. Click on

attach file then find your letter wherever you saved it. Click once on

your file then click OPEN then click OK. If you did this right, you

should see your filename in the ATTACHMENT BOX and it will be

shaded.

NOW POST AWAY!!

IF YOU ARE USING INTERNET EXPLORER:

It's just as easy, holding down the left mouse button,

highlight this entire article, then press the CTRL key and C key at the

same time to copy this article. Then print the article for your records

to have the names of those you will be sending $1.00 to.

NEXT, Go to the newsgroups and press POST AN ARTICLE type in your

flashy subject and click the large window below. Press CTRL and V and

the article will appear in the message window. ** BE SURE TO MAKE YOUR

ADDRESS CHANGES TO THE 5 NAMES. ** Now re-highlight the article and

re-copy it re-copy it so you have the changes.... Then all you have to

do for each newsgroup is CTRL and V and press POST. It's that easy!!

THAT'S IT! All you have to do is jump to different newsgroupes and

post away, after you get the hang of it, it will take about 30 seconds

for each newsgroup!

** REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE

MONEY YOU WILL MAKE!! BUT YOU HAVE TO POST A MINIMUM OF

200 **

This is WHY this works!

Out of 200 postings, say I receive only 5 replies (a very low example). So then I made $5.00 with my name at #5 on the letter. Now, each of the 5 persons who just sent me $1.00 make the MINIMUM 200 postings, each with my name at #4 and only 5 persons respond to each of the original 5, that is another $25.00 for me, now those 25 each make 200 MINIMUM posts with my name at #3 and only 5 replies each, I will bring in an additional $125.00! Now, those 125 persons turn around and post the MINIMUM 200 with my name at #2 and only receive 5 replies each, I will make an additional $626.00! OK, now here is the fun part, each of those 625 persons post a MINIMUM 200 letters with my name at #1 and they each only receive 5 replies, that just made me $3,125.00!!! With an original investment of only $5.00!

AMAZING! And, as I said 5 responses is actually VERY LOW! Average is probable 20 to 30! So lets put those figures at just 15 responses per person. Here is what you will make:

at #5 $15.00

at #4 $225.00

at #3 $3,375.00

at #2 $50,625.00

at #1 $759,375.00

When your name is no longer on the list, you just take the latest posting in the newsgroups, and send out another $5.00 to names on the list, putting your name at number 5 again. Then start posting again. The thing to remember is, do you realize that thousands of people all over the world are joining the Internet and reading these articles every day, JUST LIKE YOU are now!! So can you afford $5.00 and see if it really works?? I think so - People have said, "what if the plan is played out and no one sends you the money? So what! What are the chances of that happening when there are tons of new honest users and new

honest people who are joining the Internet and newsgroups everyday and are willing to give it a try? Estimates are at 20,000 to 50,000 new users, every day, with thousands of those joining the actual Internet. Remember, play FAIRLY and HONESTLY and this will work. You just have to be honest. Make sure you print this article out RIGHT NOW, also. Try to keep a list of everyone that sends you money and always keep an eye on the newsgroups to make sure everyone is playing fairly. Remember, HONESTY IS THE BEST POLICY. You don't need to cheat the basic idea to make the money!! Also remember that if nobody sends money then nobody benefits. I'm sure you would want the people after you to send in their money.

So think of it this way, you are giving them a gift in return for introducing

this wonderful money making method to you. If everybody pays, everybody gains.

GOOD LUCK to all and please play fairly and reap the huge rewards from this, which is tons of extra CASH. ** By the way, if you try to deceive people by posting the messages with your name in the list and not sending the money to the rest of the people already on the list, you will NOT get as much. Someone I talked to knew someone who did that and he only made about $150.00, and that's after seven or eight weeks! Then he sent the 5 $1.00 bills, people added him to their lists, and in 4-5 weeks he had over $10k. This is the fairest and most honest way I have ever seen to share the wealth of the world without costing anything but our time!!! You also may want to buy mailing and e-mail lists for future dollars.

Please remember to declare your extra income. Thanks once again

:)

The appropriate way to end a sentence is with a period. Overuse
of the exclamation point becomes weary to readers and reduces
the credibility of the writer.

5955. IC-706 MK II DSP BUILT IN !!!!!

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-14 00:00:00 UTC
From: hershman <hershman@ix.netcom.com>
Message-ID: <33A35178.2EF5@ix.netcom.com>
Source record: 172957

Yes the Icom 706 MK II had DSP built in but then Icom decided to scrap it. If you own a IC-706 you will see on the LCD the words "DSP" and "NR"(noise reduction).
If you look at the bottom PCB of the radio you will see a 10 pin Phenolic connector. there is also a 2x3 space for the DSP shilded PCB
I just got another confirmation from a Icom (outside the USA) informent. I had to use my special "INTERIGATION" methods on him. He is recuperating nicely at a nearby hospital.
What I got from him before he passed out was that Icom was going to offer this DSP as an option for $??? and You would simply plug in the PCB just like the other options on the IC-706 MK II (CTCSS decode,voice synthesizer etc. You set the IC-706 MK II setup so the radio knows the DSP is installed in the radio. I wish ICOM would try to get the DSP unit to work and offer it to the Ham customers. I would buy it if it were under $200 (you can buy a timewave DSP 9+ for $200.

Gary Fiber from Icom may tell you guys that what I am saying is not true. Remember who told you guys about the Icom 706 Mk II long before it was announced ! Also I clearly remember Gary Fiber saying that Icom had no plans on making the IC-706 Mark II. Hee Hee. You guys know who to believe.

> > WA3JPG

I agree with Clark and Mike! Icom should offer the DSP PCB as an option but at a fair price. I think $150 is pretty fair. Just get the bugs out. I have three confirmations about Icom scrapping the DSP feature due to time constraints/Birdies with the DSP. The last "Icom Informant" gave up this info after a brutal "interrigation". He is now recouperating a local hospital.

I wanna get one of these, and want to know if anyone out there can comment on the AM Aircraft receive quality. I work near a Delta hub and would like to listen to air traffic control during my lunch hour. :-)

Any comments are appreciated, even other general comments about this HT.

THANKS!

5965. Yaesu announces the new HF solid state amplifier price

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-14 00:00:00 UTC
From: morel@shani.NET
Message-ID: <01BC783F.7A0A4F20@teleport43.shani.net>
Source record: 173031

Yaesu Japan announced the list price for the new 1KW output
solid state / automatic antenna tuner :

* VL-1000 - amplifier deck & automatic tuner: Y350000 !!
* VP-1000 - 50Vdc switching power supply : Y200000 !!

Those are the Japan list prices as figured in their WEB site.
I suppose that the US prices will be at least 20-30% less at
dealers. Anyway, those figures are quite prohibitive and
disappointing.

The VL-1000 was exposed at Dayton at Yaesu booth with no
detailed technical specs or brochures. Maybe more infos
will be released at Friederichshafen HamFest at the end of
this month.

No news about the ICOM new similar solid state amplifier
IC-PW-1.

5980. Last chance to buy an Alpha Amp at old pricing....

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-14 00:00:00 UTC
From: sandy@sandy.com
Message-ID: <5ntdvr$i7d@surf.com>
Source record: 173046

Last chance to buy an Alpha amp at old pricing....
Only a few days before Alpha/Power raises its
prices on ALL Alpha amps. A small deposit
will hold one for you at the old price...order now!

You're invited to "See The Quality, Feel The Power"
of the latest Alpha Linear amplifiers at Alpha's
new web site:

http://www.alpha-power-inc.com

For additional information about Alpha amps,
please contact Dave Wilson at:

Tel: (970) 535-4173
Fax: (970) 535-0281
Email: sales@alpha-power-inc.com

Alpha/Power was founded more than a quarter century
ago as ETO (Ehrhorn Technological Operations) to
design and manufacture the best possible maximum-
legal-power, continuous heavy duty, HF linear
amplifier for radio amateurs.

Alpha/Power (ETO) amplifiers contributed to the
expressions brick-on-the-key, maximum legal-power
and all modes, no time limit to the lexicon of
amateur radio. They pioneered the no-compromise
desk top amplifier, hands-off no-tune-up operation,
full break-in (QSK), standard 160 mater coverage,
and microprocessor-controlled automatic bandswitching,
tuneup and remote control.

Alpha/Power (ETO) also has pioneered realistic buyer
protection with long term limited warranties (never
prorated and now an unequaled four years), and the
money-back guarantee.

Please respond directly to Alpha, NOT to me! Thanks.

It would be a great day when the radios that are offered are
designed to be UPGRADEABLE PLATFORMS.

As consumers, we should INSIST upon it and help these manufacturers
design what we REALLY WANT.

Who wants to be hosed every year as new models come out and
transcend the features that they just invested in...are we supposed
to buy new radios every year?

Some of the implementations are anemic and some of the missing features
prove that people who aren't USING these radios are playing too big a
role in DESIGNING them!

The HARDWARE should be modular and the SOFTWARE should be
upgradeable and the feature sets should come from US!

Why is it that the radio manufacturers WWW pages don't solicit
opinions from their users? No email inputs exist that I've
seen other than notes to their "webmaster" so you can complain
about slow loading graphics and such.

<and now, WD1V steps off the soapbox, stretches, and takes a
big lungful of air, noticing that everything looks just a little
better than it had just moments ago...it was as though he
had released something that he didn't even know was inside.>

I have an Amp Supply LA1000a amplifier in need of a new meter
and just wondered where they went to. Anybody know? Their
number in Twinsburg, OH is now longer in service.

The manufacturer of the meter, Modutec, is a company I would
suggest not doing business with. They seem unwilling to take
a small order (<$200), sample a meter, and have no customer
service department.

73,
Skip Withrow - WB0BBE
ah441@fr

Amp Supply has been out of business for years. Contact Bill Edwards at
Omega Electronics in Knightdale, NC. His Phone # is (919) 266-7373 Fax
(919) 250-0073. He was Denny's right hand man on those amps. He carries
parts and repairs them. He knows them inside and out and would be able to
help you. 73, Van

I wonder why the Japanese amplifiers cost so much? I think a QRO or Commander amplifier is a better choice. I wish they would give us 6 meters on the American Tube amplifiers.

I have an AL80B and am very happy with the single 3-500Z amp. Our DX club uses two of the amps during CQWWSSB each year on a dxpedition. We don't use the ALC and drive the amps to 1200-1300 out with no problems for the entire contest period. Great little amp. I run it on 220vac and does not pull many amps and everything runs cooler.

Since I am not trying to compete with the big gun contesters I don't need any more power than what the AL-80B has to offer. I run a Mosley Pro-67B3 antenna at 85ft and only use the amp on less than 5% of the dx contacts I make.

The Yaesu Ft 101 B - F models Used 6JS6C and 1 - 12BY7A For the
driver and the FT101ZD used 6146B's and the 12BY7A and the FT102 also
used 6146B and 12BY7A the FT401 Use 6KD6 and 6 or 10GK6 for the
driver,, I service these every day. so am verry familiar.
Just trying to help.
Thanks
Dan...

Yeah, we see people sporting these antennas at Dayton every year.
One enterprising pair of hams even had quads mounted on their
hats. That let them DF each other in the fleamarket. A metal hardhat
with a broad brim (the kind oilfield workers usually sport) is best for
this sort of thing. Keep the power down and transmissions short,
though, don't want to roast your eyes and brain.

5997. Re: Ten Tec Omni VI Plus & SSB

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-14 00:00:00 UTC
From: turner@safety.ics.uci.edu
Message-ID: <5nub02$a06@safety.ics.uci.edu>
Source record: 173063

That is a good question. I had the Kenwood 940 and a friend's
FT 1000D on the same shelf with my OMNI VI (not plus) for a
while last year. I am a die hard Ten Tec fan. I like CW, but
also use a lot of SSB.

The OMNI is fine for SSB. However, there are features of the
others that make SSB more fun and pleasant, and they are things
you should think about. The OMNI VI has one wide bandwidth of
2.4 (a little less because of 2.4 filters in each of two IF's).
The 940 model has a standard bandwidth of 2.7, I think the same for
the 1000. This is much more pleasant to listen to when ragchewing
on SSB as far as my ears are concerned. With a quality speaker
it is very smooth sounding.

The OMNI has a PBT which works very well. However, the
others have forms of slope tuning that allow tailoring of the
passband from either side of the center. The PBT really only
gets you to one side. It is not as flexible for SSB bandwidths.
This is only a factor if you work in QRM and like the maximum
bandwidth possible for SSB (I do).

Those are the only things about the OMNI that do not favor SSB.
It is still easily as good for digging out weak SSB signals and
killing QRM while allowing intelligible signals to be heard.
So if some level of "fidelity" is important to you (and the OMNI
is not bad at all in this regard, it is equal to most, but not
to the top line riceboxes), go listen to one and decide for yourself.

Oh, the internal speaker in the 961 supply is not much, it works
but that is about it. There is a new 962 power supply, I don't
know if they have improved the speaker in it. I always used a
good quality external speaker and it helped a lot.

The OMNI wins hands down for CW. I can put it next to another
radio and you can pretty hear the difference good filtering and
IF structures make.

Overall, if I had to have one radio in my shack, I would still
choose the OMNI VI. However, I would be happier with SSB operation
if there was a slightly wider bandwidth available and some form of
slope tuning.

Source record: 173064

In <john-1406970557450001@wd1v.mv.com> john@wd1v.mv.com (John D. Seney) writes:

>It would be a great day when the radios that are offered are
>designed to be UPGRADEABLE PLATFORMS.

There is one manufacturer that does this now: Ten Tec. Check the QST
ads about the DSP upgrades for the OMNI VI.

>The HARDWARE should be modular and the SOFTWARE should be
>upgradeable and the feature sets should come from US!

I agree 100 per cent. It is industry standard in many
industries. Ten Tec does this to some extent.

>Why is it that the radio manufacturers WWW pages don't solicit
>opinions from their users?

Ten Tec has a factory rep presence on the Ten Tec listserver. They
listen to suggestions that way. I have not checked their web page
because my feedback gets in on the server.

(I know that Yaesu has a sales rep who is often answering questions
around here on the newsgroups, too.)

Your comments are well taken, John. I believe more should be done,
but I suspect that most manufacturers see the "consumer" market in
amateur radio and don't anticipate active consumers for some reason.
Maybe because design and manufacture go on across the ocean it
becomes tough to get such input in a form they can use.

: Tks 73 es Dx Frank *****F 6 B L P*****
:

Cher Frank,

I had many problems with a Cushcraft R5 and lately bought
a GAP Titan.

At this poor time in HF propagation, it seems just as good,
without the problems.

However, I would add that the GAP MUST be well guyed (ignore
waht GAP say). Also, the GAP seems to be more efficient at
radiating into other VHF antenna systems. But it does not cause
SWR problems, nor the RF into the shack. Its bandwidth is greater
and published SWR figures more easier to obtain with little modif-
ications.

6003. Can We Limit "For-Sales" and "WTB" In Rec.Equipment?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-14 00:00:00 UTC
From: kn4aq.gary@mms.net
Message-ID: <33c0b8ee.10864996@NEWS1.MMS.NET>
Source record: 173069

Hi, rec.radio.amateur.equipment readers,

Please pardon my attempt to become a newsgroup cop, but the newsgroup rec.radio.amateur.equipment is attracting more and more "for sale" and "wanted to buy" posts, and I hope I can make an improvement by politely letting everyone know that this newsgroup is designed for the discussion of equipment. There is another newsgroup -- "rec.radio.swap" that is dedicated to ham radio equipment sales and trading. (I think because it doesn't have the title "amateur" in it, some hams might not recognize rec.radio.swap as an amateur radio newsgroup -- but it is.)

Why worry about this? Well, it's just much harder to look for subject lines of interest when you have to wade through the "for sales."

Over the past few weeks, I've sent private mail to many of the hams who posted "for sale" messages here, with the message printed above. I've received many replies, and thankfully none were angry. Many hams saw so many "for sales" here that they quite naturally assumed this was the place to post them. Traditionally, it is not. I see some value in returning to that tradition, since it makes scanning the newsgroup for more-or-less technical discussion much easier. It would also make buying and selling easier, with just one newsgroup to review.

This is a purely a personal message. I'm not connected with or acting in any official capacity for the internet, usenet or the newsgroup. Hopefully you will not take offense, and if you disagree, please feel free to follow your own conscience.

I concur! Although I like the little unit, my DX-70 is now back to the factory for the second time for a nearby lightning strike. The first time, it was D12 (a diode I guess) that was blown. I am hoping that it is the same problem this time.

Other than that, I really like the little rig and get exceptional good audio reports. Also, the noise blanker is most INeffective!

Hi,

This is a Solicitation Email, we are looking for new TUFF'97 DISTRIBUTORS.
TUFF'97 is a promotional concept for a prospect follow-up system called
"Simple Track". Software designed for Windows 95, 3.11 and NT
machines. (Macintosh users read the NOTE below(*))

Concept:

The TUFF'97 software includes a copy of Simple Track, so you can use this
for your own personal administration (free). However, the TUFF'97 software
is designed to give you BIG TIME credits for just taking the efforts to
PROMOTE it.

How do I get those credits?. Easy, just distribute/promote it. How?
(Give away the software for free, put it on your website/homepage
and let everyone download it. Give it to your friends, attach it by
email etc). With a one time $40.00 (USD) validation code purchase,
YOUR name becomes part of all sofware you sent out to your customers.
When your TUFF'97 software gets validated, all your personal information is
automatically integrated in the software, so everyone knows how to reach
you by phone/fax or email and where to sent the check/money or cash orders.

Basically this is the concept. Offcourse you need the software to grasp
the whole thing. Believe it, there is absolutely no marketing knowledge
required, just ask for the software package, join and start promoting your
own TUFF'97 line. The only thing you DO need is a PC or Mac(*) and Internet.

(*) TUFF'97 is only available for MacOS users running Connectix VirtualPC
or Insignia's Sofwindows 95/3.11. A true MacOS version is not available.

When you're interested in becoming a TUFF'97 distributor and create your own
distribution line, sent a mailto:FiReStArTeR@frodo.com and ask for your
copy of the TUFF software (We'll sent you a download location and install
instructions). This is a serious opportunity, so only serious responses
are processed. If you're not interested, have a nice day.
Best Regards,
Tony Scott

>Gary
> are the inverters used in the UPS pure sine wave? some are some aren't?

That's right. They run the gamut from squarewave to modified sinewave to
a pretty pure sinewave.

>how does it affect a amateur radio if it is a steppped sine wave,
>presuming some are? I would think this is not good.

Mostly, it doesn't matter. Pure squarewave can present some problems for AC
motors, such as cooling fans, but modified sinewave generally addresses that.
The modern switching supplies in radios take squarewave in stride, and even
older linear supplies can generally handle it unless they are marginallly designed.

Any inverter, or other switching power supply, can be a source of RFI. But it
isn't necessary for the inverter to output a *pure* sinewave in order to clean that
up. Ordinary RF bypassing will make even a squarewave inverter clean enough
at HF or VHF+. The harmonics needing suppression are *very* high order, and
don't significantly alter the waveshape.

Often any problem will be in the reverse direction, IE RF getting into the inverter
can disrupt its operation. This can happen regardless of the waveshape the
inverter outputs. Good shielding and suppression is needed to prevent this.

For amateur radio purposes, the major difference between various brands of
inverters is not the waveshape that they produce. It is the degree of RF proofing,
both in and out, that they employ. Unfortunately, the manufacturers don't often
give us any test data on this. We have to find out by inspection and experiment
whether the inverter we are considering is adequately shielded and suppressed
for our purposes.

Gary, I am not complaining that Icom should have put DSP in the RADIO.
They at least attempted to do it but for some reason did not follow

through. Icom is keeping quiet on this. It is obvious that the letters DSP and NR are on the LCD. I and several other hams found a unused connector on the bottom of the PCB that is an audio out 15 pin connector. There is a 3X4 spavr for a DSP shielded module to sit.
I heard Icom scrapped the DSP for reasons: they were in a rush to get the radio out for Dayton '97 and had some bugs in the DSP module.
All we want is for Icom to try to get the bugs out and offer it as an option.

1. My 706 went stupid yesterday and reset itself to factory settings. Lost all memory settings. It would not power up whent the power button was pushed. I gigled connections and it came back but came back stupid. I had a preamp problem and had blowen the 4 amp internal fuse earlier in the day. It was replaced without incident at that time.

Today it would not power up at all! I removed from the mobil installation and hooded up the front pannel direct. Still dead. I checked the fuse it is good. There is 12 Volt in the radio but not at the fuse connector.

DOES ANYONE RECOGNIZE THIS PROBLEM AND HAVE A FIX FOR IT.

2. Can anyone recommend an ICOM repair shop that won't mess with my modifications, is reasonable, and knows the 706.

Thanks to the NEWS groups.

There is a modification that can be made to the 101-e series that makes
it possible to use the american tubes in this radio. Im not exactly sure
of the exact address for this mod but if you do a search for "Yaesu
FT-101-e" it will come up. I have this file on file, myself and if you
need it just drop me an email and I will forward it to you. I will soon
be in the market for these tubes also so Ill be doing this mod myself.
Also, the tubes in my radio at this time dont appear to be matched in any
way as they are totally seperate. However in my cb linear which uses
similar type tubes, they seem to be joined at the top by a board and are
inseperable. So I will probably learn all about this "matched" thing
myself in the near future. Good luck>

For out-of-band pgmming, enter an in-band freq, save the file, and use a sector editor to change the freq to ham. You will also require a method of converting hex to dec and back again, such as an HP calculator. Once you have edited said sector, you can re-run your RSS and program the radio. You will also have to re-align the radio using the "warp" feature in the RSS to bring it back on freq, as it will be out a few kHz.

Do you know what make the Smart Charger so smart? Without know how do the chargers work and what is the charging characteristics of the battery, I will not say that the battery is fully charged after the "full" indicator light is on. So, what tell the charger that a Metal hydrate is full? Delta V? Anyone has an answer?

Robin,
I have the Gap too.
And, have found it to be a great antenna ,...And it at least fills the specs listed . Except the guys! I felt it was just to flexible to hold up without guys... put 1/16" dacron abt 2/3's of the way up... Just enough to stablize. It's been thru 60mph+ without problems now.

I have an Icom IC-22A crystal controlled 2-meter radio for
sale. I've used this unit for many years on packet here in
the Dallas area, and its been a good work horse. Heres
a chance to get on Packet with a very reasonable but very
good transceiver. Its crystalled for 145.09 mhz which is
the packet bbs frequency in this area. I also have installed
a Com Spec SS-32p ctcss encoder. I never got a microphone
with it, for the intention was to use it for packet. I have spec
sheet for the encoder, and zerox copy of a manual for the
IC-22A. I'm asking $85.00 plus shipping.

Call (972) 962-3595 between 10 AM and 2 PM weekdays,
and after 10 AM weekends. Or email dkiefer@altinet.net

Thanks es 73 Don W4QXK

Yes, I noticed this also on my Icom 706 Mark II, and the internsal 10
pin connnector and open space in the bottom audio section.
My friends want to get the Yaesu FT-920 DSP, but if Icom comes out with
a DSP module on the 706 Mark II, they say they wait and jump at the
706 Mark II with a plug in DSP module.

Joe ,

I have an Icom 706 Mark II, and previously had the
original IC-706.

I really like the 706 Mark II, it is very much improved
over the original IC-706 in design!!

The Mark II VHF 60-200Mhz receiver was greatly improved
in many ways.

The New Icom 706 Mark II is major changed radio and
simple mods done to a 706 will not make it a Mark II.

These are my observations on the New Icom 706 Mark II
from a technical side.

Icom fixed the 60-200Mhz receiver, to be more sensitive.
The new Mark II has additional selective front end filtering
to cut out image response(means better than 3dB improvement
in RF to IF noise Figure).

A quick inspection in the Mark II has a new VHF RF Front
End (60-200Mhz), with additional preselect varactor tuned stage
to cut out images. Use to see Aircraft band 118-135 portion get
blasted by FM BC band. If you turned on the preamp, the signal
got actually noisier while the S-meter went up. Now its just the
opposite, when using the preamp, ithe signal gets more quieting
in the receiver, and S-meter goes up!!(like it should).

Additional, the front end has two back to back diodes to
protect the front end from 6 meter tx, along which is a shunt
diode to mute the 60-200Mhz front end when operating the HF-6
meter portion (prevent front end damage to high RF signals.
If you on 2 meters and transmit with another mobile on two
next to each other, well that may be ?? to how much you can
protect the receiver. This change really helps the RF burnout
issue on the original 706's if mistreated. Still use my Comet
duplexer with the next 706, as well as the old 706, and never
had a front end die. My suggestion to you is get that duplexer
or just have one antenna at a time on the radio, use a coax switch!!
Just have to exercise a little caution and common sense, and you
original 706 front end should last as long as you have the radio!!
I use the Duplexer or switch method on the new Mark II. You can not
pump watts into the front end, it's just plain semiconductor physics
my friend. Use a little prevention, and you will not have problems.

Also the FM broadcast WFM 88-108 reception was improved greatly!!
If you put a long wire on the FM BC band (88-108) and had many strong
FM BC signals into the IF spaced close together, the IF filter was
not sufficient to separate the signals and would mix and you could
hear 2 - 3 FM BC stations while listening to to FM BC station.
Now the the Icom 706 Mark II, this was fixed, now the radio hears
only one station, does not exhibit this with the new IF filters!!
Additionally, the S meter now works in the FM BC-Band on WFM along
with the spectrum Scope, (original 706 did not). The also increased
the Scope to have a 0.1MHz steps which is handy in the FM BC-Band!!

The transmit audio is much better, with with wider SSB filter
than the orignal 706 and changes to the Microphone/Audio circuitry.
NO more comments that Alinco's sound's better, Actually I think the
new Icom 706 Mark II tx audio is even slightly better than the DX-70,
which I have!!

You can now cross band tx between bands, before the original 706
could not!!

They added the Tone CTCSS PL Squelch receive, which is really nice
on busy VHF frequencies.

The Power Amplifier has been modified to a new design to have
thermal shutdown protection if it gets too hot!!, along with
a thermal Fan switch. The Ip3 performance has been improved with
a new Bipolar Design on the 706 Mark II, as opposed to the MOSFET
PA used in the original 706 with less Linearity.
Also, the casual ham will not notice this, but if you turn on the
706 Mark II, and set the display to the low light Setting ond tilt the
LCD display , you will see the words DSP , ANF, and NF. It does not
take a genius to figure this out. We all may see an DSP option being
offered for the Mark II. These labels are seen since LCD displays
employ liquid films that change densisity due to the chage presented
to them, while unactivated looking straight on, seem invisable, but at
an angle the fine sub micron film depth relects light slightly
different to to the properties optical light transmission through
different thickness films. When activated the thickness is changed due
to the charge and the LCD display becomes visable. For appliance
operators that are not enginneres, this is the simplest explanation.
Tjhe point here is that the Icom 706 Mark II, possible will have a
SP board option. Looking one the Botton is a 10 pin connector next to
the audio section of J4 and a section about 2inch by 3inch to accomodate
a possible audio DSP module. I know this will be denied by Icom and be
called a plug as a test point!!! (But they even denied there was
a Icom 706 Mark II)!!!
So my friends, I am waiting for the DSP option.

Moving along, I went to London to try the 706 and 706 Mark II
before it made it's day in the USA and found that the HF reciever
seemed better on 20meters, almost like less IF gain, anyway, to
listen the radio with the new lager speaker in it, it sounds
much better!
The noise blanker on the old 706 was useless, thre new Icom
706 Mark II noise blanker, really works well in the car on
auto noise type pulses and on AM can be switched off. I could
never use the original NB on SSB with strong signals with the old
706, Now the new Noise Blanker works quite well.
I like the 20Watts on the New Mark II as opposed to 10Watts, I
use the Mirage B2530 Amplifier and get near 300 watts out for 144MHz
SSB work!!!.
I really like the quick menu for band change and the new RIT functions.
Anyway, everyone knows of the applicance operator improvements.
The meessage here is about the technica improvements in the New
706 Mark II versus the original 706 from an engineer's
perpective!!

Hope this helps you, waiting for DSP option .
73

It would be a great day when the radios that are offered are
designed to be UPGRADEABLE PLATFORMS.

As consumers, we should INSIST upon it and help these manufacturers
design what we REALLY WANT.

Who wants to be hosed every year as new models come out and
transcend the features that they just invested in...are we supposed
to buy new radios every year?

Some of the implementations are anemic and some of the missing features
prove that people who aren't USING these radios are playing too big a
role in DESIGNING them!

The HARDWARE should be modular and the SOFTWARE should be
upgradeable and the feature sets should come from US!

Why is it that the radio manufacturers WWW pages don't solicit
opinions from their users? No email inputs exist that I've
seen other than notes to their "webmaster" so you can complain
about slow loading graphics and such.

<and now, WD1V steps off the soapbox, stretches, and takes a
big lungful of air, noticing that everything looks just a little
better than it had just moments ago...it was as though he
had released something that he didn't even know was inside.>

Message-ID: <01bc7960$7f5aa700$401392ce@kb0ula>
Source record: 172884

A couple friends and I are trying to put together a cheap repeater. We're looking for a good tower, for a repeater antenna, and maybe some 440-link yagis. It doesn't have to be ROHN 25-G or anything, just cheap, and fairly durable.

Hey, if you've GOT cheap ROHN 25-G, that's cool too! =)

If you've got a tower and want to get rid of it, send me a quick note.

Have a pair of McIntosh customized 4L4Ms. These speakers were made by McIntosh for close relatives of one of its top designers. They are more ornate with non standard grille cloth.

These are large units housing 11 drivers each. Four woofers, 1 midrange and a high requency array off 4 tweeters and 2 super tweeters.

Weighing in at over 200 lbs per they are not bookshelf units.

Condition is mint--they look like they just left the factory.

Serious offers only considered.

If interested please email me at Henrybii@aol.coml

Check quality of QRO Technologies amplifiers at
www.bright..net/~qrotec

I have used the HF-2000 model in the past; very well built with heavy duty components. Now use a Titan, so no biased interest. Also owned a 76PA when they were very well built.
QRO has a winner.

The primary complaint about the SMA connector is ONLY the lack of
antennas available. If more SMA antennas were available in various
lengths we all would be happy and noone would be complaining.

But right now its very slim pickins.

Raidos serve a varied user group. A varied selection of antennas is
needed.

In rec.radio.amateur.equipment Kirk James Smith <kjsmith@violin.aix.calpoly.edu> wrote:
: It amazes me to see people complaining about the SMA antenna on the
: FT-50. I've owned many handhelds in my time, and my biggest complaint
: about ham gear was the use of BNC connectors for antennas. They don't
: lock into place well, and the slippage tends to wear the connectors out.
: I've repaired or replaced BNC's on HT's more times than I care to
: remember.

: The SMA connector on the FT-50 was a HUGE selling point for me. Finally,
: a radio with a real antenna connector! You don't see Motorola, Kenwood
: Commercial, GE, etc using BNC antennas on their HTs, and it's for good
: reason. They're unreliable.

: Of course I seldom use my FT-50 for anything more than a handheld. I've
: done the "make your radio into an octopus" thing by using it as a mobile
: and base rig in the past, and it's marginal at best. I now have a base
: radio and a mobile radio, and the HT gets used only as a portable.

: Please Yaesu, don't change the antenna connector!

: I don't like the stock antenna... It's deaf and big. I use the Icom
: FA-S270B, which is deaf, but small. Enough to hit nearby repeaters and
: work close-in simplex, and remote through my mobile in crossband mode.
: I'm considering a Comet or Diamond SMA duckie when I need a bit more
: oomph, but I'm not interested in the 15" 1/4 wave antennas for 2m. I
: have one here somewhere (Diamond), and it's so big, it makes the HT less
: than useable.

>>>You will have to derate the max continuous output power.

I run a 1500 watt UPS off my solar supply CONTINUOUSLY!
It is a BEST Power true sine wave UPS.
I have had no signs of needing to de-rate it.
(It's powering my PC right now!)
I have used it to deliver power when the commercial supply failed
running at full load for up to 3 days. I have my large power storage
connected via 200 amp connectors to the UPS.
Perhaps the modified pseudo-sine wave units require de-rating.

>>This isn't usually true. A UPS which can sustain 200 watts for 10 minutes
>>can generally sustain it indefinitely. That's because 10 minutes is more than
>>long enough to reach thermal equilibrium. You do have to be careful when
>>looking at the ratings for the UPS, however. There is a peak surge rating,
>>and a sustained rating. The former is only valid for momentary starting
>>demands.

Excuse me . Most of my posts are correct or very close. Many hams have sent me positive E-Mail saying they enjoy my posts (entertainment value) plus great info on new equipment. Perhaps I was incorrect on the 440 MHZ being included. I will keep all hams informed of any worthwhile news in the future even if you don't want to hear about it.
Jerry if you hate my posts simply don't read them.

I don't believe that we are in disagreement. The nameplate rating of a standby
UPS should not be taken as its sustained rating. That rating provides for the
surge power needed to start fans, disk drives, etc. But it isn't the power level
at which the UPS can run continously, even for a few minutes. The rating I'm
talking about above is the one the UPS can sustain for 10 minutes or more.
A UPS operating at this level *will* have reached thermal equilibrium in under
10 minutes.

For example, the UPS I'm using has a nameplate surge rating of 800 watts,
but you can't draw 800 watts from it continously without disasterous thermal
consequences. At 200 watts, however, its temperature stabilizes in well under
10 minutes.

Well, what the ripples tell us is that the ultimate rejection of the filter is
not 100 db. It is in fact 80 db. There are radios using filters with better
ultimate rejection than that. Radios used in multi-multi contest stations have
to be better than that for example. They accomplish that with cascaded filters,
however. Kachina uses cascaded filters too, but as far as I can tell, only two of
them, an analog first IF filter and the DSP filter. I'm not clear whether the
displayed passband curve is representative of the radio or just of the DSP
second IF filter response. If it is only the latter, then it probably isn't a concern
if the first IF filter is similarly sharp. If it is the former, then the radio probably
won't be a good candidate for use at a multi-multi station.

6067. Swan 500

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-15 00:00:00 UTC
From: Samuel Johnson <samjohnson@Bledsoe.net>
Message-ID: <33A3FA35.372F@Bledsoe.net>
Source record: 172903

I have advertised this rig before and changed my mind about selling, but I think I'll give up on HF for a while and stick to VHF and UHF, The rig is a good Swan 500C with the 117v power supply, including mic. Rig is not 100% cosmetically but functions well but is definately not in bad shape. Non-smoker with me only, (Don't know about previous owner).
I would like to trade the rig for dual band equipment or 2 meter duplexers, a straight sale is an option, but a trade is my goal. E-mail me with any deals you have.
Thanks,
Sam Johnson

>I've repaired or replaced BNC's on HT's more times than I care to
>remember.

BNC connectors should be considered assembly connectors. Repeatedly
connecting and disconnecting them will cause rapid wear. But the SMA
is actually little better in this regard. The threaded coupling won't wear out
quickly, but the female center contact will quickly deform and become
intermittant from repeated connection and disconnection. Because it
is so small, it'll fail this way quicker than the center contact of a BNC.
If you're going to use a connector for repeated connecting and disconnecting,
you need to use one designed for that service, such as the QC connector.

>The SMA connector on the FT-50 was a HUGE selling point for me. Finally,
>a radio with a real antenna connector! You don't see Motorola, Kenwood
>Commercial, GE, etc using BNC antennas on their HTs, and it's for good
>reason. They're unreliable.

Actually, they aren't, though as noted above, there are better choices for
a connection which is intended to be repeatedly connected and disconnected.
There are worse choices too, however, F connectors for example. The big
problems with the SMA are the small diameter center contacts which become
deformed and intermittant after only a few connection cycles, and the small
shoulder in contact with the case, which makes them prone to breaking through
the case when a large moment arm, IE long antenna or stiff cable, is attached
to them. A proper antenna for this connector style has a shoulder which rests
against the case and relieves the strain on this small mounting area.

Anyone who repeatedly connects and disconnects either the SMA connector
on these radios or the BNC on other HTs, is going to experience rapid connector
failure. It's a fact of life. These connectors aren't designed for that purpose. About
500 cycles is all a BNC can tolerate. And if you aren't reasonably careful to make
sure the center pin is aligned when you connect to the radio, a SMA has an even
shorter life. If you intend to connect and disconnect on a daily basis, change to QC
connectors, or expect to have to replace the connector on your radio yearly, if not
sooner.

>Of course I seldom use my FT-50 for anything more than a handheld. I've
>done the "make your radio into an octopus" thing by using it as a mobile
>and base rig in the past, and it's marginal at best. I now have a base
>radio and a mobile radio, and the HT gets used only as a portable.

Right. HTs are for foot mobile use. They make a lousy substitute for a mobile rig or base rig.

6071. RADIO SHOW!!! IMPORTANT!!!

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-15 00:00:00 UTC
From: JClot64367@aol.com
Message-ID: <866387805.30569@dejanews.com>
Source record: 172907

I work in a radio in France and since May I'm a new user in Internet. IF YOU SPEAK A LITTLE FRENCH and if you want to participate to my show every Saturday, send me a *.wav file 11025Khz mono 16bit and tell me about classment of music in your countries. TIME LIMITED 90sec Your intervention will be diffused in France! If you want information JClot64367@aol.com Thank you.

6072. FS: ICOM 735 and accessories

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-15 00:00:00 UTC
From: Marty Purselley <brewer@flash.net>
Message-ID: <01bc79a2$46f119c0$ee091ed1@default>
Source record: 172908

FOR SALE:

ICOM 735 HF Transceiver (160m-10m general coverage receive)
-Includes: manual, mobile mounting bracket, scanning microphone,
DC power cord, and Fox tango CW filter
PS-55 matching power supply
AT150 Automatic Antenna tuner

All equipment is like new. Non smoker and never mobile.

Asking $800.00 OBO

Email if interested or need more details

Hello All;
I'm selling the "MFJ-1270CQ: MFJ TNC-2 Packet Controller Turbo Plus"
with the 9600bps modem installed. This tnc/modem has all the features
of the "MFJ-1270C" plus builtin 9600bps G3RUH modem for 9600bps AX.25
and 9600bps AFSK operations.
The MFJ-1270CQ is fully TAPR TNC-2 compatible with KISS interface,
MFJ Host mode * Anti-collision technology * Enhanced personal Mailbox
Plus Much more.
Included are all original docs, manuals, box and accessories. This
unit is still under MFJ's Unlimited 100% Warranty. It has less than
4 hours use. It's Basicly New Out Of The Box!..Reason 4 Sale: I just
bought the new AEA/Timewave DSP-2232 that includes all PacSat modes,
Wefax, SSTV & more.. Also I am a non-smoker
New it sells for around $229.99 +shipping. Asking $195 +shipping.
All cash offers will be considered..
Please call 1-609-386-9382 10am to 10pm Eastern Time..
Or RE: via Email to: n2rif@amsat.org
Packet: N2RIF@WM2F.SNJ.NJ.USA.NA
Thank You For Reading My Bulletin

Jerry,
Steve is not making this up, look at the 706 Mark II
display, when the backlight is set low , you can see
the outlined Letters of the unactivated in thee Upper Left
say DSP, ANF, and NR. Does not take a genius to figure that
out, and that 10 pin connector and space for the module!!
73

I bought the 7.2V 650maH MaHa NiMH for my FT-50 at Dayton and like it so far. I stopped at the MaHa booth at Dayton and asked their techies about charging the battery in my Yaesu NC-50 quick charger.

They said they have tested their packs with the Yaesu NC-50. They also told me the only drawback was that the quick charge will only take the pack up to about 80%. If you want a full 100% charge, the pack should be left in for an additional 3 to 4 hours after the NC-50 charger switches to trickle. If you look at the sorry excuse for a manual that came with the NC-50, they say about the same thing even for NiCds. I've found this to be true in practice so far also, both for the Yaesu NiCds and MaHa NiMH packs.

I've noticed in QST that there are a couple of manufacturers that now sell chargers that do both NiMH and NiCds, and they look strikingly similar to the Yausu NC-50...as in they scratched the Yaesu logo off

and put on their own.

On the sleep theory, I didn't have that with the MaHa battery, but I have found with my new laptop NiMh battery that it needed about 5 cycles to get it up to capacity. I suspect it was on a shelf for a year before I bought it.

Rohn does make such a thing. They also make a "rotor" top section for
the 25G with an internal rotor mount. Most distributors should have both
these available.

FS: Quantics W9GR DSP unit. This unit was originally featured in 9/92
QST. I've upgraded it to the 10 function unit. The unit will fit in
many speaker enclosures. Mine was mounted in a Yaesu SP-5. The
controls are mounted on the "freq response" plate, so if you have a
Yaesu speaker, this would slide right in.

Yes, but I understand you must put the CD back in the
drive every third time you start the program!? Most of us
wish to leave one of the call sign data base CDs in the
drive just about all the time. According to the author,
that is just the way it is, copyright protection, I guess.

Like an S100 box? Is big, bulky, and clunky what we really want?
What sells would seem to contradict that idea. If that's what
hams wanted, most would own big, clunky Ten-Tec boxes filled
mostly with air and an assortment of modules wired together with
connectors that suffer chronic oxidation problems leading to
infuriating intermittant behavior. But most hams seem to like
nice compact little radios which are highly integrated.

>As consumers, we should INSIST upon it and help these manufacturers
>design what we REALLY WANT.
>
>Who wants to be hosed every year as new models come out and
>transcend the features that they just invested in...are we supposed
>to buy new radios every year?

Well, apparently amateurs do, since they seem willing to chunk the
radio that they "just had to have" last year in the garbage and buy this
year's model. The manufacturers and ham stores like that, of course,
since it keeps them in business. Amateurs seem to like it too, why
else would they scrap radios that made them delirious with joy only
a year ago?

>The HARDWARE should be modular and the SOFTWARE should be
>upgradeable and the feature sets should come from US!

Modular hardware will add cost and bulk (and likely reduce reliability). Is that
what amateurs really want? It appears to me that the demand is for more compact
and inexpensive radios instead. It can cost less, and take less bulk, to produce
highly integrated radios than it would to produce highly modular and configurable
radios. How many people bought an IC900 in preference to a compact dual bander
they can hold in their hand?

I agree that firmware should be upgradable. But how much of that really exists?
It appears that upgraded firmware only appears when upgraded hardware requires
it. That won't retrofit into a radio without the upgraded hardware (see hardware
above). Bugfixes should be issued when needed, but that appears to be relatively
seldom.

As to why the radios aren't designed in the US, there are two answers to that.
The first is the obvious one that they aren't built here. But there is a more
important reason as well. And that is that the US amateur market is a relatively
small percentage of the world amateur market. The radios we buy aren't designed

exclusively for us (unless they are 222 MHz radios). They are designed for a world market which may have other priorities (regulatory as well as operational) than we do in how they think a radio should work.

Note that I tend to agree with you that there are some really brain dead decisions made in the amateur market from time to time. But I don't think that's exclusively the fault of the manufacturers. They're in the business to sell radios, and as long as we buy them, they're happy campers.

And I think that they *do* listen to what we want. I'd say the IC706 Mk II is an example of that. They fixed almost everything we didn't like about the original radio while retaining everything we did like about the older radio. If they weren't listening, then why the Mk II? Now I know you want them to "upgrade" your old radio, but is that realistic? They've apparently made changes to every board in the radio to fix the things we didn't like, and wrote some new firmware to drive it. If they offered an upgrade, the only thing left from the older radio would be the case. It is likely that the labor to do the upgrade would make the upgrade cost more than a new radio. Does that make any sense to you? It doesn't to me.

I've modified my 706 to solve the problems it had which annoyed me. And I throughly enjoyed doing so. It challenged me to examine where the (IMHO) mistakes were made and to develop fixes for them. There are a few things the Mk II offers which would be nice to have, but I can live with the old radio as modified by me. So I'm not going to be a lemming
and toss it in the trash and spend $1200 to get those few features. I hang onto my IC735 for
the same reason. It does what I need in a sufficiently competent way. Sure, I like some of the
features of the new IC756, but I don't like them $2,000 worth. If you do, fine, go buy one. I'll
wait until I can buy it from you for half price because you just have to have next year's model.
Then I'll modify it if it does things that annoy me. I don't expect to be able to upgrade my
IC735 to an IC756 in any other way.

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author.]

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their crystal controlled, transistor Plectron and Motorola desktop monitor receivers. They have now been replaced by battery operated portable pagers, and the desktop models are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. They are desktop models which can be powered from 117VAC or 12VDC with the proper mobile cord. The audio quality of a Plectron P1, Plectron 700 series, and Motorola Alert Monitor is far better than any consumer grade scanner and the sensitivity, image rejection, and intermod immunity is outstanding when aligned properly.

The Plectron and Motorola Alert monitors are single band receivers: VHF-low, VHF-high, or UHF. No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

AC power cords for both types of receivers use unique connectors and are scarce. You can buy them new but it's much cheaper to drill a hole on the rear panel and attach a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. You can also get Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectrom SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model UHF VHF-high VHF-low

SM-301 X X X
SM-302 X X
SM-303 X X
SM-304 X X

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

Hello All,

I am looking to buy some Blue LED's but the mail order place I
bought them from doesn't advertise in Nuts'n'Volts. They are
in St. Louis but don't remeber their name or 800 number.

I would appreciate any info.

Thanks,

Brad - N9DTL / ZF2UG

6096. Re: New Icom 706 mkII IMPROVED!!!, (DSP Ready?? Maybe !!))

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-15 00:00:00 UTC
From: Michael Aust <maust21401@earthlink.net>
Message-ID: <33A3EA19.7628@earthlink.net>
Source record: 172971

Joe ,

I have an Icom 706 Mark II, and previously had the
original IC-706.

I really like the 706 Mark II, it is very much improved
over the original IC-706 in design!!

The Mark II VHF 60-200Mhz receiver was greatly improved
in many ways.

The New Icom 706 Mark II is major changed radio and
simple mods done to a 706 will not make it a Mark II.

These are my observations on the New Icom 706 Mark II
from a technical side.

Icom fixed the 60-200Mhz receiver, to be more sensitive.
The new Mark II has additional selective front end filtering
to cut out image response(means better than 3dB improvement
in RF to IF noise Figure).

A quick inspection in the Mark II has a new VHF RF Front
End (60-200Mhz), with additional preselect varactor tuned stage
to cut out images. Use to see Aircraft band 118-135 portion get
blasted by FM BC band. If you turned on the preamp, the signal
got actually noisier while the S-meter went up. Now its just the
opposite, when using the preamp, ithe signal gets more quieting
in the receiver, and S-meter goes up!!(like it should).

Additional, the front end has two back to back diodes to
protect the front end from 6 meter tx, along which is a shunt
diode to mute the 60-200Mhz front end when operating the HF-6
meter portion (prevent front end damage to high RF signals.
If you on 2 meters and transmit with another mobile on two
next to each other, well that may be ?? to how much you can
protect the receiver. This change really helps the RF burnout
issue on the original 706's if mistreated. Still use my Comet
duplexer with the next 706, as well as the old 706, and never
had a front end die. My suggestion to you is get that duplexer
or just have one antenna at a time on the radio, use a coax switch!!
Just have to exercise a little caution and common sense, and you
original 706 front end should last as long as you have the radio!!
I use the Duplexer or switch method on the new Mark II. You can not
pump watts into the front end, it's just plain semiconductor physics
my friend. Use a little prevention, and you will not have problems.

Also the FM broadcast WFM 88-108 reception was improved greatly!!
If you put a long wire on the FM BC band (88-108) and had many strong
FM BC signals into the IF spaced close together, the IF filter was
not sufficient to separate the signals and would mix and you could
hear 2 - 3 FM BC stations while listening to to FM BC station.
Now the the Icom 706 Mark II, this was fixed, now the radio hears
only one station, does not exhibit this with the new IF filters!!
Additionally, the S meter now works in the FM BC-Band on WFM along
with the spectrum Scope, (original 706 did not). The also increased
the Scope to have a 0.1MHz steps which is handy in the FM BC-Band!!

The transmit audio is much better, with with wider SSB filter
than the orignal 706 and changes to the Microphone/Audio circuitry.
NO more comments that Alinco's sound's better, Actually I think the
new Icom 706 Mark II tx audio is even slightly better than the DX-70,
which I have!!

You can now cross band tx between bands, before the original 706
could not!!

They added the Tone CTCSS PL Squelch receive, which is really nice
on busy VHF frequencies.

The Power Amplifier has been modified to a new design to have
thermal shutdown protection if it gets too hot!!, along with
a thermal Fan switch. The Ip3 performance has been improved with
a new Bipolar Design on the 706 Mark II, as opposed to the MOSFET
PA used in the original 706 with less Linearity.
Also, the casual ham will not notice this, but if you turn on the
706 Mark II, and set the display to the low light Setting ond tilt the
LCD display , you will see the words DSP , ANF, and NF. It does not
take a genius to figure this out. We all may see an DSP option being
offered for the Mark II. These labels are seen since LCD displays
employ liquid films that change densisity due to the chage presented
to them, while unactivated looking straight on, seem invisable, but at
an angle the fine sub micron film depth relects light slightly
different to to the properties optical light transmission through
different thickness films. When activated the thickness is changed due
to the charge and the LCD display becomes visable. For appliance
operators that are not enginneres, this is the simplest explanation.
Tjhe point here is that the Icom 706 Mark II, possible will have a
SP board option. Looking one the Botton is a 10 pin connector next to
the audio section of J4 and a section about 2inch by 3inch to accomodate
a possible audio DSP module. I know this will be denied by Icom and be
called a plug as a test point!!! (But they even denied there was
a Icom 706 Mark II)!!!
So my friends, I am waiting for the DSP option.

Moving along, I went to London to try the 706 and 706 Mark II
before it made it's day in the USA and found that the HF reciever
seemed better on 20meters, almost like less IF gain, anyway, to
listen the radio with the new lager speaker in it, it sounds
much better!

The noise blanker on the old 706 was useless, thre new Icom
706 Mark II noise blanker, really works well in the car on
auto noise type pulses and on AM can be switched off. I could
never use the original NB on SSB with strong signals with the old
706, Now the new Noise Blanker works quite well.
I like the 20Watts on the New Mark II as opposed to 10Watts, I
use the Mirage B2530 Amplifier and get near 300 watts out for 144MHz
SSB work!!!.
I really like the quick menu for band change and the new RIT functions.
Anyway, everyone knows of the applicance operator improvements.
The meessage here is about the technica improvements in the New
706 Mark II versus the original 706 from an engineer's
perpective!!

Hope this helps you, waiting for DSP option .
73

Mike

The Front end seems more selective, by inspection between
the 706 and Mark II, it appears that a Varactor tuned stage is
Front end to cut down on image reso

To disable the beep hold the Notch button in while turning the power on.

To do a system reset hold in the Up and Down buttons while turning the power on. Note that this will clear all memories and return settings to their factor default.

Actually Steve we do remember your "Mark II" story and are still
waiting for the 70cm coverage you promised. Does making this stuff up
make you feel important? Remember EVERYTHING you post to the news
groups is available on Dejanews so you can't change the story later.

As the sign down at the feed store says, "I'm a bit of a BSer myself
but I really appreciate watching a professional at work."

BTW please no more romantic stuff to my email I don't appreciate the
threats or the profanity, thank you.

There are two mobiles on the market for 222 MHz ...
The Kenwood TM331A
The Azden PCS7200
Both are in the area between $400-$500.

There is one dual band radio on the market, which covers 2
meters and 222 MHz -
The Kenwood TM642A (or, with backlit microphone,
The Kenwood TM642AD
This radio has a slot for one additional module (available
for 10 meters, six meters, 440 MHz or 1200 MHz).
This radio sells in the mid-$700 range.

With so little 222 MHz activity (on a world wide basis - no
flames please - 222 MHz is only a ham band in North America,
and is only really very active in the major metropolitan
areas), the manufacturers have been reluctant to commit a
lot of development work (read $$$) into a new radio for this
band.

Hope this helps!

I have for sale a Kenwood TS-870S HF Transceiver with the optional SO-2 TXCO unit. I have all accessories that were shipped with it. I purchased it as a Christmas present to myself on December 23, 1995. I used it approximately 4 months, and packed it back up in its original carton. The control program that came with it is included along with operators manual for the transceiver. Unit is immaculate, and has been in a smoke free environment. Paid over $2400.00 for it. I'm asking $1700.00 plus shipping.

I also have a couple of Kenwood SP-41 mobile speakers. Asking $25.00 each or both for $45.00 plus shipping.

Call me at (972) 962-3595 between the hours of 10 AM to 2 PM weekdays, and after 10 AM weekends.
Email dkiefer@altinet.net

Reason for selling? I've gotten out of ham radio.

Thanks es 73 Don W5QXK

Did you ever think it may NOT be profitable to produce such an item ?

I do not think any amateur manufacturer would produce an item they
could not make a profit on, ie; recently look at the Z1A, ICOM gave
them away at $319.00. It did not sell so there was no profit being
made

Likely these chargers are knock offs. There are a few " ICOM "
chargers that are knock offs. The ones I've seen have a switch for
110 to 220 volts where ICOM required changing of the internal
transformer.

Hi, I'd like to add my 2 cents. I have a GAP Challanger and in operation for the last two years. Works very well. There are small tricks you can do to it to make the SWR come down. The SWR stock on the bands it is spec'd for is OK, most are less than 2:1 but you do not get the entire band on 80. 40, 20, 10,15, and 2m has SWR less than 2:1. If you extend the tubes alittle you can get SWR's down to 1.5:1 or less. Cut the 3 25ft counterpoises to about 24ft each and you get an incredible 1.2:1 on 40m almost the entire band. 80M must have the cap on the top of the

antenna changed if you want to work another range of the 80m band. I did tests comparing this GAP to a 20M dipole up at 30ft, and found the GAP to be less noisy for some reason. The manufacture claims the vertical to be less noisy than most other verticals and he seems to be correct, as far as I went in my testing process.

I have to agree somewhat with "the english/spelling teacher." People's
ignorance of good grammar and spelling today is just appalling. Did
they stop teaching this in schools 10 or 20 years ago? There's not
much sense in writing something if you can't spell or form good
sentences. Now all you flamers out there can jump right on this, but
you know it's the truth.

I have a friend who recently picked up a Yaesu FT-747 and he's looking to remotely mount the control face. He doesn't have, however, the cable to do so and AES and other suppliers claim not to carry such an item.

The part number for the cable is RMK-747

Anyone who may have one for sale, or that can direct me to a source for this cable -- PLEASE WRITE...

Email me directly with your responses and I'll forward them to my friend, Neal, AA8PQ.

Thanks very much in advance!! 73!

There was a post regarding this last week. Go to:

www.cbgazette.com

They have a clear set of instructions on converting this handheld to
10M operation, and a review of the radio.

I haven't tried it myself, but would be tempted to do so. It could be
fun!

Greetings all,

I am unable to determine the Shimano "Line-up".

I know the Deore LX/XT/XTR are above the Alivio and STX..
But which is better STX or Alivio?
I see STX components on lesser bikes than the Alivio..and visa-versa.

Any insights?

It looks like a fun unit and covers all of SSB portion of 10 meters.
What we need to do next is find a mod to add "0" channels.
Currently their is no provision for channels like 28.450 or 28.400.

Mike,

I don't doubt the letters are there. It is what Steve speculates that I have a problem with. Perhaps Steve is right or perhaps they are just there for future use, the point is Steve doesn't really know, he is doing just what you are doing, speculating and drawing conclusions based on flimsy evidence. The difference is that Steve CLAIMS to have some sort of inside knowledge I believe this claim to be meadow muffins. As you can see following this thread he already has people believing DSP will be offered soon. This just leads to heartburn for Gary Fibre and /gary is a really nice guy. The whole thing is about Steve's ego and need for attention not equipment.

Hello
Do you have soom equipment for sale.Well when you post a Forsale
message on this newsgroup you can now send a picture too the person
that would like to buy your equipment.This will allow him to see what
you have for sale and what kind of shape it is in before you send it
to him.
How can you do this.Simple.Just take a picture of the equipment you
have forsale and send it to me by snail mail.Inclued your e-mail
address and 50 cents.When I get your picture I will scan it and send
it back to you by e-mail.
Heres the address

>design what we REALLY WANT.
>
>Who wants to be hosed every year as new models come out and
>transcend the features that they just invested in...are we supposed
>to buy new radios every year?

Who indeed? Which is why at Ten-Tec we have a long tradition of upgradeable pieces of equipment and for constantly seeking to improve our gear through suggestions provided by users of our equipment. We have provided software upgrades at a nominal fee for years for our top-of-the-line transceivers. With the addition of the new Omni-VI Plus we listened to our transceiver owners, who told us among other things that they didn't want to spend $2500+ on a new rig that was going to be obsolete in the next 12 months, after already making a sizeable investment in Ten-Tec with the Omni-VI. BOTH the hardware and software are upgradeable together or separately to provide you with the option of a full upgrade for your Omni-VI or just adding the enhanced DSP features. Adding the new VI+ DSP chips can be done without even sending us the transceiver.

>Some of the implementations are anemic and some of the missing features
>prove that people who aren't USING these radios are playing too big a
>role in DESIGNING them!

We use our transceivers, and we listen to the suggestions made to improve them. We have done that with each successive piece of equipment we have ever manufactured. Every one of our engineering staff is a licensed amateur. You'll hear Ten-Tec employees on the air every single day using our equipment. We use them in contests. We use them on 75 meters. Mobile CW. Driving transverters (our own) for VHF use. This morning's main topic of discussion in Sevierville was not weekend sports; it was the 6 meter E-skip openings in this weekends' VHF contest.

>The HARDWARE should be modular and the SOFTWARE should be
>upgradeable and the feature sets should come from US!

Absolutely! We have upgraded software for our transceivers each year for the past several years. You can even call us if you have an out of production older transceiver model and purchase the latest

software, even though we may not build that particular model at present. All upgrades to the Omni-VI and Omni-VI Plus have come from user suggestion, and will continue to in the future as we add more features to our rigs. Who else does this?

>Why is it that the radio manufacturers WWW pages don't solicit
>opinions from their users? No email inputs exist that I've
>seen other than notes to their "webmaster" so you can complain
>about slow loading graphics and such.

We have a direct e-mail link from our web site to my desk. Any e-mail you type in to Ten-Tec from our web site regardless of subject matter will be read by us. We not only read our electronic mail, but respond to it as well. Reach us directly at <sales@tentec.com>. For an independent opinion from people that use our equipment and have experience in dealing with us over the last 29 years, send a message to the Ten-Tec Internet Reflector at <tentec@contesting.com>. Ten-Tec has no connection with the operation or maintenance of this reflector.

We do things differently from other companies involved in the amateur radio industry. We don't use the amateur radio dealer network. We have an unmatched trial policy on "test-driving" our equipment. We have an unparalleled service reputation and we fix anything we have ever built going back to our very first PM-series QRP rigs in the late 1960's.

And if that weren't enough, it's American made.

><and now, WD1V steps off the soapbox, stretches, and takes a

A mistake!

Maha also recommends to us that we do NOT use quick charers on
their NiMH batteries.

Well, at least if you desire approximately 2X the life out of them.

Sad but true - unless you own a chargers specifically designed for
NiMH batteries, you have to go out in your garage and find those
ugly little wall warts that originally came with out HTs.

You can convert the PC 122 to 10 meters by replacing the master ref.
oscillator crystal and realigning. Of course, you would only get 40
frequencies.

I have _not_ specifically heard this model radio on 10, but I have heard
the MB8719 chassis on 10-i.e. Pres. Grant XL, Washington, Cobra 148,
142, by changing the crystal.

The MB8719 has a much greater frequency selection capability, since you
can expand them to go from 26.815 to 28.085 with the stock crystal.
The 858 will go even wider, but they don't use that chassis anymore that
I know of.

If that is the case then why the "DSP" and "NR" on the display.
Also, why the big 2 x 3 space with a connector that is in the audio
output section of the radio. Did Icom plan on DSP and then disband the
idea for one reason or another?

6166. Reduced output on Kenwood TS-570D HF tranceiver.

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-16 00:00:00 UTC
From: Bjarke <bjmko@tdk.dk>
Message-ID: <33A58EA0.62519B49@gatekeeeper.teledanmark.dk>
Source record: 172792

Hello radio amateur freak

I have a Kenwood TS-570D HF tranceiver and like to use it in combination with a transverter for going SSB on 144MHz.

My home build transverter want an input signal of max. 100mW for transmitting but my TS-570D deliver min. 5000 mW (5W).

Do you know if it is possible to reduce the output signal of the TS-570D transceiver to 100mW - by push any buttons on startup or something like that?

What else can I do - 34 dB attenuation is quite a lot.

Yours faithfully

OZ2BKK /Bjarke

6167. *NEW* Kenwood Reflector!!!

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-16 00:00:00 UTC
From: ShortCkt <ShortCkt@primenet.com>
Message-ID: <33A5F846.3C9C@primenet.com>

NEW Kenwood Reflector!!!

Kenwood is a mailing list (reflector) devoted entirely
to equipment manufactured by the Kenwood Communications
Corporation (Amateur Radio Products Group).

* equipment, accessories
* repairs, modifications, enhancements
* questions, discussions, etc
* buy, sell, trade, swap

To be added to the mailing list, send email as follows:
TO: majordomo@qsl.net
SUBJECT:
BODY: subscribe kenwood

To be deleted from the mailing list, send email as follows:
TO: majordomo@qsl.net
SUBJECT:
BODY: unsubscribe kenwood

To post items to the reflector, send email as follows:
TO: kenwood@qsl.net

If you have questions or need assistance contact: k7on@qsl.net

-----

HomeBrew is a mailing list (reflector) devoted to amateur radio
and electronics experimentation and construction:

* building kits
* scratch construction
* radios, antennas, widgets
* design
* accessories
* station construction
* digital, analog, uP
* repair, modification, surplus

To be added to the mailing list, send email as follows:
TO: majordomo@qsl.net
SUBJECT:
BODY: subscribe homebrew

To be deleted from the mailing list, send email as follows:
TO: majordomo@qsl.net
SUBJECT:

BODY: unsubscribe homebrew

To post items to the reflector, send email as follows:
TO: homebrew@qsl.net

If you have questions or need assistance contact: k7on@qsl.net

---

Ham-Books is a mailing list (reflector) devoted to the literature
and periodicals of amateur radio:

* publishers
* magazines
* newsletters
* books
* old and "collector" books
* new book announcements

To be added to the mailing list, send email as follows:
TO: majordomo@qsl.net
SUBJECT:
BODY: subscribe ham-books

To be deleted from the mailing list, send email as follows:
TO: majordomo@qsl.net
SUBJECT:
BODY: unsubscribe ham-books

To post items to the reflector, send email as follows:
TO: ham-books@qsl.net

If you have questions or need assistance contact: k7on@qsl.net

---

Ham-Software is a mailing list (reflector) devoted to software
of all types used for amateur radio:

* logging
* propagation prediction
* digital modes
* award tracking
* commercial, shareware, freeware
* electronic design and simulation
* amateur software development

To be added to the mailing list, send email as follows:
TO: majordomo@qsl.net
SUBJECT:
BODY: subscribe ham-software

To be deleted from the mailing list, send email as follows:
TO: majordomo@qsl.net
SUBJECT:

BODY: unsubscribe ham-software

To post items to the reflector, send email as follows:

BODY: subscribe fox_tango

To be deleted from the mailing list, send email as follows:
TO: majordomo@qsl.net
SUBJECT:
BODY: unsubscribe fox_tango

To post items to the reflector, send email as follows:
TO: fox_tango@qsl.net

If you have questions or need assistance contact: k7on@qsl.net

---

Mobile-Portable is a mailing list (reflector) devoted to mobile
and portable operation of amateur radio (QRP and QRO, HF and VHF+):

* rigs, antennas, tuners
* installation
* batteries
* generators
* solar and alternative energy
* camping/RVs/backpacking
* laptop/palmtop computers
* portable packet
* roving and mountain-topping
* GPS, APRS

To be added to the mailing list, send email as follows:
TO: majordomo@qsl.net
SUBJECT:

BODY: subscribe mobile-portable

To be deleted from the mailing list, send email as follows:
TO: majordomo@qsl.net
SUBJECT:
BODY: unsubscribe mobile-portable

To post items to the reflector, send email as follows:
TO: mobile-portable@qsl.net

If you have questions or need assistance contact: k7on@qsl.net

---

BitBucket is a mailing list (reflector) devoted to
specialized amateur radio communication techniques.

-SSTV, ATV, FAX, APT, DSP, QRP, APRS
-Packet, Pactor, GTOR, Clover, AMTOR, RTTY
-R/C, Telemetry, Balloons, Rockets, Robotics
-homebrew, modifications, interfacing, widgets, etc

As we encourage the free exchange of ideas, if you pay for
email service by the byte you may want to consider carefully
before subscribing.

To submit materials:
TO: bitbucket@qsl.net

If you have questions or need assistance contact: k7on@qsl.net

---

bit bucket /n./

1. The universal data sink (originally, the mythical receptacle
used to catch bits when they fall off the end of a register
during a shift instruction). Discarded, lost, or destroyed data
is said to have `gone to the bit bucket'. On Unix, often used
for /dev/null. Sometimes amplified as `the Great Bit Bucket in
the Sky'.

2. The place where all lost mail and news messages eventually go.
The selection is performed according to Finagle's Law;
important mail is much more likely to end up in the bit bucket

than junk mail, which has an almost 100% probability of getting delivered. Routing to the bit bucket is automatically performed by mail-transfer agents, news systems, and the lower layers of the network.

3. The ideal location for all unwanted mail responses: "Flames about this article to the bit bucket." Such a request is guaranteed to overflow one's mailbox with flames.

4. Excuse for all mail that has not been sent. "I mailed you those figures last week; they must have landed in the bitbucket." Compare black hole.

This term is used purely in jest. It is based on the fanciful notion that bits are objects that are not destroyed but only misplaced. This appears to have been a mutation of an earlier term `bit box', about which the same legend was current; old-time hackers also report that trainees used to be told that when the CPU stored bits into memory it was actually pulling them `out of the bit box'. See also chad box.

Another variant of this legend has it that, as a consequence of the `parity preservation law', the number of 1 bits that go to the bit bucket must equal the number of 0 bits. Any imbalance results in bits filling up the bit bucket. A qualified computer technician can empty a full bit bucket as part of scheduled maintenance.

Hello OMs,

did already someone notice, what happens when you hold the
Funktion F3-Key pressed while power on?
In my Version, the word EMERGENCY appears on the display and the
radio switches to the Frequency 4.630MHz.
What is this good for? For which kind of User is this supported?
Thanks in advance,

73 Marcus

Since this is comp.sys.ibm.pc.hardware.cd-rom

How about trading it from a CDROM drive?

Oh, and what would you think of the folks at a magazine
or other publication who put out something like that? You
wouldn't give them much credibility, I think. Why wouldn't
you expect folks to try to communicate effectively? Do you
really think anyone is taught in school to use exclamation points at
the end of every sentence? I don't pity anyone who merely excuses
poor communication skills without another thought. Considering the
illiteracy in the world, we can do better, and should encourage it. I
encouraged improvement with a suggestion, though I admit it had a
negative feel to it. Think what you want of my credibility. But don't
give me any pity. Besides, most folks who use exclamation points
so profusely know better. They only do so to try to add unnecessary
emphasis or to cover up weak writing. My apologies to the person
who wrote the original post, but you don't need to stick up for him.
He's a big boy, and I'm sure he can take care of himself.

Mike

6173. Radio Shack HTX-212/242 Problems

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-16 00:00:00 UTC
From: "Gary E. Euler" <downeast@ij.net>
Message-ID: <33A4FB3E.289A@ij.net>
Source record: 172799

Hello to all

Has anyone out there had any problems with their RS htx-212/242
mobile radios. We had a few with the PIN switching circuit burning
a hole through the circuit board. Also the final breaks into
oscillation on the HTX-212 in high power (45 watts). We also have found
the HTX-242 radios are having a problem with the CTCSS and DTMF not
having the right frequency and or low deviation. If you have seen these
problems with these two radios please e-mail me with the details of your
problems and what Tandy did to resolve the problem. A few of us have
been burned by Tandy with these products. I myself went through six (6)
radios starting with the HTX-212. I now have the HTX-242 and I still
have problems with the radio, the deviation is too low on the DTMF
output from the radio. There is no DTMF/CTCSS level control. All
signals go to a single deviation control (RV1) per the schematic.
Please e-mail me if you had problems. We need all the support we
can get on this matter since Tandy states that the radio has no known
problems. If you are going to purchase any of the amateur line from
Radio Shack, do yourself a favor and get the extended service (TSP).
Thank You
Gary

I just called to order another antenna for my FT-50 and chose the
Diamond SRH-519 based on favorable messages on the USENET.
Much to my surprise the dealer told me they wont sell them for the
FT-50, as Diamond has notified them that those antennas and not
reliable. It seems there is a problem that the center pin makes
intermittent contact so Diamond has halted sales/manfuactuing on that
antenna.
I called Diamond and they confirmed.

MFJ-422C keyer / Bencher paddle combo on page 91 of the AES winter 96/97 catalog. A basic keyer and great Bencher black base paddle with gold contacts. Like new, in original box with manual. Used one time, now no longer needed. Excellent physical condition, works perfectly. Purchased last week from Amateur Electronic Supply for $124.95. Now $80. Jim, KA3CYW.

6184. Re: ICOM 706 MK II DSP ?????

Newsgroup: rec.radio.amateur.equipment

Love my new Icom 706 Mark II, its a real dream machine,
now was that a dream I had about the DSP module??

Bet Yaesu ans Alinco hope I was, anyway I buy one if
they get the bugs out. DSP in the new 706 Mark II would
be super neat!!!!

Greetings Steve,

The 70cm band business was a big goof which you tried to brush of as
trivial. I guess correct is in the eye of the beholder.

I don't hate your posts I just get a little uncomfortable when you try
and pass off speculation as fact. It kind of reminds me of a guy I used
to work with, he would pass on every rumor he came across. If he got
lucky he said, "See I told you guys." if it didn't pan out; silence.
Sound familar Steve.

Thank you for not cursing me in my email.

Jerry

It's an A.M. transciever that was on the market very briefly some years
back - worth far more as a curiosity than anything else. The company
folded very quickly.

I suggest that both original 706 and MkII owners put pressure on Icom to buy back the pieces of crap they are trying to pass off as state-of-the-art amateur radios. I realize that a jack-of-all-trades type of radio will not be a master of anything in particular, but my 706 is virtually useless. No more Icoms for me. They burned twice in the last five years. Fool me once...

Hello, I just bought one in Dayton and am pleased with it...I got it with the drycell pack and no Nicad or charger. It realy sucks the alkalines down (1.5amps) on transmit, but that is to be expected(Watt's Law).
I'm still finding new functions. I think it the best value for the money, for the features. I am looking for a Mod to open the transmit up to get to the Family service freqs. Some HT's recieve other bands,eg 100,300 and 800 mhz but how often do you need that. I'll by a walkman to listed to 100mhz fm, and there is nothing on 300...maybe 800 to listen to cell phones.
They realy improved the operation of the radio over the old DJ-560 which was difficult to operate with one hand. Thats it!
I did get a nicad pack yesterday...73 Mark N8REZ

I have heard that reasoning before and I just do not buy it. Take the Kenwood 331. It uses the same case, mic, etc as their 2M rig. What research and development costs could there be? They have the same features except the 222 rig has only 25 watts.

They charge $200 more for the 222 rig compared to the 2M rig. They look identical except for the model number on the outside. Why $480 versus $280?????

If the manufactures had them for a decent price, they could probably sell a lot of them. Here in Southern California, there are 118 open repeaters on 222 versus 41 on 440. IN my neighborhood I can reach four open 440 repeaters and 18 open 222 repeaters. Almost all of the 222 repeaters are open (about 86%) versus about 9% open on 440.

It seems to me that 222 is more of a true Ham band instead of a private phone patch system that 440 has become.

Steve

It seems that I heard of a way of using a 9 volt battery and pot to put
a negative voltage on a pin on the back of a Kenwood 140 to reduce the
voltage all the way down to zero, to use a tranverter. I'll look for the
notes on it. 73 Mark

Maby the plug and display etching are to connect it to the 708
(2,220,440,6m, hf rig) that will have DSP. They could be connected to
use as a satelite rig or Cross band repeat!

Bjarke wrote:
> What else can I do - 34 dB attenuation is quite a lot.

Hi Bjarke, you can build an attenuator. My ARRL Handbook has 50 ohm pi and 'T' attenuators ranging from 1 to 60dB. Also, your dB calculation seems to be for voltage yet you gave the requirements in watts. 10*log 5000/100 gives me 17dB. For 5w in and 0.1w out, the two parallel resistors in a pi attenuator should be 66.4 ohms and the series one should be 173.4 ohms, non-inductive. The first parallel one needs to have a 5w rating. Five 330 ohm 2w carbon resistors should do the trick.

> kr4wm@sccoast.net

Try some round torriods around the line running between the vcr and the television. Most rfi sees a length of wire as an antenna and the signal will enter at that point. Some times it can come in through the ac line as well. A solid ground for the rig ,amp,and tuner is a must. A good low pass filter will help also. You can usually get torroids at a hamfest for a buck. If one does'nt do it try 2. Hope this helps. Jim

I work at NASA and talked to one of the sattelite rf engineers regarding the SMA on my yeasu. He says they use them almost exclusively for the microwave work they do -- but he told me something that I found really interesting. He says they're only designed to be used once! Essentially, when an SMA is connected and tightened to the specified torque, the connector is SUPPOSED to deform to insure a solid, reliable connection, and any subsequent use suffers. Now, that hasn't stopped me from occasionally connecting and siconnecting the antenna on my yeasu (for foxhunts, for instance), but it definately reminds me to be careful with it.

Source record: 172682

On our FT-50, we use the SMA to BNC connectors. This solves the wearing-out problem, and it allows the use of many other antennas that can be changed quickly. We mostly use the MFJ 1717 dual-band long skinny ducky. It works great.

I also use the MFJ 1712 collapsable dual-band, and a 2-meter half wave (very carefully). When the BNC part of the connector wears out, it can be easily replaced.

So what if the conector looks ugly. It pushes the antenna and RF a little higher out of your face. 10 months so far and no problems.

Steve

I am trying to get my KAM all mode to do FSK on my Kenwood TS-450S. I wired the plug as directed to the back of the radio (the big 13 pin plug), but I have no luck getting FSK to work. PLUS, when the plug is in the radio, SSB goes to crap. There is so much garbage on my signal, you can't make out any voice, even though kenwood claims that the two are isolated.

Any help you can be in getting these two devices connected would be appreciated.

I bought one about 2 months ago and so far have been quite happy with it.
I'm fairly new to amateur radio, so I don't have much to compare it too.

The output is a little low with the alkaline batteries (1.8W) but I've been
able to hit just about every repeater in the Seattle area. Its very easy
to program, although a computer interface would have been nice.

I opted to replace the little rubber ducky antenna with a telescoping one
(cheap Radio Shack model) and have much better reception. I mounted a
simple homebrew antenna on the roof that works exceptionally well.
The abilility to tune in almost anything from about 130 - 200 Mhz is also a
nice little features. I programmed in the local weather stations as well
as some ES and police stations.

One annoying little item, as the alkaline batteries get low, when you go to
transmit, the unit basically recycles power. I guess that could be a good
thing, since you know exactly when to replace the batteries.

So far a very happy customer....

> for our purposes.

The better manufacturers test to 10 and sometimes 100 V/m; however, these
levels
can easily be exceeded by even an HT.

Some UPSs lose regulation (going up and down in output voltage), some shut
down,
and some BLOW UP !

I once went into a room full of different brand UPSs with my UHF HT to see
"what
would happen."

The Best, APC and really cheapo square wave inverters were only minimally
affected
(the real cheap units were just a few power transistors and a transformer,
essentially).
The worst was some voltage sagging when the HT was real close.

There was a large Best unit (5 kVA) that would shut off completely whenever
the HT
was keyed anywhere in the room, though.

Other units, off brands, were sometimes pretty sensitive.

But the most sensitive was this Exide unit that EXPLODED! Sparks and flames
came out of every vent hole violently. The design was an inverter section that
produced + and - aprox 200 VDC and some MOSFETs or IGFETs (or someother)
arranged from these rails to the output. The FETs were directly driven by a
microprocessor (no hardware interlock) which was quite far away on the PC
board. The long traces must have picked up the RF and turned both the high
and low side FETs on at the same time. Ooops.

That unit is no longer in production, but there are plenty of them around that will
find there way into the surplus markets...

I don't remember the model but it had a vertical style case and was about 14"
high and about 5" wide.

6222. Need help using HP Logic Analyzer

Newsgroup: rec.radio.amateur.equipment

Help please.

I have two HP 1631D logic analyzers. I don't know how to use
these instruments and don't have an operators manual, just
the service manual. In attemping to confirm operation in all
modes I run across the same problem in both machines.

When I select Timing and/or Analog operation only everything
seems to work just fine. When I select State channels I get an
error message "WARNING Slow Clock" and it won't run
in any trace mode.

Am I doing something wrong or do both machines have an
identical malfuntion?? Does anyone know about this or
have a operator's manual where they can look up the meaning
of this error message??

Thanks and Best Regards

State analyzers require an explicit clock to latch the data - this is
usually one or a logical combination of some dedicated signals on one
or more pods. That is precisely the message you get if these arenot
connected to anything.

I believe you need to supply a clock pulse to the Pod
with a CK (clock) input. Set the treshold to TTL and
apply some kind of TTL pulse (1 KHZ) to the clock probe.
Regards, Kevin..

greetings all,

I'm finally heading down to take my Tech exam after years of putting it off and would like to know what a good deal would be for a used 2-meter handheld, preferably with DTMF. I don't mind older stuff that might not be quite as small as what's out there today, and unless the Austin ARC's repeater requires CTCSS I don't need it. If it can do 70-cm that's even better but I'm mainly after 2m.

If you're in Central Texas and have an old clunker, and want to upgrade to something more fancy, let me know so I can get in touch with you and talk price, shipping, etc. ;-)

Your local RadShack can order one to be shipped direct to your home
via RSUnlimited service. Unless you've got a particularly bright /and/
experienced clerk at your local rad-shack (why is s/he still there?)
you can get the part # quicker yourself lookin the the RSU catalogs hung
like phonebooks on the wall unit than they'll
be able to find it, and save yourself hassles.

All of the user manual and Some but not all of the service info is
online at http://support.tandy.com/ (clue: Ham radio is under 2-way
under Communications). I think it SHOULD give the RSU # for the service
manual here, but they don't.

Note, full user manuals on the 212, 242, and 404 are there too (but not
the ill-fated 204).

Has anyone experienced poor radiating characteristics with the JEDI series VHF radios? These radios have good sensitivity and power out when tested with the proper cables on the bench, but exhibit less than expected performance in real service. When a Motorola HT-600 or a GE MPD is placed side-by-side with a MT-2000, the older units seem superior. A field strength meter test (rather unscientific admittedly) shows much greater readings with the older radios also. Any suggestions?

12 channel. 1 channel element included. I'm told these PAs are great.
w/ accessories: control head, cable harness - but no mic or spkr.
Price: $50 ea

Qty: 1
Motorola MT-500 Rapid Gang Charger. 12 slots.
Some rust but works fine.
Price: Make Offer

Qty: approx 40
Motorola MT-500 Channel Elements. All in the 155-158 Mhz
range on various freqs. Buy'm and I'll throw in beat up used leather cases,
these are the original cases for the mt500 from Mot.
Price: Make Offer

Qty: approx 20
Motorola Tone-Voice Pagers. UHF.
Model A04JVC2468A. Includes tone (various) but no batt
or batt cover. On 450 MHz now, but tune up fine on 440 MHz.
Price: $5ea

Qty: approx 20
Drop in chargers for above Pagers.
1.3VDC at 18mA
Price: $5ea

GE LMR ----------

Qty: 6
GE Portable. VHF. Working.
8 channel. 3 to 5 channels crystaled various 153-158 MHz.
Used high pwr nicad included, Antenna included. No spkr/mic.
Price: $10ea

Qty: 12
GE Portable. UHF. Working.
8 channel. 5 to 8 channels crystaled either police 460.xxx or
medical 463.xxx rpter splits.
Used high pwr nicad included, Antenna included. No spkr/mic.
Price: $15ea

Qty: approx 20
GE mobile "convertacom" for above portables.
No power amplifier, but INCLUDES mobile mic & mobile spkr.
Price: $15ea

Qty: 2
GE Rapid Gang Charger for above portables. One is 30 slots and
the other 10 slots.
Price: Make Offer

Qty: 1
GE 4ch mobile, unknown model and condition. Solid state.
Integrated unit, not a trunk mount. Model RG-56FFS66. w/mic.
Price: Make Offer

HAM ----------

Yaesu FT411 2m portable.
dead nicad batt pack, but includes intact alkaline AA batt pack.
w/ accessories: trickle charger, 2 sprk/mics: standard spkr/
mic plus "spy"style mic-in-earbud, soft case, manual, orig box.
Well-used but works great.

Price: $150

Yaesu 5200 mobile. vhf/uhf dual band.
MISSING the control head & Mic from auto break-in,
but all else included (bracket, manual, orig box). Worked great.
Price: $200 OBO

Bearcat BC 950XLT Scanner.
Mobile. 800MHz, cellular and aircraft. 100 ch.
w/ ac adapter and mobile mounting bracket. Maybe the orig box.
V.good condition, works great.
Price: $100

6244. Help: My HTX-202 is acting strange

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-17 00:00:00 UTC
From: Darwin Thom <darwin@nortel.com>
Message-ID: <33A7051F.1F59@nortel.com>
Source record: 172715

Can anyone tell me why my HTX-202 is having problems transmitting.
I was testing my SWR when I noticed that by placing my hand around the coax (RG174) I could increase the SWR to about 3.5. Needless to say I did stay there very long. I replaced the coax and the SWR is now about 1.5.

Ever since this time, the HTX-202 seems to be very SWR sensitive. If I use the radio on an antenna with an SWR of less than 1.5, the transmitter puts out the full 5W Tx power. If the SWR is just over 1.5, the output power is greatly reduced to less than 1 watt.

I realize that the HTX-202 has built in protection to reduce the Tx power in the event of high SWR, but it was never so sensitive before.

Any help would be appreciated.

73,
VE3DXR

>What else can I do - 34 dB attenuation is quite a lot.

Years ago with AB1 amps and 100W exciters we used swamping networks.
Use a chassis box putting Coax connectors on each side and a large
group of resistors to cut the power. We went from 100W to less than 1
watt (reduction of 100). Description was in the W6SAI ands RSGB
handbooks.

I'm a ham operator, and I use relatively high power levels (>1500 watts) on many different frequencies. My television set is not being interfered with, only when my wife wants to watch a video tape does my hobby begin to cause problems. No neighbors complain, so the problem is extremely local. The VCR is a Fisher, and I've been to thier website looking for an e-mail address to write to a technician, but there are none published. I know that many electronic manufacturers try to get by with the least amount of parts, but have available modification kits just for my problem. Any idea how to get 'hold of a Fisher factory tech on the internet? Anybody ever have this problem and fix it? Thanks -Web

> kr4wm@sccoast.net

I had that problem on 40 meters only. I found that with the antenna
disconnected from the VCR the problem went away. As soon as I connected
the shield of the antenna to the VCR, the problem came back. I ended up
coiling about 20 turns of the VCR antenna cable (RG59) to make a choke
about 10 inches in diameter. This fixed the problem.

I suggest you first determine how the RF is getting into the VCR
(antenna, power leads, or direct through the VCR case). Stop the RF from
entering the VCR with chokes and/or shielding.

I have heard that reasoning before and I just do not buy it. Take the Kenwood 331. It uses the same case, mic, etc as their 2M rig. What research and development costs could there be? They have the same features except the 222 rig has only 25 watts.

They charge $200 more for the 222 rig compared to the 2M rig. They look identical except for the model number on the outside. Why $480 versus $280?????

If the manufactures had them for a decent price, they could probably sell a lot of them. Here in Southern California, there are 118 open repeaters on 222 versus 41 on 440. IN my neighborhood I can reach four open 440 repeaters and 18 open 222 repeaters. Almost all of the 222 repeaters are open (about 86%) versus about 9% open on 440.

It seems to me that 222 is more of a true Ham band instead of a private phone patch system that 440 has become.

Steve

>Why do you want to use fm down in that portion of the band? 144.000 to
>144.100 is cw only 144.100 to 144.300 is ssb.

By default the HTX-212 won't transmit in 144.5-144.6MHz either. This
band includes the inputs for repeaters whose outputs are on
145.11/13/15/17/19MHz. IMHO if RS had set the bottom end to 144.5
instead of 144.6, it would have worked a lot better...

Every APC UPS is able to run until its batteries are depleted at the
nameplate rating.
The XL versions have a different thermal design and can run the nameplate
rating
continuously at highest specified ambient.

>The rating I'm
> talking about above is the one the UPS can sustain for 10 minutes or
more.

OK, I could name a few brands that can't sustain full rated load for more
than a
few minutes, but with reputable manufacturers you can pretty much believe
the
nameplate ratings, BUT NOT BEYOND (like running with an infinite DC supply
at full rated load).

In the early 1950's my parents bought a TV set that had an unused RCA connector on the back marked "Color". I didn't write to the manufacturer complaining that they'd clearly had trouble with that portion of the TV and left it off. Nor did I then send letters to all my friends also complaining bitterly about how unfair RCA is to its customers.

Let's face it. Today's typical ham wants a compleat [sic] station in a 4 cu in. box, containing the equivalent of a $25,000 Rhode & Schwartz receiver (cell phone ready), a 1 KW all mode transmitter covering VLF through light, a noise reduction algorithm that can reach 100 dB below the noise in real time to pull out weak signal DX, something on the order of a Cray to run the whole thing (and clone, too -- including sheep!). It should all run on 12 volts at no more that 1 ma. current drain, perhaps even pulling its total power from the approximate 100V/m electric field of the earth. Modular, of course, with connectors that are guaranteed to remain oxide free until just before our small star expands enough to consume the planet. And woe unto the manufacturer who leaves ANYTHING out, especially features key to the US market even though that market is one of hamdom's smaller markets -- simply because that's us, and the world should be America-centric anyway.

Nearly forgot -- can't cost more than $1299 list. And I should NEVER EVER have to purchase a complete new radio, just little tiny upgrade modules. For $5.99 each, the vendor should also offer "green" wires that can be cut -- not for any reason, just because that seems to be the major "homebrew" activity in ham radio today, and if we're not homebrewers then what are we?

:-)

I played with one over the weekend,I do a lot of train watching,and if
you have an interest in any out of hamband Vhf listening,you will be
happy with it.It seemed easy to use,I have a Icom dual bander,so I don't
remember what easy to use means anymore.Without the manual,I was able to
get it to do a lot of stuff very easily.Audio was good,not extremely
loud,but you can always use a cassette adapter in the car if you need
to.Seemed to be well made.I bought a Standard dual bander(C510)on
Saturday,very tiny,not loud decent recieve to 900+MHz.Can't find a case
for it,they tell me it isn't out yet..Barry N8PVX

Actually it was an FM tranceiver, fully synthesized, 25
watts out if I remember correctly.

The company lasted about a year and then folded.

At that time, I was working at a company called
"Spectronics", in Oak Park (Chicago) IL, which was, at that
time, one of the leaders in two meter FM sales for amateur
radio use ... nostalgia time, gang - how many of you built
HT220's from "Spec boards"?

Anybody know how to make the HTX-212 store non-ham freqs
in the memories?

If it's not possible, I think that really sucks. What's the
point of having expanded receive coverage if you can't save
your favorite channels?

First off,I don't see your callsign anywhere. And obviously you surf the net while at work for the health department because a cheap skinflint like yourself would'nt have a computer at home. Now,since your so worried about money concerns get off the computer at work and do your damn job. Geek.

From: gwalsh@kilroy.jpl.nasa.gov (Gerald J. Walsh)
Newsgroups: rec.ham-radio
Subject: Here are the Kenwood TH-77A mods!

Here is the complete list of mods that are know to date for the
Kenwood TH-77A Dual Band hand held:

>From the factory, it can receive 138-174MHz and seems to do it quite
More? y
well with the supplied rubber duck antenna can receive
438-450MHz and, likewise, does this quite well too! One very interesting
feature of the TH77A is that it can do *DUAL* UHF receive! To do this
it uses the VHF receive section and you have less sensitivity, but I
really haven't noticed much signal degredation at all.

NOW! On to the *EXTRA* capabilities (there are other BASIC functions
that I didn't mention, those were just the highlights).

After making a few modifications to this radio, you can get it to
do the regular stuff that the IC24AT will do, such as AM aircraft,
expanded UHF (400-512 depending on PLL lock) and 800-950 (again,
depending on PLL lock) in addition to cross band repeat.

HOW DO YOU DO THIS!?

Easy (if you've got a steady had for removing a chip resistor!).

Open it up. There are 3 screws visible on the outside and 4 more
More? y
underneath the battery pack. Unlike most radios, this one doesn't

have a spring for the battery release switch. It gets spring
action from the metal plate that you will remove when you take
out the four screws.

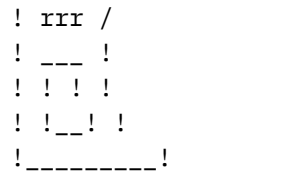
Anyway, the area you will be working in is on the control board
which is fixed to the front section of the radio. In particular,
look for the yellow electrolytic capacitor (its yellow in mine) that
is at the dead center of the board (there are two IC's, one above
this and 1 below this). You will have to remove the electrolytic
capacitor (C124) and set it aside for a few minutes. You will be
putting it back afterward. The reason for removing this is so that
you can remove a chip resistor that is underneath it. To avoid tearing
the flex board foil traces, do not bend the leads of the capacitor.
There is a green wire that is connected to one side of this capacitor.
If you disconnect one side of this green wire, you will get RX from
400-512 (PLL lock depends on the radio, but you can DIAL from 400 to
512). Orient the radio so that the volume controls and BNC are at
12 O'Clock on your table (farthest from you) and the bottom (where the
battery connects) is at 6 o'clock area where you
More? y
removed the capacitor, you will see a blank space where there could have
been a chip resistor followed by two chip resistors side-by-side and in
the next row below that, you will see 3 more that are side-by-side.
There is one to the left of these two rows that is kind of off center.
Now, there are three ways to configure this radio at this point:

1 - With one side of the green wire pulled, you will have
136-174 RX, 400-512 RX. If that's all you want, you are done.
2 - By removing the rightmost chip resistor (R129), in
addition to keeping one side of the green wire disconnected,
you will have 136-174 RX, 400-512 RX, 118-136 AM RX, 800-950 RX.
3 - By removing both of the chip resistors, in addition
to putting the green wire BACK where it belongs, you
will have 136-174 RX/TX, 400-512 RX/TX, 118-136 AM RX
and 800-950 RX.

All three of these options include, of course, putting the electrolytic
capacitor back in place afterwards.

NOTE! ONCE YOU START DOING THIS STUFF, YOUR MEMORIES AND POWER ON SWITCH
More? y
CONFIGURATIONS WILL ALL BE LOST! MAKE A NOTE OF HOW YOU ARE SETUP BEFORE
YOU BEGIN!

```
I I I
---------
__ !
! ! ! !
! !__! !
! !
! =rr <------- remove the right one for AM/800-950 RX
! r ! remove both to also get extended TX
```



Layout shown with electrolytic capacitor C124 removed

The best way to do this is to heat up both sides of the resistor and
More? y
push it out of the way with something small. At least this was the
best way for me! Once it's out, put the capacitor back in place and
close it up. (Put the green wire back also, if you are making the
out of band TX mod too!)

TO OPERATE THE NEW FEATURES

To receive AM aircraft, get the VHF side in the main band and hit the
ENT key twice to go to the VFO. Once you are in the VFO, hit the
UxU key twice. Once for dual UHF receive and the 2nd time for AM
(118-136).

To receive 800-950, get the UHF side in the main band and hit the
ENT key twice to go to the VFO. Once you are in the VFO, hit the
UxU key once.

To enable crossband repeat, hold down the SUB BAND UP ARROW key while
turning on power. To disable, do the same thing again. Kenwood says
that both bands can contain shift information but only one band can include
an encode/decode tone.
More? y

One more thing. The POWER ON + 8 KEY that allows you to select the
kind of memory recall will be a bit different. Now, you will have an
extra option in the right side of the display. E1 or E2 which may
be selected with the VFO control on the top of the radio. E1 mode will allow
you to automatically make the radio switch to AM or switch to the 800MHz
stuff as you use the VFO knob to move through your memory channels. E2 mode
will skip over any memories that are AM or 800-950MHz. In E2, the only way
to recall one of the *special* memories is to go to the VFO, hit the UxU
key to go to AM or 800MHz and then recall one of these memories. Personally,
I have mine in E1 and don't know any reason why anyone would want to be in E2,
but its there if you need it!

The Kenwood modification sheet says the following about AM sensitivity:

While the receiver sensitivity is neither specified nor guaranteed
for the AM range, the sensitivity is typically less than 1uV for
10dB signal plus noise to noise ratio between 123-131MHz. The
band edges, however, measure between 8-20uV for 1dB S+N/N ratio.

More? y
SOME PERSONAL OBSERVATIONS

My radio seems to have a hole in it in the 800MHz band. I get this beeping sound when I try tuning between 864-875MHz (I believe the TH77A beeps when it can't lock). Also, the sensitivity could be better around 483MHz (local Sheriff). I did notice that using the dual UHF receive and tuning to 483MHz was better than using the straight UHF receive. (Remember, the dual UHF RX uses the VHF section with reduced sensitivity. Well, its reduced in the amateur portion, but seems to be enhanced out of the band!) At around 506MHz (Los Angeles PD) its VERY weak. I could barely hear anything WITH an outside antenna. Maybe some tweaking inside could improve this (I haven't really looked for the VCO yet).

By the way, Pontus did mention that checking the input frequency was a bit annoying. You have to hit FUNCTION SHIFT to get the radio to REVERSE and listen to the input. I agree!

Anyway, hope this information helps you get more from you new toy!
Its a *REALLY* nice radio!!

Lines: 28

Here is the mod for the DJ-560. I haven't had my friend try it yet,
but thanks anyway to Kevin Jessup for supplying the information!!

There is NO mod required to do crossband repeat. It is a standard
feature. If crossband repeat operates on the 800 MHz band (after
the modification), that is another matter!

Performing the aircraft mod (as described in the back of the owners
manual, also gets you 800 Mhz).
```

BTW, cutting the RED jumper provides AIRCRAFT and 800 MHz.
Cutting the BLUE wire provides out of band transmit (but NO
guarantess that performance will be within amateur band specs).

To enable 800 MHz, press the UHF key 3 times (to guarantee that your
are in UHF VFO mode). Then press the function key (keep it held
down) and then press UHF.

Have fun!

>antenna is good for this model. THANKS!

This weekend I bought a Diamond RH10, works noticable better than the
original antenne, although not much. It also has wideband receive and
can be used to transmit on 23cm, although the TH79 can't do that.

BTW, did you know that the TH79 can receive from 130-174, 400-470 and
800-999 MHz? For that reason, this wideband receive funtionality is
very nice.

Regards, Rob B.

6281. Best radio for backcountry to base?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-17 00:00:00 UTC
From: alaska98@hotmail.com
Message-ID: <33a7582d.66889185@news.flash.net>
Source record: 172825

I am planning an expedition to Alaska with a group of twelve people and six trucks. I am going to invite some lucky Ham radio operator to become a member of the team, but before I do that, I really need to know what kind of rig I need that person to run.

So, here are my requirements, and hopefully many of you will give me your thoughts on what is needed...

Our first requirement for the radio is emergency communications for evacuation or medical help. We will be up to 200 miles away from the nearest large town like Fairbanks or Anchorage.

The second requirement is that we will need the capability of sending web page updates, on a daily basis, to a server that will be in either Fairbanks or Anchorage... again, about 200 miles away. I assume this means we will need packet radio.

We can easily setup a communications tent at our campsites, along with a generator for power. We are travelling with SUV trucks, so we can take a fairly substantial breakdown antenna. It would need to be moved about once every 4 days on average.

We will have laptops on the expedition, and this is where we will create the daily web page updates. The updated files need to get from the laptop to the internet server in Anchorage or Fairbanks. At this time, these servers are dialup access type accounts. So I need to make the bridge from laptop to packet to phone line at some point. Maybe this means I need to become friends with a Ham operator in one of these towns and that also has a computer, modem, and phone line?

My questions are:
What is the best frequency range for this scenario? 10 meters?
How about breakdown antennas?
How big will the generator need to be?
What other equipment will I need? Wiring? Packet Modems? Microphone?
What if I want to increase my range substantially, and communicate from Alaska directly to Texas? Is there a big difference in equipment?
What are some ballpark costs for this equipment?

Finally, as licensed Hams, do you think it is appropriate that I get a Ham operator to join my team. I want this person to be more than a Ham. I need someone who can keep all the CB's in the six trucks working, get daily weather reports and weather faxes, communicate with ranger stations, tune antennas, PLUS do all the stuff I described above.

I have checked into the use of cell phones, and there is no service in the area I am travelling. Maybe satellite phone is the way to go, but I have heard that this costs about $8,000 for the box.

Thanks
John

> Will they sell the prototype DSP for $500, still
>be willing to get it if it works!!

ICOM does not sell prototypes. I do not think there is a DSP unit for the 706 MK II at all. As for the display saying DSP who knows what ICOM, Inc is thinking there. We can all speculate about that. Say did you know the 735 has RTTY in its display but no FSK mode was ever implemented or the 751A and 761 has an extra digit for 10 Hz readout which was never enabled. Factories can place most anything into a display with out meaning.

Hi Rob,

Not to forget 118-174 and 300-399 Mhz. There's even a mod to receive
starting from 68 Mhz.

About the antenna, I use a Commet 1/2wave (about 40cm) which allows me to
open a repeater from about 55 km which is really great.

Paul

6286. Kenwood TS-850 Keying Information

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-18 00:00:00 UTC
From: eparish@nospam.com
Message-ID: <eparishEBzIF3.4rC@netcom.com>
Source record: 172581

I am looking for information about the Kenwood TS-850. I don't have a manual or a TS-850, which makes it hard for me to figure out the answer, which may be simple. Is there an input on one of the accessory connectors that would inhibit transmit? The situation is that I am running VOX with a two transmitter station (not mine) and would like to lock out one of the transmitters with a simple signal to the radio. Does the TS-850 have such a signal or means of inhibiting the transmitter?

Thanks for any information

6287. For Sale: Yaesu FT 890 AT + accessories for home and mobile use.

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-18 00:00:00 UTC
From: Michael Conner <mconner2@utk.edu>
Message-ID: <33A831DF.66FF@utk.edu>
Source record: 172582
Cross-posted to: rec.radio.amateur.misc,rec.radio.swap,rec.radio.amateur.equipment

FOR SALE:

Yaesu FT-890AT in very good condition.
Has built-in antenna tuner (useful for mobile), 100 watts transmit,
built-in keyer, general coverage receiver and all-mode transmit. I
always found this 890 to have a great receiver.

Also for sale:

Yausu YS-60 SWR + Power meter (matching color to 890)
Astron RS-50M (with meters) (barely used)
Bencher Keyer BY-1 (barely used)
Hustler Mobile resonators for:
80, 75, 40, 30, 20, 17, 15 and 10 meters (low power models)
and two masts - one stainless steel and other is fiberglass.
(all in good condition)

and I'll throw in a 40' length of 9913 coax.

Prices dependent on who pays shipping, but figuring:

FT-890 $750
YS-60 $70
RS-50M $175
BY-1 $ 50
Hustler $140 for all.

Would prefer to sell entire package. Am selling because work hours are
too long and I don't travel much any more and the cash would be useful.

Please e-mail me for further details, or call in afternoons at work:
(423) 974-0123.

> kr4wm@sccoast.net

I have the same problem with a $500 Sony 4 Head Stereo VCR.

I run a Drake C-Line barefoot into a Vertical, not a high powered
station. When it happened to the VCR, it was actually playing a tape
(IE, not the tuner). This surprised me greatly and I'm not sure that
there is a magic fix for you.

A couple of thoughts though, remove the Antenna connection to the VCR an
check. RF could be be getting in through here and coupling in a odd
places. Put ferrite beads on all the connections going into and out of
the VCR. If neither of these things help then it could be coupling
directly into the VCR head.

Good Luck!
Jim N8CAH

6293. WANTED: Tempo One SSB HF Tranciever Power Supply

We're attempting to sell off an extensive stockpile of NOS and used vacuum tubes which has been accumulating since the mid-1930's.

The collection was amassed by a radio enthusiast who, having received certification as a radio techician in his teens, served as a radar tech during WWII, worked for Westinghouse post-war, owned a radio shop during the 50's and 60's, and currently restores vintage radios.

This inventory, of over 800 tube types, includes many rare pieces, all at VERY fair prices. To request a partial stock list, which includes Sweep Tubes and others used in Transmitters, Linear Amps, Audio Equipment, etc. please email:

locoprom@adan.kingston.net

Please DO NOT quote this article in your reply.

Thanks for your interest!

---

bit bucket /n./

1. The universal data sink (originally, the mythical receptacle used to catch bits when they fall off the end of a register during a shift instruction). Discarded, lost, or destroyed data is said to have `gone to the bit bucket'. On Unix, often used for /dev/null. Sometimes amplified as `the Great Bit Bucket in the Sky'.

2. The place where all lost mail and news messages eventually go. The selection is performed according to Finagle's Law; important mail is much more likely to end up in the bit bucket than junk mail, which has an almost 100% probability of getting delivered. Routing to the bit bucket is automatically performed by mail-transfer agents, news systems, and the lower layers of the network.

3. The ideal location for all unwanted mail responses: "Flames about this article to the bit bucket." Such a request is guaranteed to overflow one's mailbox with flames.

4. Excuse for all mail that has not been sent. "I mailed you those figures last week; they must have landed in the bitbucket." Compare black hole.

This term is used purely in jest. It is based on the fanciful notion that bits are objects that are not destroyed but only misplaced. This appears to have been a mutation of an earlier term `bit box', about which the same legend was current; old-time hackers also report that trainees used to be told that when the CPU stored bits into memory it was actually pulling them `out of the bit box'. See also chad box.

Another variant of this legend has it that, as a consequence of the `parity preservation law', the number of 1 bits that go to the bit bucket must equal the number of 0 bits. Any imbalance results in bits filling up the bit bucket. A qualified computer technician can empty a full bit bucket as part of scheduled maintenance.

I've a few suggestions, I used to service video equipment.

1) Try first the steps mentioned in the ARRL handbook in the interference chapter. Apply rf chokes to the power cords of both the TV and VCR and a trap (high-pass filter) to the RF cable to the TV set.

2) Check the resistor/capacitor network which grounds the chassis of the VCR for RF. Alternatively, you may want to remove these and strap the VCR chassis to a good RF ground. Also, make sure there are no missing screws from the VCR cabinet, some of these provide a ground contact.

3) If the problem is in playback only, the trouble may be that RF is getting into the rotary head preamp. This is particularly acute as its bandpass overlaps 80 M and comes close to 160 M. If your machine is an older, more expensive model (such as the FVH-575) there is a shield over the drum assy but if yours is one of those newer, lightweight models shielding of the drum is helpful. Check under the drum too. If there is a flexible PWB (a "ribbon cable") for connecting the rotary transformer to the preamp IC you may wish to install a shielded cable. Also, you may wish to install bypass caps on all DC leads going to the preamplifier, especially Vcc and Rec/PB switching lines. Shielding the little preamp PWB worked for me once.

4) If your machine is one of the new lightweight all-plastic sets a radical cure may be indicated. You may try removing the top cabinet, front panel, tape transport, and PWB's and line the pastic base you have left with aluminum foil, providing for a ground connection. Reassemble and your modern VCR will be RF tight.

>
>Our first requirement for the radio is emergency communications for
>evacuation or medical help. We will be up to 200 miles away from the
>nearest large town like Fairbanks or Anchorage.

Ok, that's a valid use for amateur radio. An HF rig is the ticket here.
Operating on lower HF will give you groundwave coverage, or near
vertical incidence skywave coverage, for that distance.

>The second requirement is that we will need the capability of sending
>web page updates, on a daily basis, to a server that will be in either
>Fairbanks or Anchorage... again, about 200 miles away. I assume this
>means we will need packet radio.

Is this in any way a commercial venture? We can't use amateur radio for
commercial purposes. If this is just hobbyist activity, then PACTOR or
Clover will work on HF. Throughput is strictly limited, however, so the
uploads need to be kept small.

>We can easily setup a communications tent at our campsites, along with
>a generator for power. We are travelling with SUV trucks, so we can
>take a fairly substantial breakdown antenna. It would need to be moved
>about once every 4 days on average.
>
>We will have laptops on the expedition, and this is where we will

>make the bridge from laptop to packet to phone line at some point.
>Maybe this means I need to become friends with a Ham operator in one
>of these towns and that also has a computer, modem, and phone line?

Yes, that will be absolutely essential.

>My questions are:
>What is the best frequency range for this scenario? 10 meters?

No. The lower end of HF is what you need. 160m, 80m, 40m, or perhaps
30m will be the preferred bands. Groundwave coverage is greatest at
the lowest frequencies, and NVIS works only up to the critical frequency
of the ionosphere. Given current solar conditions, that's going to be fairly
low too, though 30m might just squeak in under the wire.

>How about breakdown antennas?

Wire dipoles will suffice, strung between trees. You won't need much
height because you'll be depending on groundwave and NVIS propagation.

>How big will the generator need to be?

A 5 kW generator should comfortably handle the station, even if an
amplifier is used. You can probably get away with less.

>What other equipment will I need? Wiring? Packet Modems? Microphone?

Yeah, all of the above, plus a good antenna tuner. An electrical toolkit and
some spare parts are a very good idea as well.

>What if I want to increase my range substantially, and communicate
>from Alaska directly to Texas? Is there a big difference in
>equipment?

That's actually easier. You'll want to operate as close to the MUF as you
can, and that lets you run less power. Any HF radio you choose will be able
to cover the frequencies you'll want to use. You need different wire antennas,
but that's trivial since what you'll need will be shorter. You'll want to get them
higher in the air, though, so a set of tree climbing gear, or a bow and arrow,
are a good idea.

>What are some ballpark costs for this equipment?

About $5,000 will do it up in style. You can probably do it for much less.

>Finally, as licensed Hams, do you think it is appropriate that I get a
>Ham operator to join my team. I want this person to be more than a
>Ham. I need someone who can keep all the CB's in the six trucks
>working, get daily weather reports and weather faxes, communicate with
>ranger stations, tune antennas, PLUS do all the stuff I described
>above.

Well remember that amateurs aren't allowed to be paid for amateur radio
activities. Amateur radio must not carry traffic in support of the routine operations
of any non-amateur organization, only traffic which serves to support the health
and welfare of the public or participants. In other words, amateur radio can not
be used for routine logistic support of what could be considered the ordinary
functions of the organization.

And amateurs cannot handle messages for non-amateurs which could reasonably
be expected to be handled by other telecommunications services. It's Ok to have
amateur radio along as an emergency backup, and it can be used for hobby type
messages. If your venture is anything but a lark by off-road enthusiasts, you probably
need to make arrangements to use non-amateur communications for your routine

operational communications.

>I have checked into the use of cell phones, and there is no service in
>the area I am travelling. Maybe satellite phone is the way to go, but
>I have heard that this costs about $8,000 for the box.

Prices have recently dropped sharply for these terminals. You can probably find one for about $3,500. You can also rent or lease them. The per minute charge is a bit steep, though, about $2 a minute. This may be your best option for routine operational communications.

Don't miss this year's Atlanta HamFestival & Computer Expo!

FUN! FUN! FUN!

The Atlanta HamFestival, now in its 69th consecutive year, is sponsored by the Atlanta Radio Club (ARC) in cooperation with numerous radio amateur clubs and related organizations.

Dates: June 21 & 22, 1997. Designated as the ARRL State Convention. Air condition fleamarket and commercial exhibit areas.

Location: City Hall East Exhibition Center, 640 North Ave., Atlanta, GA.

Hours: 9 - 4 on Saturday, 9 - 3 on Sunday

Forums on Saturday only! : 9:30AM QRP - A forum presented by the enthusiastic
North Georgia QRP Group on building and operating rigs with under 5 watts
output power. Group members will share their experiences of building lightweight full transceivers in kit form.

10:30AM APRS - Ralph Fowler, N4NEQ - (Automatic Position Reporting System) This is a graphical software program that sends, receives, and displays
realtime position information. Learn how APRS was used for vehicle tracking
for the March of Dimes Walk America, Ham Radio and TV equipped weather balloons, camera equipped helicopters and motorcycles during the Summer Olympics.

11:30AM CONTESTING - Neal Sulmeyer, AE6E "The Joys of Contesting" A compendium
of contesting experiences that will motivate any amateur.

12:30PM BASIC ANTENNAS - Tom Rauch, W8JI, Consulting Engineer for Commercial and Amateur Radio Manufacturers - Learn why some antennas work. Learn why some antennas don't work. Let Tom answer your antenna questions.

1:30PM Frank Butler, W4RH, ARRL Southeastern Division Director
Bill Moore, NC1L, DXCC/VUCC An informative League and DXCC Question and Answer Forum.

2:30PM HEARD ISLAND - Wes Lamboley, W3WL
The BIGGEST & BESTEST DXPedition ever! 20 guys spent 17 days in

this uninhabited antarctic paradise for Ham Radio. A dirty job but somebody had to do it.
New world records were set. 1983 was the last time Hams were on Heard Island.

For more information, see http://www.saf.com/arc
Talk-In: Primary 146.82(-), secondary 145.35(-); Continuous information on 147.555 Mhz.

<big snip>

some "UPS" are realy fast switching. The run off the power mains untill
they drop and then they switch to the inverter section. I have an older
APC 1200 VA "UPS" that does this. So the statment that you may overheat
somthing is valid.

Source record: 172609

Matches IC-735, but works with most any ICOM hf rig (with proper cable)

Multi-coax outputs; 1 random wire out
Pre-sets for each band make auto-tuning very quick and precise

Requires no external power; small and lightweight

Has never been fed with more than 150 watts

Absolutely showroom condition, inside and out...
Packed in original carton, complete with instructions

$300, including shipping at my cost ($529 in latest HRO catalogue)

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-18 00:00:00 UTC
From: Dennis Jacobson <n6ng@sj.bigger.net>
Message-ID: <33A80A4C.7A36@sj.bigger.net>
Source record: 172613

What 12 volt radio did Kenwood make following the TS-450S?
Did they stop making the 12 volt versions. Been very happy with the
Kenwood line but I have a feeling they stopped making mobile HF radios.
The next one I know about is the TS-50 (great numbering scheme) and it
is not a cw tranciever.

Any ideas?

p.s. I sent them mail and asked Kenwood direct.. with no response.
Maybe that is my answer...

I'm going to be doing a village electrification project in the Dominican Republic this summer. The project won't have a vehicle, and the only way to communicate out for help or materials is by a local 220 Mhz repeater.

I'm looking for a 220 Mhz HT or mobile transceiver. This could be a tax-deductible donation, a reasonable sale, a trade for some 2-meter gear I have, or even a loan for the summer.

Thanks for your assistance,

Jon Katz N6XLN

Absolutely as new DX440 solid state portable. BFO, digital, memories, clock/timer, in box w/all documents, never outside the house, non smoker, with New ac adapter
$100

Pro 62, good condition, 200 ch, 800 mhz. (no cell), with AC adapter/charger, no box, little used but shows very minor handling.
$100

Will swap one or both for 2M stuff, or towards 10M mobile (no HTX100s please), or "export" CB, email replies please

My biggest complaint about AL generic yaesu ft-50 batteries is that if you apply pressure to the top of the beltclip downward, the clip will fly off. The yaesu ones do not do this. Other than that, I've used my MaHa for a while now and it's great..

Kenwood TS-50, New price @ AES=$849 -- Asking $600
Kenwood AT-50 Antenna tuner, New Price @ AES=$329 -- Asking $245
Kenwood YK107C CW Filter, New price=$129 -- Asking $90

All in excellent condition, no scratches or marks. Original boxes and manuals. Purchased new 3/94. The AT-50 was used only about 30 minutes, I ended up using an SGC tuner instead, because of the type of antenna. It has
served me well, but I don't need a small radio now.

I'll pay COD shipping.

> connector on the bottom of the PCB that is an audio out 15 pin
> connector.

In the early 1950's my parents bought a TV set that had an unused RCA connector on the back marked "Color". I didn't write to the manufacturer complaining that they'd clearly had trouble with that portion of the TV and left it off. Nor did I then send letters to all my friends also complaining bitterly about how unfair RCA is to its customers.

Let's face it. Today's typical ham wants a compleat [sic] station in a 4 cu in. box, containing the equivalent of a $25,000 Rhode & Schwartz receiver (cell phone ready), a 1 KW all mode transmitter covering VLF through light, a noise reduction algorithm that can reach 100 dB below the noise in real time to pull out weak signal DX, something on the order of a Cray to run the whole thing (and clone, too -- including sheep!). It should all run on 12 volts at no more that 1 ma. current drain, perhaps even pulling its total power from the approximate 100V/m electric field of the earth. Modular, of course, with connectors that are guaranteed to remain oxide free until just before our small star expands enough to consume the planet. And woe unto the manufacturer who leaves ANYTHING out, especially features key to the US market even though that market is one of hamdom's smaller markets -- simply because that's us, and the world should be America-centric anyway.

Nearly forgot -- can't cost more than $1299 list. And I should NEVER EVER have to purchase a complete new radio, just little tiny upgrade modules. For $5.99 each, the vendor should also offer "green" wires that can be cut -- not for any reason, just because that seems to be the major "homebrew" activity in ham radio today, and if we're not homebrewers then what are we?

:-)

>50 percent of the time. Is this normal? In the mobile, I'd probably never

I experienced the same, so I placed a 8 x 8 cm fan right behind the
heatsink, sucking air out of the 706. This fan runs at 5 volts so I
hardly hear it (it's a 12V-type).

Now, the built-in fan only runs while transmitting or after a long
transmitting time.

>I don't have too many hours on the rig yet, but I found it pretty easy to
>use and it does pretty much everything I expected.

Once you know the structure in the menu's, it's easy to control the
radio, although the dual-VFO could be improved.

Mr. Icom, how about a toggle switch Memory/VFO-A/VFO-B?

6340. News Rover -- Searches newsgroups for what you want - 218 0618023507 GSK

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-18 00:00:00 UTC
From: 218@RoverHome.com
Message-ID: <5o8310$vh2@news.triton.net>
Source record: 172655

Automate your collecting research!

News Rover is the ideal tool for searching through Usenet newsgroups for messages about items that you collect. Once you tell it what to look for, News Rover will scan a set of newsgroups and collect all messages that contain what you are searching for. For example, if you are interested in messages related to slide rules or calculators, you could specify a search expression such as:

slide rule or calculator

News Rover will then scan a set of newsgroups you select and collect any messages that match the search expression. This searching is completely automatic, so it works while you sleep, work, or play. The search expressions can be as simple as a single word, or they can be complex expressions with AND, OR, NEAR, and NOT operators.

You can download a free demonstration copy of News Rover from:

http://www.NewsRover.com

But News Rover is good for more than just searching collectables newsgroups. You can use it to search for family names in genealogy newsgroups, or for any other type of information in any newsgroups you choose. And News Rover is ideal for picture newsgroups. It decodes both UUencoded and MIME base64 images, and it combines and reconstructs binary files that are split into multiple messages.

Here are some of the key features of News Rover:

o Scans newsgroups you specify while you sleep, work, and play.

o Automatically downloads messages and attached files so that they are available for instant access when you are ready to review them.

o Decodes attached files of all types (UUencoded and MIME base64).

o Displays a picture gallery of collected thumbnail size images.

o Selects messages based on include and/or exclude criteria to help you find a needle in a haystack and eliminate spam. You can even use complex selection expressions with AND, OR, NEAR and NOT.

o Supports multiple "interest groups," each with sets of newsgroups, selection expressions, message database, and picture gallery.

o Remembers files already extracted and eliminates duplicates automatically.

o Saves parts of multi-part files, searches for the missing parts, and rebuilds the entire file when the last part arrives. It even combines parts found on different days and in different newsgroups.

o Allows you to post Usenet messages and send e-mail messages.

o Operates on a schedule you set up to use your phone line only when you don't need it.

o Automatically dials the provider and hangs up the phone when it is finished.

o Works with almost all Internet providers and news servers.

o News Rover is multi-threaded so you can read messages and view pictures while it downloads and decodes more messages.

News Rover was designed and written by real-life Usnet newsgroup junkies! With News Rover the news is ready when you are!

To learn more and download your free demonstration copy, visit:

http://www.NewsRover.com

News Rover is getting rave reviews...

D.G. says: I downloaded News Rover last night... I ordered this morning. I don't know how much time I saved. I give your product two thumbs up!!!

T.B. says: "Great Job!!! I tried your software for the first time today, and it beats Plukit-32 hands down!!

VCR sucks!
If your problems are when transmitting on 1.8 or 3.5 MHz, it is very
likely your RF goes straight into the video amp. This amp has 100 dB
of gain on these frequecies.

Solution could be to put the vcr in a well-screened box, or just dump
the vcr and tell the yf to start clean up the house instead.

I have a Weller DS-100 Solder/De-solder station for sale. The DS-100 is a production-style bench vacuum-suction unit that runs on compressed air. In addition to desoldering, it also has a Weller temperature-regulated iron built in. The unit is in very good condition and recently fully-reconditioned by Genesee Electronics. Perfect for a high-volume repair shop or small-scale production--but more solder station than I need for my prototype bench. New price is currently $1100 (check the catalogs). Selling for $285 shipped UPS. Contact Rick Littlefield (K1BQT) at 603 664-2515.

Hi!
My name is Andre, and I'm a radio amateur. My call is CT2GEU. I live in Lisbon, Portugal.
I need the help of all you guys. I have a transceiver (Yaesu FT-707), which has an external VFO (FV-707DM), with twelve memory channels. But these memories don't work, because one component went dead. The name of this component is:

MPD5101LC or UPD5101LC

I am really desperate on this, because the factory that produced these parts, burned a few years ago, on a big earthquake in Japan. Then, they didn't produced any more.
I would really apreciate your help on this. I'll pay really well for the component.

My E-mail is: ANDRE.ANTUNES@INDIVIDUAL.EUNET.PT

Thanks, everybody!!!

I have for sale an Icom 735 for $575.00 firm. I will cover the shipping to you.
It is in good working condition and has the box & manual. I purchased the radio in 1992, and I am the second owner, so I am not exactly sure on the age,but believe it is 8 to 9 years old. It is just the standard radio, no added extras like filters. I am willing to meet up with someone on the air if they would like to hear the radio.

For more info you can e-mail me at:

t95194@aol.com

Please send inquires to my e-mail address instead of posting them here, since I am not sure when I will return again.

>kr4wm@sccoast.net

Well, the first step is to quit using illegal power. The second step is to
get your antenna as far away from the VCR as possible. The third step
would be to improve the shielding of the VCR. VCRs use frequencies
in the range of 2.5 to 8 MHz to record video on tape (the recording is
FM). The heads will respond to the H field of any RF source in this
frequency range. The head preamps are very high gain, and intended
to amplify the weak signal recovered from the tape. You have to keep
the field strength from your transmissions low enough at the video heads
so that they don't override the signal off the tape. The demodulated FM
signal off the tape goes to video amplifiers with response from DC to 4 MHz,
so 75m signals can be directly amplified by these amps too. The only way
to prevent this is to make sure there is enough shielding to stop signal ingress.

Message-ID: <MPG.e13b6251e7426979896a4@news.infoave.net>
Source record: 172509

OK, here it is: I do not, nor have I ever, run greater than the legal limit of 1500 watts. My station is not capable of generating that much RF. It never has been, and probably never will be. I operate QRP CW, and voice in the 50-75 watt range, which is all I've been able to get out of my Ten Tec Corsair II. I have an amp which I have put maybe 15 minutes on in the two years I've had it- I just don't use it. Occasionally I will go on the air with an Oak Hills Research QRP Classic I built. It only does 2-7 watts depending on which band is used.

The reason I used the figure of >1500 watts was that I was trying to get assistance for a WORST CASE SCENARIO. I NEVER want to hear my wife complain about TVI again. EVER. PERIOD. I am aware of some manufacturers producing "RFI" kits, but I cannot get a lead on the Fisher company. I need to know if they produce such a kit for thier VCRs. In the event that they don't, I'd like to know what steps I can take to keep my puny 50-75 watt signal from tearing up the VCR. I would REALLY like to RF proof it for over 1Kw or more, so that I never have to worry about the problem EVER again. My way of thinking is that if a 1 watt resistor is good, then a 5 watt must be better. That was why I specified >1500 watts. I want to give it the BEST RFI protection possible.

To the persons who mentioned OO's:
A. I only wish they were more prevalent.
B. I wish the position was NOT ARRL affiliated, because in my locale and at headquarters in Newington, CT, the ARRL leadership is a bunch of spineless, theft-permitting idiots, who refuse to see justice done. I can back that statement up with paper if anyone wishes to provide postage. I will -not- discuss this particular topic further in the newsgroups.

To the newsgroup police:
What I wrote was incorrect, but it was my assumption that anyone who read my posting would have had enough sense to interpret my message as I had intended. I now see the error of my ways, and in the future, I will word my posts as if intended for 6 year olds so that you might better understand them.

After "Interigating" an Icom Employee I found the true story.
Icom wanted to put the DSP(white noise, Heterodynes ONLY) in the radio
but the engineers had alot of "BIRDIES" on two meters. They could have
disabled the DSP on two meters but the Hams whould have complained.
Finally the DSP project was scraped. This info came after 4 hours of
questioning the Employee. SHE/HE recovered from the "interigation".
Don't beleive Gary Fiber if he denies this. He is either uninformed or
not telling the truth.

Hello, everyone.

I need a copy of the owners' manual, schematic, etc. for my Design Electronics Ohio (DEO) model QSK-1500 PIN Diode T/R Switch. This switch was made approx. 10 to 15 years ago and is a high-power PIN diode switch, used with a conventional HF linear amplifier to give full-breakin operation.

I will cover any reasonable copying/mailing costs.

Thanks for reading this, 73

Look at the TS-570D for HF or TS-570S for HF/6M. These appear to be the
logical successor to the TS-450/TS-690 products.

Date: 1997-06-19 00:00:00 UTC
From: "William F. Erhardt" <erhardt@mt.net>
Message-ID: <01bc7c62$0af50400$5e427fce@default>
Source record: 172533

Hello from Helena, Montana - Is it possible to crossband the IC2350 dual bander for 440 input as control and then used the 2 meter side to access several repeaters. What I would like to do is put the IC2350 up at 8000 feet, link in with 440, and then access some of our distant repeaters here in Montana that I am unable to get clearly direct. Any help would be very helpful. Thanks in advance Bill (KA7YAO)

6407. HW2036 to HW2036A Mod??

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-19 00:00:00 UTC
From: martyt@sprintmail.com
Message-ID: <33a8a962.431684591@nntp.a001.sprintmail.com>
Source record: 172534

I have a friend with a Heathkit HW2036 2M rig who is interested in the modification that will essentially turn that rig into the HW2036A. Apparently the HW2036 only covers 2 MHz of the 2 meter spectrum and the desired modification will allow it to cover the entire band from 144 - 148 MHz.

If any one has this information or knows where I might find it on the net, please reply via e-mail. Thanks!

Likely the problem is sales of 220 MHz equipment. Lots of places in
the U.S. hardly know the 220 Mhz amateur band exists let alone utilize
it. Generally manufacturing of 220 Mhz equipment is not real
profitable sales are real slow many times down to 4 to 5 radios a
month various prices for equipment seems to have no effect on this
band.. With slow sales, even low prices do not speed up an under
utilized band. The U.S. has " hot beds " of 220 Mhz activity, so
sales are not as driven as a 2 meter radio.
Many places do not have any activity on 220 Mhz.

Another slow mover is the 440 HT, many will purchase a 2 meter HT but
not a 440 HT. When the operator considers a 440 radio generally they
go for the " dual band radio " and forget about the 440 HT. Sales for
strictly 440 Mhz gear are not there.

Gary

Hi, Andre,

If this IC is a 22-lead DIP, NMOS, 1K Static RAM (SRAM),
450ns, NTE offers NTE65101 which may be the IC you are looking for.
Their web address is: http://www.nteinc.com.

I hope this helps.

L8R,

Clyde

The 730 is controlled by several crystals and MARS out of band
operation was not possible without changing one or more crystal.

Thanks to the many people who responded to this post, both here and via email.

It appears that satellite phone will be the communication method of choice for this project. It is slightly higher in overall cost, but far exceeds the capabilities of amateur radio for transmitting data.

Thanks again.

Sales Bulletin
TM-V7a, Improved Front Panel
June 16, 1997
S-97-44-A

Improved Lens
For TM-V7A

There have been some TM-V7A owners that have sometimes noticed decreased visibility when the display is in direct cunlight. To improve daylight visibility of the front panel display of the TM-V7A, Kenwood has developed a new front panel assembly. As mobile radio installations differ the actual improvement may vary.

Owners of the TM-V7A that want to have the front panel assembly upgraded should follow these steps. This upgrade is free for te customer within one year of their purchase.

1. Customers may ship the front panel only (radio not required) to either of the following Kenwood Service Centers.
Kenwood Service Center East
829 Lynnhaven Parkway Suite 130
Virginia Beach VA 23452

Kenwood Service Center West
13030 Alondra Blvd Suite 104
Cerritos CA 90703-2257.

2. Customer must include a note requesting the panel upgrade and the serial number of his radio.

3. This upgrade is free for the customer within one year of their purchase.

6426. EARN MONEY EASILY !!! (For Smart Guy/Gal)

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-19 00:00:00 UTC
From: james@nowhere.com
Message-ID: <james-1906971701470001@ip-52-41.dialup.hkstar.com>
Source record: 172553
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.boatanchors,rec.radio.amateur.digital.misc,rec.radio.amateur.dx,rec.radio.amateur.equipment

Please spend a minute to read this, you may get a few thousands US dollars at least. It really works to anyone who follow those simple instructions. The guy who set up this is a smart guy, but who believe this and follow all is the smartest.

If you are a very smart guy or gal, please spend 5 more minutes to read the rest. Think very carefully and excute. My friend, a lot of money will flow into your pocket very soon.

- James

The original news I have received :

This is the fairest, most honest way I have seen to share in the wealth of the world!

Take five minutes to read this and it WILL change your life. If you want to know how to make thousands of dollars quickly, legally and with NO CATCH, then keep reading.

The Internet has grown tremendously. It doubles in size every 4 months. Think about it. You see those 'Make Money Fast' post more and more. That's ... because it WORKS! So I thought, all those users might make it work. And I decided to try it out a few months ago. Besides, what's $5.00, I spend more than that in the morning on my way to work on coffee and cigarettes for the day. So I sent in my money and posted.

A lot of users will join in and make it work for you.

Well, two weeks later, I began receiving money in the mail! I couldn't believe it! At first only a few hundred dollars, then a week later, a couple of thousand, then BOOM! By the end of the fourth week, I had received nearly $47,000.00. It came from all over the world. Every bit of it perfectly legal and on the up and up. I've been able to pay off all my bills and still have enough left over for a nice vacation for me and my family.

Not only does it work for me, it works for other folks as well. Markus Valppu says he made $57,883 in four weeks. Dave Manning claims he made $53,664 in the same amount of time. Dan Shepstone says it was only $17,000 for him. Do I know these folks? No, but when I read how they say they did it, it made sense to me. Enough sense that I'm taking a similar chance with $5 of my own. Not a big chance, I admit--but one with incredible potential, because $5

is all anyone ever invests in this system. Period. That's all Markus, Dave, or Dan invested, yet their $5 netted them tens of thousands of dollars each, in a safe, legal, completely legitimate way. Here's how it works in 3 easy steps:

STEP (1)
Invest your $5 by writing your name and address on five separate pieces of paper along with the words: "Please add me to your mailing list." (In this way, you're not just sending a dollar to someone; you're paying for a legitimate service.) Fold a $1 bill inside each paper, and mail them to the following five addresses:

1) S. Hogan
36 Prenton Lane
Prenton, Wirral
Merseyside, L42 8LB
England, Europe

2) J. Larsen
Grinnekaerrsvaegen 50
436 56 Hovas
Sweden, Europe

3) C. Mason
473 44th Ct. NW
Rochester
MN 55901-6666

4) H. Reichel
Hahnenstrasse 8
30167 Hannover
Germany, Europe

5) J. Yung
Flat C, 6/F., Tower 2,
Kornville, 38 Yau Man St.,
Quarry Bay,
Hong Kong.

STEP (2)
Now remove the #1 name from the list, and move the other names up. This way, #5 becomes #4 and so on. Put your name in as the fifth one on the list.

STEP (3)
Post the article to at least 200 news groups. There are at least 20000 news groups at any give moment in time. The more groups you post to, the more people will see your article and send you cash! It's recommended that you do AT LEAST 200 news groups for a lot of people to read it!

STEP (4)
You are now in business for yourself, and should start seeing

returns within 7 to 14 days. Remember, the Internet is new and
huge. There's no way you can lose.

****

Now here is how and why this system works:

Out of every block of 250 posts I made, I got back 5 responses.
Yes, that's right, only 5. You make $5.00 in cash, not checks or
money orders, but real cash with your name at #5.

Each additional person who sent you $1.00 now also makes 250
additional postings with your name at #4, 1000 postings.
On average then, 50 people will send you $1.00 with your name
at #4 ... $50.00 in your pocket!

Now these 50 new people will make 250 postings each with your
name at #3 or 10,000 postings. Average return, 500 people =$500.

They make 250 postings each with your name at #2 =100,000
postings =5000 returns at $1 each =$5000.00 in cash!

Finally, 5,000 people make 250 postings each with your name at
#1 and you get a return of $50,000 before your name drops off
the list. And that's only if everyone down the line makes only
250 postings each! Your total income for this one cycle is
about $55,000.

From time to time when you see your name is no longer on the list,
you take the latest posting you can find and start all over again.

The end result depends on YOU. You must follow through and re-post
this article everywhere you can think of. The more postings you
make, the more cash ends up in your mailbox. It's too easy and too
cheap to pass up!!!

If you're really not sure or still think this can't be for real,
then don't do it. But please print this article and pass it along
to someone you know who needs the money and see what happens.

GENERAL STEPS ON AUTOMATING THE PROCESS:

Make any necessary changes to this article as explained in step
(2) and when you're satisfied, save it as a .txt file and import
it into the body of your email or news reader program. This way
you only have to change the name of the news group or email address
for each redistribution.

Valuable tip: And very important for those not too familiar with
email: By all means use a word processor to ensure the article is
composed well, but to ensure people that first read it via their
news reader program see it clearly laid out. Re-format it with a
simple text editor such as "notepad," or "WordPad" if you're using
"Windows 95." Providing the text is clearly visible and does not

scroll into the right margin, it should be okay! Using this procedure essentially means the article will be correctly displayed when viewed through other people's news reader. You can of course check this out for yourself before going on line, by viewing it in your own news reader program.

Next, begin by locating the news groups you intend posting to, Netscape 3.0 or a similar news reader is terrific for this, because you can highlight dozens of news groups all at once, enabling you to distribute your article to 1000's of locations in less than an hour or two. Highlight all news groups you want to mail your letter to (which as you know is done by holding down CTRL while left clicking.) This way you can select multiple news groups in one go, choose perhaps a dozen each time. You will then see all news groups you highlighted displayed in the News groups Field.

Next: select/highlight your news groups, then click "To News" place a sensible title in the "Subject" location, click on "Attachments" where upon another box appears. Locate the file you are going to distribute, click on the file and then click "Open" again click OK; provided you followed these instructions, you should see your file greyed out in the "Attachments" box.
Hit send . . . and that's it.

Repeat the process over and over again by selecting further news groups in multiples of 10's but try to be selective with the groups by posting to high volume locations, and don't choose a subject that appears too flashy, this will only put people off. This is an honest and legitimate way of making a reasonable amount of money, and making it on a regular basis. But only if your message is sincere and clearly understood by others will you succeed.

PLEASE NOTE: This system is based on everyone being honest, but it's all too tempting not to bother mailing out envelopes with dollar bills inside. The success for all participating is dependent upon this taking place and if carried out will mean a 500% increase on your article being redistributed! The system won't work to yours or indeed other people's advantage if you don't follow the procedure. You can however, if you wish to remain anonymous use a pseudonym - but please ensure that your address is correct.

AS A FINAL NOTE: Many business ideas for making money, no matter how well thought out and implemented, simply don't get off the ground. And in most cases is due to advertising costs, but the exposure obtained through the Internet is quite honestly -- pretty awesome, so please study this article carefully taking all the time you want, because the moment you begin participating you will be on track for some serious financial rewards.

By the very nature of the way the system works you may not see the benefits the first week. BUT COMMENCING THE SECOND WEEK, YOUR INTAKE OF MAIL FROM AROUND THE WORLD WILL TRULY ASTONISH YOU!
Please give this some serious thought, because this is one of the few money making ideas that really does work.
The one that sends this file take no responsebility of the contents or substance of this text. The mailer of this text-file are not the author.

Cross-posted to: sci.electronics.misc,sci.electronics.equipment,rec.radio.amateur.equipment,nl.radio.amateur

Hi all,

I recently picked these up at a flee market and a surplus dealer, but without the manuals.

The HP 302A is a 'wave analyzer' from DC to 50 kHz, mostly solid state although I spotted some tubes (maybe stabilisers?). It has a Volt/decibel-meter, a max-input switch and a meter-fullscale switch for measuring input voltage. Also a tuning scale up to 50 kHz. Then there is this mysterious switch 'AFC/NORMAL/BFO'.
I played with it and it measures AC input accurately. In 'AFC' mode it seems to tune in on the input frequency if it is not too far off. I have not figured out the 'BFO' position though.
Does anybody know these this instrument? What was it used for?

The Marconi is a tube RF oscillator that works well, but its fine-tuning needs recalibrating. I'd like a manual (or at least schematics) before attempting this! From Marconi I learned that there are two manuals (probably user- and service-manual) with partnumbers HB TF995A/2M and HB TF995A/3S.

Any hints, tips, stories, advice etc is welcome. And ofcourse I would be very pleased with schematics or even manuals. Please contact me for costs involved.

Bart.

There may be a NOSPAM. in front of my E-mail address.
It is there to fool machines, not people.

6430. All NEW Service for your "PAGER"!!!!!!!

ONLY AVAILABLE IN THE:
U.S.A, CANADA VIRGIN ISLANDS, AND PUERTO RICO

BE SURE TO GO TO OUR SITE AND CHECK OUT OUR FREE TRIAL.

Call everyone and tell them to throw away all of your old home, office, fax, pager, voice-mail, and cellular numbers and give them your New "Virtual Office" 800/888 number! The only number any one will ever need.

Are you tired of giving out all of your different phone numbers to everyone? Wouldn't it be nice to be able to give everyone just ONE phone number that will find you anywhere you are? Even out of town, or in a restaurant, or even on the golf course.

Now you can.

We have the answer to all your communication needs. It's called the "Virtual Office".

And this new service is loaded. It comes with features like:

An automated Call Attendant, Live Call Connect (in real time), Fax Sending, Fax Receiving, Even without a fax machine! E-Mail Notification and Delivery, Without a PC!, Outbound calling, Low Cost Long Distance Service, Inbound/Outbound 800/888 Number, Worldwide Call Transfer, Call Forwarding, Call Screening, Full Service Voice Mail, Nation Wide Pager Notification, Conference Calling, Speed Dialing, Auto Dial, Auto Messaging, Temporary Greeting, Unavailable Greeting, Password Protection, Pager Notification, and No Equipment or Software to buy, "Ever".

Priced from $9.95* per month, Plus 10.9 cents per minute per event.

That's less than one phone line would cost per month.

For more information please visit our web sight:
http://www.mynumber.com

* Based on our best priced plan.

6431. Yaesu FT-76

My neighbor has handed me the following, with the hope that I might be interested in purchasing:

Two Yaesu FT-76 UHF handhelds with beltclips and FNB-27 batteries (12V 600mAh), an NC-42 quick-charger, and two MH-19A2B sub-mini spkr mics. They tune 430-450 MHz, and do not have DTMF keypads. They are in nice shape, and even have the original warranty cards ("must be mailed within 10 days"). Apparently, the company he works for had purchased them years ago for 2-way comms (!), but found them too complicated to use, and they've been sitting on the shelf for a while (they are now using legal Motorolas). The radios can be switched from freq display (with VFO) to channel display (no VFO - looks like a commercial radio this way). Can't seem to change to tone from 88.5 to something else; the instructions don't work.

I am wondering if anyone knows how old these might be, and what they are worth. I don't really need them, although it might be nice to have a frequency-agile handheld.

Pro Computers has just been opened in West Bath, Maine by Brian, N1KSZ and Mandee. They are selling amateur radio gear on consignment at the moment, and have applied for dealership licenses for ADI equipment and others. Additionally, Brian is the best PC guy I know of, and I recommend him without reservation. You can call them at (207) 443-2120, or e-mail Bryder@javanet.com or visit them at 359A Bath Road, West Bath, Maine 04530.

Hi David,

I'm now using this handheld since about 3 months and I like it very much.
About the aircraft reception; I can hear the approach from about 40
kilometers with the rubber-duck antenna so that shouldn't give any
problems.

Source record: 172562

The first radio I had when I was licensed was the TH-22AT. I didn't realize how much I disliked the receiver on it until I started realizing how quiet some of the other radios were that my ham buddies had. I got rid of it and went to an Icom IC-Z1A.

I bought an IC-T7A for my wife and it's got a new pulse mode squelch. It's all done digitally. That's the quietest radio I've seen, but the only drawback is that you can't manually adjust the squelch if you want to. Great audio, and it does have dual-band capability. If I had my choice, I'd go with the W32A from Icom.

I know a couple other hams who just bought TH-22AT and they are starting to realize they don't like the receivers either.

Hello -

Can the Radio Shack -2004 scanner be controlled
by a computer as can other models?

Have you done it, or have any experience with
'2004's that have been modified for computer
control?

What hardware is required?

Any commercially available boards/mod kits
that you'd either recommend, or suggest that I
should stay away from?

What software is available for the venerable PeeCee
can be used/ is good/ is rotten?

Any reference material you'd recommend?

Thanks for your time.

Hello. I have a PacComm Micropower 2 9600 baud, packet only TNC in good shape. It is in pretty good shape, aside from the serial# tag on the bottom has been ripped off, but it's written on the board. some of the features it's got are the optional DCD unit, a printer I/O card(I think that's for a dumb terminal, but not sure), and a TTL port for a C-64 in addition to the RS-232C port. only thing I don't like, is the mailbox. it only has 6863 bytes. It can also be used @ 1200 baud, with the changing of two DIP switches. It has served me well for a first packet station, but they'res no activity at 9600 in my area, and I didn't enjoy packet too well. I'll also throw in a serial cable for it.

I'de like to get it swapped for an HT like the ADI-200, an older mobile, or an HT amplifier. I'de like to get it swapped, but might consider selling it. e-mail me w/an offer. Anybody interested please get ahold of me before the 26th, as I am leaving for Florida for two weeks.

e-mail me at kb8zzs@hotmail.com, or call 216-577-1269, and ask for Sam.

Sam Bradshaw,
KB8ZZS.

> Lawrenceville, GA 30244 | | ke4zv@radio.org

The picture in the brochure is definitely that of the DSP filter only.
The characteristic stopband ripple of a Blackman-windowed filter is the
dead giveaway. The Kachina brochure and web site info tells us that the
receiver has not only the roofing filters at the 1st IF of 75 MHz, but
also L/C filtering at the 2nd IF of 40 kHz. What the ultimate
attenuation is, isn't given. We can only look at the specs to see how
the thing performs in the presence of strong QRM.

Other than the 3rd order IP, there isn't much to go on. Rumor has it the specs will be upgraded and more detail added in the near future. Let's reaffirm to ourselves that quite often, it's the IMD performance that really matters. The question is: how much of the other guy's receiver-generated IMD is falling in my passband? Kachina's unit has a high-level mixer front end, and since there isn't much of any filtering ahead of the mixer, the IMD performance is set by the mixer.

Let's also acknowledge that I'm not gonna be operating with my neighbor 5 kHz away. And I'm also not gonna expect +40 dBm IP from a receiver costing less than $10,000!

John:

If you want to make your TH 22AT deafer than a stone to intermod and just about anything else, try the Comet CH-32 Miracle Baby antenna. I use one on mine when I am in downtown Vancouver and it works quite well. If the problem persists and the repeater you are listening to is using CTCSS tones, you might also want to invest in the TSU-8 decoder for the TH 22AT.

I don't know if KR4WM actually sent this message, or if it's a forgery.
The reason I stop to question the authenticity is that it seems to be
admitting to operating illegal power. (I say seems, since it doesn't say
that the >1500W isn't in some other band where it's lawful, and it doesn't
say that everything over 1500W isn't absorbed in feedline loss, and it
doesn't say that it's >1500W ERP, all of which are ok.) Why would anyone
publish in a public forum a confession that their local OOC should pounce
on? I don't know. The fact that it was spammed to every group EXCEPT
.policy (to which this message and followups are directed) suggest forgery
to me also. Web, I hope you didn't post this and find the dirty bum who
framed you.

Addressing the question indirectly:

What license do you hold that authorizes >1.5kW? As my dentist didn't
tell me this morning,
"if it hurts when you do that, don't do that."

If running max legal 1.5kW causes problems, drop back to the power
neccessary to maintain communications, as provided for in Part 97. We
do not have authorization to run 1.5kW willy-nilly, that's just the MAX
we're allowed _when_necessary_ to _maintain_ communications, not when
necessary to plow through the pile up, that's called QRM as intentional
interference, which back when the FCC wasn't busy with politicians and
down-sizing was at least a pink-card offense.

I suppose it's my fault for reading the ARRL Operating Manual and Handbook
and studying for exams by learning the material rather than memorizing the
answers and assuming the real world works according to the rules as writ
HI HI only not very.

Have SB230 amp - 10-thru 80 - no manual - need a manual to sell this or make
offer without manual. Works good. Have replaced it because it would not operate on 160 meters.
e-mail me an offer or call me at 520-526-0556 during day or 520-527-0993 after
6pm.

Thanks for reading this inquiry. I am looking for input on the Outbacker antennas including their new tripod/ground coupler ground mount. I am searching for an antenna system that is portable yet works well.

If you have any comments or experiences, please e-mail me with your input. It will be appreciated. My e-mail address is: varpenns@usaor.net

Thanks,

Don (WB3CEH)

Go back to when Kenwood came out with the first run TH79A models.
Those idiots didn't out a lockout on their handheld and when you
wanted to scan memory, you had to scan all of them...How
ingenious...They then came out with the TH79AD and called the lockout
feature a "deluxe" version.

Hi All;
I would appreachiate if some one can let me knoiw the fair market value of the MC-4 Drake moblie console, It is kinda rare and contains an oval speaker and watt meter w/reverse and forward positions! Its in exc. condx but the previous owner decided to bend the mounting tabs from vertical to horizontal so to mount under something. It can be reversed, though!
Thanks es 73.....RICH RLUCCH2098@aol.com

Marty,

As I remember the 757 battery is about 1" long and 3/8" diameter that is soldered in. The only source I've found is Yaesu and they are reasonable on price. The entire board has to be removed to get to solder pads. While you are in the rig it would be a good idea to spray the controls with contact cleaner, tighten PCB mounting screws and do a general cleaning if needed. Oh yes, there are zillions of connectors to remove before you can lift the board so make a diagram first. Watch those rear top cover mounting tabs too - they are easily broken off.

Good luck. If we can help just EMail. Have a nice day and enjoy the 757 as it's a great little rig!

There are two mods for extended receive, one is a jumper cut in the rear upper right corner, or simply enter the unlock code #212 with the keyboard locked. The LCD display should show "open" or "closed," depending on the switch toggle.

6464. ICOM IC-820H 9600 Baud PacSat Mod

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-20 00:00:00 UTC
From: KG8EY <mhaunschild@fwb.gulf.net>
Message-ID: <33AAE5C0.76D5@fwb.gulf.net>
Source record: 172386

ICOM IC-820H 9600 Baud PacSat Mod

This mod is taken from ICOM factory service documents.

Some users of the IC-820H have experienced some difficulties (!) in operation of the IC-820H with the 9600 baud PacSats. This is due to the unavailability of the Sub-band audio at the accessory connector.

The Sub-band detector output is at pin 9 of IC20. Connection to this point through a 4.7K resistor will give you sub band receive audio for 9600 baud PacSat operation.

LOCATION:

You should be comfortable with working with surface-mount components before attempting this modification.

CAREFULLY remove the MAIN circuit board from its swing-out frame on the bottom of the radio. IC20 is a 16-pin MC3372 IC and is located on the bottom of the main board, on the sub-band receiver side (the side with only an SSB filter space). Don't confuse IC20 with IC11, which is the MC3372 for the main band and is located on the main-band side of the board (the side with both SSB and CW filter spaces).

I have not actually performed this mod, but the information is ICOM's, and appears to corroborate the comments in the QST review of the IC-820H. As always, you mileage may vary.

6465. ICOM IC-820H Extended Receive Mod

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-20 00:00:00 UTC
From: KG8EY <mhaunschild@fwb.gulf.net>
Message-ID: <33AAE646.3A8D@fwb.gulf.net>
Source record: 172387

Extended Receive for the IC-820H

This mod is taken from ICOM factory service documents.

VHF Band: 136 - 174 MHz Rx
UHF Band: 420 - 460 MHz Rx

No extended transmit.

These frequencies are not guaranteed for accuracy or sensitivity.

1. Remove diode D25 on logic board for VHF Rx expansion
2. Remove diode D26 on logic board for UHF Rx expansion

You should be comfortable with working with surface-mount components
before attempting this modification.

Location: This is easier to do than to describe, but here goes:

The logic board is located on the back of the IC-820 front panel.
These diodes are located in a string of 8 surface-mount diode
pads placed between the cutout for the main tuning encoder and the
lithium battery on the logic board. Some of these pads will actually
have diodes installed in them; some will not. The designations for
these diode pads are, from left to right (left being the encoder,
right being the battery):

D22 (not installed), D25, D23, D26, D24, D27, (not installed), D28

Non-US radios may have a diode installed at D22.

CAUTION: There are NUMEROUS wires, ribbon cables, etc. in this area;
be careful that you don't melt anything with your soldering iron when
you do this. Also, don't confuse these diodes with the string of
9 surface-mount resistors, located nearby.

This mod worked perfectly for me when I did it; just make sure that
you remove the right parts. I saved one of these diodes for use in
the cross-band repeat mod. As always, your mileage may vary.

6466. ICOM IC-820H Cross-Band Repeat Mod

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-20 00:00:00 UTC
From: KG8EY <mhaunschild@fwb.gulf.net>
Message-ID: <33AAE6E4.5BEF@fwb.gulf.net>
Source record: 172388

ICOM IC-820H Cross-Band Repeat Mod

This mod is taken from ICOM factory service documents.

1. Add diode (part no. 1SS353, ICOM p/n 1750000390) at the empty position between D27 and D28 on the logic board. The diode band goes towards the bottom of the board (same as the other diodes).

AFTER HARDWARE MODIFICATION:

1. Set lock mode (push LOCK button)
2. Turn power OFF
3. Hold (M/S) key and turn radio ON.

You now have a cross-band repeater!

4. To cancel: press (LOCK)

You should be comfortable with working with surface-mount components before attempting this mod.

Location: This is easier to do than to describe, but here goes:

The logic board is located on the back of the IC-820 front panel. The location for this diode is in a string of 8 surface-mount diode pads placed between the cutout for the main tuning encoder and the lithium battery on the logic board. Some of these pads will actually have diodes installed in them; some will not. The designations for these diode pads are, from left to right (left being the encoder, right being the battery):

D22 (not installed), D25, D23, D26, D24, D27, (not installed), D28

Non-US radios may have a diode installed at D22.

CAUTION: There are NUMEROUS wires, ribbon cables, etc. in this area; be careful that you don't melt anything with your soldering iron when you do this. Also, don't confuse these diodes with the string of 9 surface-mount resistors, located nearby.

This mod worked perfectly for me when I did it; just make sure that you have the right part (I used one of the diodes removed during the receiver expansion mod) installed in the right location. As always, your mileage may vary.

> W1HYV

I guess it depends on what you want to do, Alan.

Generally speaking, the International Radio filters (I assume that's who you mean; they bought out Fox Tango many years ago) have slightly better shape factors, and also are available in a wider selection of bandwidths than the manufacturers' filters. They are discrete crystal filters, not monolithic, and therefore tend to be slightly larger than the manufacturers' filters. Because of the better shape factors, you might get better rejection beyond the -6 dB points, but that depends on the design of the radio as well.

If you are looking for a dramatic performance improvement of some sort, I don't think you'll find it here. This is a subtle sort of thing.

In my case, I own an ICOM 751A, which has two crystal filters for each mode. I purchased IRC's 2.1 kHz filters for the second and third IFs, replacing the stock ICOM 2.4 kHz filters. The second IF filter had to be mounted remotely and cabled to the circuit board because it was larger than the stock filter; the third IF filter was a drop-in. The result? A little less of the "squeakies" and "rumblies" caused by nearby signals. It's a good contest setup (which is why I bought them) but for casual chit-chat it's not worth the money.

I noticed that recently IRC moved completely across the country from Florida to somewhere in the northwest. I have no idea if this makes a difference in their quality.

Hope this helps. 73

From: WA0KDS <WA0KDS@mcipnet.com>
Message-ID: <33AA79AF.5E2@mcipnet.com>
Source record: 172390

Hi Jim,

I have been using a Rohn tower for years but I have been using it as a guyed tower. Rohn still sells the tower so you should have no problem getting all the specs on it. I have three beams on a 48 foot tower. One of the beams is a 5 el 20m KLM 42 foot boom. One is 3 el 10/15 and a 4 el 6 m. This is how I get this tower to take this kind of load first as I said I guy it about 6 foot from the top and about 24 foot from the top. Next I did not us the very top section of this tower it was originally a 56 footer so I made a new tower mast support for the next section which now is my top section. Next I do not but the big beam more then 2 inches above the top of the tower and the other two beam are closed spaced all within 3 foot of the top of the tower. Next I place the rotator in the second section from the top and made a new rotoator support plate. By the way the tower is sitting right of the ground with no concrete and has been up or almost 20 years. The Rohn towers in the self-supporting mode are only suppose to be good for a big TV antenna. Well that is my story.

From: bobw@col.hp.com
Message-ID: <5ocv8f$qb3$1@nonews.col.hp.com>
Source record: 172393

Yaesu has a new dual-band HT, claimed to be the world's smallest
dual-band handheld with wide-band receiver coverage.

500 mW power (1 W with external power adapter)
290 memories
6 char Alphanumeric display
Built-in CTCSS and DCS encode/decode
AM /air band

http://www.yaesu.com/vx1.html

Has anyone seen one of these yet? Like at Dayton?

Ham Radio Outlet's web site shows a price of $299.

The problem here is that Japan wants the 222 MHz band to die. It is a police band in Japan and they do not allow any equipment which can even recieve 222 to be sold in Japan and would prefer that non be manufactured.

They make the 222 gear high priced and hope no one will buy it. If you notice there is almost no 222 gear sold and no new models. This is a Japanese Government policy and remeber they play as a big team so the manufacturers all fall into line.

I fyou talk to HRO and AES guys on the coasts you will find that Japanese tourists are always buying the 222 radios and smuggaling them back to Japan. One common practice is to bring or ask for a 2 meter equivelent models box to carry it back home.

Kind of like our cell phone thing :)

73's Mike,

The mods for the MKII are not the same, the main board is not the same, components are arranged in a different manner.

I'm searching for 2 months now this modification, someone told me that I have to cut (remove) three diode d116, d118, d119 on the main board near the 9mhz ssb filter. But I can't even localize these diodes... and the mod is not guaranteed ! So be carefull. If u have the solution or hear about something on this u can email me at efa@euronet.be

Thank u 4 your time Mike,

best 73's,
Erik
OT7EPL

6478. WTB: Alinco EBP-10N battery (for DJ-162/160/560)

Newsgroup: rec.radio.amateur.equipment

From: <>
Message-ID: <33ad5e0b.764720@news.eunet.yu>
Source record: 172436

Hi!

Anybody has (or knows where I can get) EBP-10NA (7,2V/700 mAh) battery for old but still operating Alinco DJ-162TD, for sale? It doesn't have to be EBP-10NA, just any matching to above mentioned handheld which is 'compatible' with even older model DJ-160.

It could be new, or used but in good shape, or used with dead cells inside or even just plastic case of that battery (w/o cells inside). Also, I am interested for other accessories You might have for it. Please feel free to offer anything related to DJ-162.

Thank You very much in advance!

Slobodan, YT1RVS
<ljubisic@EUnet.yu.>

P.S. to avoid receiving those bulk junk mail messages, I've added one extra point at the end of e-mail address. Please have it in mind when replying. Thank You!

I'm looking to purchase a few accessories for an Icom IC2-SRA radio.
They are the BC-72 desktop battery charger or AD-20 charge adapter.
I'll also like to secure an HS-60 headset. If you have any of the
above items, pleasee-mail me with your offers.

After getting the run aroumd from the USA branch of Icom/Kenwood/Yaesu
I have found it easier to go direct to Japan for answers. I work for a
large Japanese manufacture (similar to Canon, Sharp,Sony etc).
Many of the Engineers I deal with are Japanese and have friends and
coworkers in Japan. It is easy for me to find out the WHOLE Truth about
things such as the Icom 706 MK II DSP etc. As I come into more info
about any new radios out on the Horizen etc. I will share it with this
Newsgroup. Sometimes I am not 100 % correct but usually 95% I am right
on the money. For instance, Kenwood came out with the TS-570D and
TS-570S without my contacts at kenwood tipping me off. I have since
incorperated "interigation tactics" used by Sadam Hussain.(Very
Effective).

Is there a source of detailed CB to 10 (or just CB channel expansion)
mods on the WEB? It would make a nice club project to convert CBs to 10
but you have to know which radio's are the 'easy' ones to convert.
Jim

The mod is just a keyboard entry, no opening the box. The
instructions are in the manual, I don't remember them, I haven't
needed to do it, but recall reading them.

E-mail me if you don't have the manual and I will try to look it up
for you, or better yet call RS and order a new manual

My thoughts, too. I bought a 220 HT when Novice Enhancement gave us 220 and was really welcomed by the 220 crowd in the Seattle area. The antennas are smaller than 2 meter and cover better than 440- I liked it. I moved out of town and couldn't reach the repeaters any more and I sure miss it.

RE: phone patches- I think cell phones are an overall better deal than phone patches. Better coverage, better sound, better features.

6501. Alinco DJ-G5T Mods

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-20 00:00:00 UTC
From: n2ah@sprynet.com
Message-ID: <866827409.5169@dejanews.com>
Source record: 172459

I received E-mail from Alinco stating that the DJ-G5T will RECEIVE 108 - 174 MHz and 420 - 511 MHz after the "MARS /CAP modification." However, they say "We cannot discuss the modifications unless you are a valid MARS/CAP member."

Give me a break! They won't tell me how to expand the *RECEIVE* range? They took the same position on the DJ-F1T aircraft receive mods a few years ago, even though their ads boasted that the radio would receive AM aircraft transmissions.

Does any have the mods to achieve the above receive coverage? Any info will be much appreciated.

Thanks,
Art (N2AH)

> Although it has went back for warrenty repair today. Hey, you dont
> think this is a pattern do you?

Yep, I do get wound up once in a while, Jim. It seems as though Icom is always pulling some boneheaded trick that ruins their close-to-perfect radios. They come so close and then just can't seem to handle the idea of success. For example:

The Icom 751A is a superb radio, BUT, when the lithium battery fails, and it will, it forgets it's an amateur radio and has to be sent back to Icom for reprogramming of the basic operating system. Close, but no cigar. Or what about the HF rigs with tuning knob bearings that seize? Duh! This is not a high tech area, people. No excuse justifies having to replace bearings in a tuning knob. I'm sure we humans had that technology perfected in the forties, for crying out loud.

Now I guess I'll have to fess up. I probably WILL buy another Icom radio someday. There, now are you happy?

73,

Ed, NM2K

>The next one I know about is the TS-50 (great numbering scheme) and it
>is not a cw tranciever.

The TS-570D (and S) came out to replace the TS-450S last year. AFAIR,
all the current Kenwood rigs are 13.8V, with the exception of the TS-
950SDX, which has an internal PSU.

The moot point is "What is a mobile radio". Do you include the midi
sized radios (like the TS-450S), or only the real babies (IC-706, Alinco
DX-70 and TS-50)?

The TS-50 will do CW, but I've never used one. There is an optional CW
500Hz filter listed - not sure how good it is, though. Personally, I'm
quite happy with my TS-450SAT.

<SNIP>

i had this trouble without a radio in a gm product.

the problem for me was the regulator? (inside the alternator)
apparently there is a "switch" that allows current to be directed
here or there. that "switch" (probably a diode???) was bad and allowed
the alternator not to charge much more than a "surface charge" and
remained open so that the battery drained EVERY night, even AFTER i
bought a new battery.

i'm sure there is a more accurate way to describe these events, but
i ain't that smart. nonetheless, ask around, there are folks who
understand the in's and out's of the automotive charging system.

6509. Ic-756 Question

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-20 00:00:00 UTC
From: hershman <hershman@ix.netcom.com>
Message-ID: <33AADA9A.52C2@ix.netcom.com>
Source record: 172467

Does the Icom 756 have Dual receive simulaneously?
I know the Yaesu has Duel watch in/out of band. The yaesu will go to the second frequency every predetermined time to check for activity. However you can't listen to two frequencies simultaneously.
The Icom calls its version also Dual Watch but say you can listen to two stations in the same ham band simultaneously.

Do I have my facts correct??

6510. Newbie question about mods

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-20 00:00:00 UTC
From: Roger Tomas <tomasr@agcs.com>
Message-ID: <33AAE399.1D62@agcs.com>
Source record: 172468

I'm currently studying to become a ham and have just started
following this newsgroup. I've seen a lot of posts about mods
for different radio models and have some questions:

(1) Is there a FAQ for this newsgroup? If so, where can I
get it?

(2) Do people typically modify the receiver, the transmitter,
or both?

(3) What are the reasons for doing this?

(4) Is it legal?

(5) Does it affect the reliability or life of the radio?

Any info would be greatly appreciated. If my questions don't
make sense (and I wouldn't be surprised if they don't), please
just help me understand "mods". I may buy a used HT and may
be confronted with the decision to buy one that's been modified.

Thanks in advance.

The 738 (very similar?) has three different settings just for this purpose. Of course, that may mean nothing if one of the differences in the radios was the tuner. I believe they are accessible from the top of the radio (no access door).

6515. FT-50 Comments, Questions

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-20 00:00:00 UTC
From: Connie Hulst <chulst@polar.polarcomm.com>
Message-ID: <33AAE3B3.3B48@polar.polarcomm.com>
Source record: 172473

I recently purchased a Yaesu FT-50 with the FTT-12 keypad standard and I love it. In response to a few bugs that have been reported,

* CTCSS falsing--This has happened occasionally when another station on frequency sends a DTMF tone. Otherwise, not a problem.

* Crackling sound in transmit, low transmit deviation--Not occurring on my unit

* Voice Mail doesn't work--I haven't tried the digital voice recorder yet, so I can't say

* Wide FM bug--Still a problem, but I never use it anyway

When doing the modifications, I strongly recommend buying the ADMS and using the software mods described by ingra-beton@t-online.de (thanks for the info!)

I know this question has been covered before, but... would someone please recommend a good antenna with a built-in SMA connector (I don't want to use an adapter.)

6516. Original HF Radio Power Connectors Available

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-20 00:00:00 UTC
From: toms@inconnect.inconnect.com
Message-ID: <5oese3$s3u$1@news.inconnect.com>
Source record: 172474
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew

These connectors are now available from ICOM America. The cist of the connector is $1.22 each + $2.00 handling & about $2.00 US Mail. I ordered 10 so this comes out to 1.62 per connector. The connectors come with the pins and will work with Yaesu, Kenwood, or Icom. These are the REAL thing. No longer do we have to buy look-alike connectors from the Hudson River Valley that do not really fit. You can get these from Icom America Parts Division by calling (425) 454-7619. At the prompt, press 3 for parts.

Note that since the handling charge goes down as the order goes up, this may be a good item to ask how many at a club want one. The club could add a dollar for each connector to buy code tapes, etc for new hams.

BTW, I am using Anderson power poles for all my radios but it is still great to have the original soldered to the wire from the power supply. With the power pole, we could forget the power pole to JST (HF Radio) connector.

STOP !!!! This is NOT the correct MOD!!!
DO NOT DO IT! I will POst the Correct Mod in two days!!!
The New mod is 3 DIODES but they are different than the ones you posted!
The mod is easy. You need a VERY small tipped soldering Iron.
I have to do some editing of the Post I have from one of my informants!
If I just repost it he will be discovered and possibly terminated from
his Job. In fact I will rewrite it all over for monday. I got two
confirmation the mod works! COMPLETE TRANSMIT FROM 200HZ to 200 MHZ
UNinterupted!!!!

I will keep you posted. NS1R Steven Hershman

Likely either the SWR detection diodes or some of the caps for the
various band are in trouble. Which band does this happen on ?
Does it also happen into a dummy load ?

6533. Yaesu FT690 Backpack radio: Is performance OK?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-21 00:00:00 UTC
From: jjg@powernet.com
Message-ID: <5ohefujbv1@kayrad.ziplink.net>
Source record: 172333

I'm thinking of getting on 6 with a Yaesu 690 backpack radio. This unit is the one that disconnects from the final amplifier, giving you a small, portable, 2 watt unit.

Does this radio offer sufficient performance for decent 6 M work (whether AM, SSB, CW or FM), or did they compromise a lot of things to make the unit portable?

Thanks
Chris

> 73's NS1R Steven Hershman

Don't trust Steve "I never met a Yaesu I didn't like" Hershman. I have it on good authority that Hershman is a saboteur hired by an unnamed ham radio manufacturer to badmouth Icom. He does this because his wife was electrocuted by a Icom 730 that someone converted to 1 KW output. Hershman hasn't been the same since.

He gets his instructions over secret HF equipment given to him by his employer, and he spreads misinformation via the internet. He's wanted by Interpol, the FBI, and the HRP (Ham Radio Police).

Take whatever Steve "the Kenwood kid" Hershman says, and turn it around 180 degrees. This will produce the truth. Then run for the hills. Hershman's out to get ya!!!

While there are more sophisticated six meter rigs available, the FT-690R Mk.II is unique unto itself.

Yes, it is a usable unit and does perform well. The 690R MkII does not offer the AM mode of operation. However, FM, SSB and CW all work very well. With a decent antenna, you will be amazed at how far you can work locally with just 2.5 watts. When the band is open, 2.5 watts is enough to work the world. Naturally, for extended local communications you will want to use the 10 watt amp (supplied) and maybe even consider using a brick to bolster the rig's effectiveness.

Is it a good buy at its current price? This is a tough one, truthfully. If you value the portability of the unit, then I must say that yes, it is priced reasonably. If, however, you are only going to use it in the shack, you might consider some other rigs that were made a few years ago.

Personally, I love that little FT-690R and wouldn't part with it for less than $550.

I have all both sets of mods 1) 200HZ to 200 MHZ continuous
and 2) .5 to 60 MHZ and 135 to 175 MHz

I am waiting to here from my brother in law the Lawyer to see if I can
be sued by someone doing the Mods incorrectly even though the Mods I
post are correct. Last time I posted the Correct IC-706 MK I mods I was
threatened to be sued by an angry parent who had a teenager "butcher"
the radio trying to do the 60 MHZ to 200MHZ TX mod (not easy).
If My brother in Law says oK I will post the mods.

I am asking $175.00 for my Sony ICF PRO-80. It is 8 years old, but in excellent condition. Only used about 50 hours. It comes with the original box, manual, and earphone and carry case, which was never opened. It also has a BNC plug to handle an external antenna, or it operates from the included original telescoping antenna. Primary frequency coverage is 150KHz to 108MHz continuous, and 115.15MHz to 223MHz continuous with the included frequency/antenna converter. It has a PLL synthesized receiver, with FM & AM narrow and wide, and SSB detection modes. The AM modes and SSB have a fine tuning knob which gives plus or minus 3.5KHz in SSB. It has 3 scan modes, which will scan bands, or the 40 memories.
It uses 4 AA batteries which last approx. 10 hours, weighs 1lb. 7 oz. and is 3 5/8 x 7 1/4 x 2 inches.It will also run on 6VDC, but I do not have an AC-DC power adapter. (They are available at Radio Shack.) This radio has an excellent speaker and sensitivity for a portable. The fine tuning works well in selecting SW/SSB signals. It is particularly sensitive in the HF bands. So much so that I have never felt a need to connect it to an external antenna to bring in more signals. It has a vertical stance, so it is easy to hand carry. Please send me an E-Mail if you are interested.

> I have an ICOM VHF radio that is in need of a 3SK97 dual gate MOSFET.

In my old ECG replacement book it equivalent to ECG222 and data are as follows:
dual gate MOSFET, N-channel, transconductance 12000, NF 6dB at 200MHz, Vgs(gate to source cut off voltage) 4V, Idss 5 to 35mA, Gate to source breakdown voltage 20V, input capacitance 6pF,transfer capacitance 0.03pF, Pd 330mW.
Package TO-72 and terminals (looking from the bottom, cw, starting at the tab): D,G2,G1,S/case.
As a replacement you can use BF981 , BF982, 3SK122L, 40673 do not have my Motorola RF Hnadbook handy, so don't know any modern devices that you can use. If you need more info, e-mail me directly,

Hi,
Has anyone out there had any experience using the LMR N-type
clamp (not crimp) connectors? I'm about to buy some bulk LMR-600
(regular and flex), and am considering just getting the prep tool and
doing the terminations myself. Will I be able to get similar results
to factory installed crimp connections?

Thanks.

6565. Re: Want FT-920 Comments

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-21 00:00:00 UTC
From: Bart Hackemack <hackembl@ix.netcom.com>
Message-ID: <33AB9B1B.3BF3@ix.netcom.com>
Source record: 172407

I've had mine for around a month (FT-920). Moved up from an
FT-747 to the FT-920. The 920 is an awsome radio.

Nothing I can say bad about the radio. One very! minor annoyance
is if you turn the monitor gain up you may get a small buzzing
in the speaker depending on how much noise blanker gain has been
turned up. That's very minor. Oh, yea, one other thing, the
radio really should have the FM board already in without purchasing
an add on. Admitadly, the board was quite reasonable, less than $80.00
and was installed in less than 5 minutes.

Have not worked alot of dx but all the reports I've recieved
indicate very clean audio even with fairly weak reports such
as 5/5's. I think that is due to the digital audio processing options.

(I've worked some DX though, SaiPan, Canada, Alaska,
and Hawaii. That's not bad for me since I'm running a shortened
G5RV up about 20 feet.)

The DSP is fantastic, I like the noise blanker and noise reduction
options as well. Quick memory options and call "channels" for
each amature band are all very slick. And the abilty
for memory to remember which antenna is used with what bands is
quite nice.

6 Meters. I have a very marginal 6 meter antenna. A copper
water pipe dipole strapped under the eve's of my house, up a whopping
10 feet and never run more that 10 watts. I'm not burning up 6 meters
but have made contacts throughout southern California, Utah and Montana.
(I live in Southern California).

From my experience, the 920 is an awsome bargain!

Good luck...

73's de KN6PL...

Soon as I hear from my brother in law the Lawyer I will get back to the newsgroup. Last time I posted the original IC-706 MK I mods I got threatened with a lawsuit from an angry parent whose son "butchered" the radio trying to do the 60 MHZ to 200 MHZ transmit mod (not easy). The diodes on the IC-706 MK II are TINY and you could do damage to the radio if you are not carefull. I just don't wan't to be sued by people who wreck their radios doing the mod. The Mod I have is correct and if done carefully will open the transmit 200Hz to 200 MHZ continuous!

= = = = = =

John,

Late seeing your post but will throw my two-cents worth in.

Satellite phone (e.g., INMARSAT, etc) is a pretty good option.
Keep in mind that Alaska is fairly rugged with some steep terrain.
Those signals are very subject to "Granite Attenuation", they
don't pass through mountains very well if you happen to be in
a vally when you need the communications. Also, most of those
birds are down on the equator, so check the footprint.

Back to H.F. for a moment, depending upon "when" you go, there
are atmospherics unique to the far north that raise havoc with
H.F. radio reception. There are networks set up for Alaska to
provide "telephone-like" communications, that may take that into
consideration.

You might consider looking into the H.F. services of Globe Wireless,
they have a WEBSITE, who provide Maritime Comms. There may be a
grey artea in the legal aspects that would allow support to H.F.
packet type communications.

When do we leave?

Dave

>I'm currently studying to become a ham and have just started
>following this newsgroup. I've seen a lot of posts about mods
>for different radio models and have some questions:
>
>(1) Is there a FAQ for this newsgroup? If so, where can I
> get it?

There's no FAQ specifically for this newsgroup, but there is a
generalized FAQ for the complex of personal radio newsgroups.
It is posted periodically in rec.radio.info.

>(2) Do people typically modify the receiver, the transmitter,
> or both?

Generally both. Most radios already have out of band receive coverage,
though it may be less than the radio is capable of supporting. Out of band
transmit generally requires a mod.

>(3) What are the reasons for doing this?

Frankly, there aren't many good reasons to do this. Generally, amateur
radios are a poor substitute for a scanner, and aside from use to drive
a transverter, there are very few legitimate reasons to modify an amateur
radio for out of band transmit. Some mods enhance performance, however,
and that sort of mod is always welcome. That's a different class of mods.
For example, a mod which makes the noise blanker of a radio work better
is definitely desirable. Or a mod which reduces IMD problems is definitely
desirable. Etc.

>(4) Is it legal?

In the US at least, it is generally legal for an amateur to modify an amateur
radio in any way he sees fit as long as it doesn't violate good engineering
practice. Offering radios with certain modifications for resale can be illegal,
however. And *use* of the radio on frequencies where it isn't authorized
is illegal. In other words, it may be legal to modify your personal radio to
receive cellular phone transmissions, but it would be illegal to *use* it to
actually listen to cellular phone (that's outlawed by the ECPA). Similarly,
it may be legal to modify your radio to transmit on the frequencies of another
service, but it is generally illegal to actually transmit on those frequencies.
(MARS and CAP operation are legitimate exceptions to this.) So unless you
intend to violate the law, there's really very little legitimate reason to modify
a radio for out of amateur band operation.

>(5) Does it affect the reliability or life of the radio?

It can. That's very much dependent on the particular modification,
and the skill of the person doing it, of course.

>Any info would be greatly appreciated. If my questions don't
>make sense (and I wouldn't be surprised if they don't), please
>just help me understand "mods". I may buy a used HT and may
>be confronted with the decision to buy one that's been modified.

That's definitely caveat emptor. Unless you can determine precisely
what has been done to the radio, and the level of skill of the person
who did it, you're buying a pig in a poke. Don't expect any support
from the manufacturer if you have problems.

>

Not generally. The Japan version has a different CPU than the U.S.
version and messing with the diode matrix simply does not work to
expand the radio. Japan placed limits on radios sold in their country
a few years back, so the frequency range is locked by the CPU
firmware, not the initialization diode matrix. Also there may be
other circuit changes as circuits are optimized for the frequency
coverage.

I have for sale a Ten-Tec 544 digital HF xcvr and 262M pwr supply.
This rig is in very good condition and has the following specs:

80-10 meters (SSB, CW)
100 watts output (adjustable from 0-100 from front panel)
Digital Readout
Full Break-in Keying
VOX

I am the second owner of this rig and have the original box and manual.
Price is $450, plus shipping, for both the 544 and 262M.

Hello Again Carlos
Another idea for your project is to subscribe to the Ham University
Mailing List and make your request there. The information for
subscribing is as follows:

```
ham-univ: University Ham Radio Clubs Mailing List

Purpose: This mailing list is for people that are interested in Amateur
Radio Clubs at Universities. Club activities, funding sources and other
issues that come up are discussed on this list.

To subscribe: Send mail to ham-univ-request@listserver.njit.edu" with
text (not subject): subscribe ham-univ Your Name
To post: Send mail to ham-univ@listserver.njit.edu

6592. FT-2400 Display Freaks Out

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-22 00:00:00 UTC
From: trinit69@idt.net.nospam
Message-ID: <trinit69-2206971147070001@ip17.lafayette.la.pub-ip.psi.net>
Source record: 172235

The wife's FT-2400 radio has a display freak out problem once every few months making a complete reset necessary.

It only does it when the rig is hooked up to the accessory circuit of her Mazda, that is, the rig momentarily goes off when the car is started, and then back on when the car starts (just like the AM/FM car radio). Sometimes the thing comes back on with all the display elements lit (freaked out).

It never does it when hooked to a hot battery circuit, even when starting.

The reason I have it on accessory is that the wife always forgets to turn the blasted thing on, and thus it is useless on a battery circuit, whereas on accessory, I can call her and she says "gee, I didn't know that thingy was turned on!"

Anyway, I think some weird transient is getting it on accessory and not on battery.

How can I combat these transients?

Source record: 172245

I also had the same problems as Gary did with the HX-212. First radio was
junk from start. I sent it back for repair and it got to the wrong place
and got sold, so they said. They replace it and that radio had the same
problems as Gary described. They fixed that radio and it has worked fine
for 1 year. They later found my first radio and wanted to know it I wanted
it. It works great now. Bill/KB8ZW
==========

Has anyone out there had any problems with their RS htx-212/242
mobile radios. We had a few with the PIN switching circuit burning
a hole through the circuit board. Also the final breaks into
oscillation on the HTX-212 in high power (45 watts). We also have found
the HTX-242 radios are having a problem with the CTCSS and DTMF not
having the right frequency and or low deviation. If you have seen these
problems with these two radios please e-mail me with the details of your
problems and what Tandy did to resolve the problem. A few of us have
been burned by Tandy with these products. I myself went through six (6)
radios starting with the HTX-212. I now have the HTX-242 and I still
have problems with the radio, the deviation is too low on the DTMF
output from the radio. There is no DTMF/CTCSS level control. All
signals go to a single deviation control (RV1) per the schematic.
Please e-mail me if you had problems. We need all the support we
can get on this matter since Tandy states that the radio has no known
problems. If you are going to purchase any of the amateur line from
Radio Shack, do yourself a favor and get the extended service (TSP).
Thank You
Gary

Because (Someone correct me if I'm wrong) on the FT-1000MP and the FT-920, which is what the MD100A8X is designed to work with, pin 2 is

for +5 volts. On the FT-1000D, FT-990, FT-890, FT-840, etc., pin 2 is

a ground.

Also, just the opposite has to be done to use a MD-1 on a 1000MP or 920.
Pin 2 must be opened on the MD-1 and regrounded elsewhere.

Bob

I had to replace the lithium battery in my FT-757 GXII two years ago. I was able to carefully peel the metal tabs off of the old battery and I obtained a replacement cell at Radio Shack (it is a 2/3 N size I believe). Anyhow, I was able to resolder it to the old tabs and it works. What I really want to do is get a cell holder from Digi-Key and install it. But the cell holder is only $.80 and is probably more work than the number of times I will ever have to replace the cell.

Is there such a thing in existence as a pl tone generator that can be incorporated into an older rig? I have an old Yaesu FT227R 2 meter rig that I like to use in my car. Granted it is a dinosaur, but it still puts out a signal and works great.

Here is my dilemma, one of my favorite repeaters is occasionaly pl'd therefore I am locked out at those times. I would like to be able to buy or build a pl tone generator that I could use with my older rig.

Source record: 172270
Cross-posted to: rec.radio.cb,rec.radio.amateur.equipment

I have a couple of Realistic handheld CB's belonging to our sports car club with dead microphones (I'm guessing--something in the tx section is kaputt on all channels). One is a TRC-222 3 channel, the other a TRC-223 40 channel. They both appear to have the same type of mic, but I don't know if it is an ordinary electret or something weird. Does anyone have a part number or know if a generic electret can be substituted? Is mic failure a common problem with these units?

TIA,
Craig Blome

Yes the 30-L1 will do 10 Mhz, and yes, you'll have to give up a band.
Refer to your manual and retune the appropriate inductor on the input
circuit, associated with the applicable "band". The ALC problem you'll
have to work out, vis a vis voltage amplitude and load res. 73, Jeep

Call CommSpec at 800-854-0547 and order their SS32 encoder....dip switch
programmable and they have sheets on how to install it in the FT227R..
I have such a rig and put my SS32 external in a small box with their
optional switch that lets me select ALL 32 PL tones...so I dont have
to remove the covers!....Have to rewire the ACC plug on the back of the
227R but its easy to do..

Source record: 172276
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew

Forgive the newbie question, but...I belong to a local sports car club that puts on autocross events. The starter communicates with the timing van right now using a pair of Radio Shack 49MHz intercoms, which aren't ideal for this task as they don't seem to have noise cancelling microphones, and so the starter's voice is often drowned out by very loud engines. I'd like to find something with a better mic, but can't justify the expense for a David Clark pit headset or the like. Is there anything out there that doesn't require a license? Might the cellphone headsets now available work with a CB, or maybe one of the new FRS radios?

TIA,
Craig Blome

You're right, it's a neat little radio. But I can't get mine to do that either. It doesn't want to cross between bands automatically at all. The other trouble I'm having with it is that it won't open the squelch at all if you're using tone squelch in scan. oh yeah, it will only do T-Band channels in the UHF-TV band (which means it won't scan them with other commercial uhf channels) not good.

Yeasu builds some great radios but they also build our hopes up too.

I do like all the receive capabilities. I'm keeping my FT-50 but maybe this is a good 'holdout' radio.

. o O (I wonder if yaesu makes an ANKLE HOLSTER for it!)

I have decided not to post the mods. They all work. I don't want to be
responsible for people destroying their radios. I don't have faith in
the ability of the average ham desoldering surface mout diodes.

If you have the model numbers of the units, you can get them directly
from Motorola Parts Department in Schaumburg, IL. They will sell them
to anyone.

6646. IC-706 Mk II price $1050 !!!!!

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-22 00:00:00 UTC
From: hershman <hershman@ix.netcom.com>
Message-ID: <33ADDE67.2194@ix.netcom.com>
Source record: 172289

If you go to Icom Japan Web page it list the price of the radios in Yen.
Simply divide the Yen price to get the USA dollars price. Some hot
selling radios are marked up Big $$$ in the USA like the Icom 706 MK II.
I am going to see if I can buy the Icom 706 MK II direct from Japan.
The Ic-706 MKII costs 138,000 Yen /122 comes to $1050 !!!Most dealers
want $1280 for the radio!We are overcharged $230 !!!
WE ARE GETTING RIPPED OFF!
However, the ICom 756 is slow moving so we get a great deal!
The japanese price is 258,000 Yen /122 comes to $2100
Most USA dealers sell the radio for $1930 . We are saaving $180 !
The Yaesu FT-920 costs 198,000 Yen /122 comes to $1650. We are paying
$1750 for the radio. We are paying $100 more because it is selling well
I thought the Mans on the Newsgroup would appreciate it if I can find a
way to buy the Icom 706 MK II direct from Japan and save them $230 or
more on some models.

> EVER again. My way of thinking is that if a 1 watt resistor is good, then

> a 5 watt must be better. That was why I specified >1500 watts. I want to
> give it the BEST RFI protection possible.

It will be difficult to get a hold of anybody at Fisher - I think they were
bought out.

Try to determine by what path your signal gets into the VCR. Is it the
antenna/
cable input? (try disconnecting it...) is it some sort of ground loop in
conjunction
with the TV? (unlikely, usually these things are ungrounded) Or is it the
power line?
I doubt it is radiated interference, it is far more likely conducted-type
that is causing
the problem. Once you find the path you can search for an appropriate
filter.

>
> Sheesh again.
>

Actually this is not such a crazy argument...

Even though an UPS is a superset of an inverter, there are different design
considerations in each case. In a very competitive market products are
designed (at least by honest firms) to JUST meet their specifications.
Any overdesign represents lost profit.

A stand-alone inverter is assumed and usually specified for a surge and
a continuous power rating, but the inverter in an UPS is specified for
short
term usage, the life of the batteries. Frequently UPSs do not have
published
"surge" ratings even though most certainly have the capability to drive
higher
loads for short periods without going into overload trip.

The semantical argument carries weight in this instance.

> climb this stuff and feel safe? 3 how large should the base be
> poured?

I suggest you contact Rohn for the stuctural and installation specifications for this tower rather than winging it on advice from the newsgroup. Your local jurisdiction may require the engineering specs in any case, and knowing what they are may keep you alive.

The HBX-56 is rated at 10 sq.ft. antenna load at 70 mph. A key limitation of these towers is that are designed for antennas with boom lengths LESS THAN 10'. Its designed to be free-standing.

You can reach Rohn at P.O. Box 2000, Peoria, IL 61656. Also, Texas Towers in Plano, TX and I'm sure many other ham shops carry the Rohn Ham tower catalog, which has complete specifications.

6660. Collins 30L-1 ????

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-22 00:00:00 UTC
From: Dennis Spiess <dspiess@idt.net>
Message-ID: <33AD10F8.3019@idt.net>
Source record: 172364

I've inherited a 30L-1 amp. I have two questions that perhaps someone could help me with:

1) Are there any published mods to put the 30L-1 on 10 Mhz, my favorite band? Yes, I would be willing to give up a band if needed, say 80M.

2) Can the ALC be hooked directly to the alc of a Kenwood TS-440? The 440's alc requirements are -8 to -1 VDC. The 440 sure drives the rig OK but I have not connected the alc yet.

Hey, thanks I really appreciate this and look forward to using my 'new' amp.

Icom 756 posts have been sparse lately so I'll attempt to correct
that with a few of my own impressions of IC 756 serial #1137.
Ostensibly one of the earlier units with no modifications to date,
that has performed flawlessly since the date of receipt 02/05/97 from
Barry Onigman, N1DNU at Ham Radio Outlet in New Hampshire.

I had a pleasant visit with Jim Newcomb N7MBA Icom National Sales Mgr
and Ron Spencer KB7ZJA Dist. Sls Mgr at Ham Com here in Dallas. It
was stated without equivocation that Icom is aware of the MINOR
problems in the rig and has thusly assigned one specific individual to
be in charge of modifications. Accordingly when a unit is transmitted
back ,a vivid notice indicating IC 756 Mods should be posted both
externally and internally to the box. The turnaround time will be
considerably less than other types of repair.

As an overview, I am extremely pleased with the radio and two of my
friends are currently pursuing purchase. The ability to monitor two
freq at once is extremely desirable as is the "lock on a blip" option
which enables one to check out who just came on and then return to
your exact operating freq. Admittedly, CW keying could be improved and
the AM filter could be changed, Other menu functions should be added
i.e. CW sidetone and compression should be metered.
Sensitivity of the LCD could be improved and additional options to
this visual aid added such as extending the 100 khz readout.

My IC 751 sits beside this 756 and there is no question that on the
higher freq. the 756 hears those the 751 will not!

I suspect Icom, always a leader , has established a new benchmark and
that other manufacturers will follow suit with the LCD visual aspect
of operation. I can no longer imagine the purchase of a radio that
does not have a front panel spectrum analyzer.

I trust these comments are helpful to the group...

>
> Thanks very much
>
> Carl N3QOM

Hi Carl,
I had a similar problem several months ago.
I wrote into the newsgroups and the folks who responded to my mail all pointed at either the PLL or VCO master oscillator. Many suggested I go with the 2PPM TCXO option. But the problem I was having was similar to yours; no so much freq. drift, but shift and the display remained stable.
What I wound up doing was pulling out the PCB with the master VCO oscillator. On that board there is a trimmer capacitor which I sprayed with contact cleaner and wiped it back and forth, first marking where the original position was. I later checked to see how far off I was from a calibrated frequency counter and readjusted the trimmer capacitor slightly.
Since then, I had no problems with freq. shift. I also work HF packet and PACTOR and needless to say, the problem I was having before rendered the xcvr useless.
I guess it was dust in the trimmer that threw off the capacitance from time to time.
Before you send your xcvr back to Yeasu, I would try this simple procedure.
I hope it works for you.
E-mail me if you have any other questions. 73,
Rich

6685. mfj986 ant tuner bugs

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-23 00:00:00 UTC
From: Joseph Fenn <jfenn@lava.net>
Message-ID: <Pine.BSI.3.95q.970623111409.16728E-100000@malasada.lava.net>
Source record: 172190

Seems I read some articles that the roller inductor in this ant tuner had a common problem with the roler inductor developing bad spots in the coil or roller contact which caused intermitent operation. I have used my "differential T Tuner" for about 8 months now and its beginning to be intmt. I set it up for a flat reading on a freqsy, then while operating on that freqcy it sometimes changes and the swr jumps up. Turning the roller inductor a turn or two in either direction usually flattens it out again (the swr that is). Some one have a fix for this?.

From: turner@safety.ics.uci.edu
Message-ID: <5omqi2$4q5@safety.ics.uci.edu>
Source record: 172191

The roller inductor in the 986 is the same as was installed in the 989. They are not real high quality, not real bad either. The solid core inductors were not real resistant to heat either.

A shot of DeOxit spray or similar contact cleaner every couple of months should cure the problem.

I cured the problem in mine by buying the new MFJ air core roller inductor. I think it was $60 and I had to drill two small screw holes, but it mounted easily. That is a better roller and has not had problems. The 989C comes standard with the air core roller, I am not sure if the 986 does yet.

When using STATE channels a clock source from the item being tested must be used to latch the states into the logic analyzer. PODS 0 & 1 are used for timing. PODS 2,3, & 4 are used for state measurements. There is one clock input on each POD designated "J, K, or L". Select which input will be used and configure the state clock for either a "high-to-low transition", "low-to-high transition", or any edge.

6694. IC-2000H power reduction ???

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-23 00:00:00 UTC
From: hershman <hershman@ix.netcom.com>
Message-ID: <33AF1BB7.36FC@ix.netcom.com>
Source record: 172199

Hi, I want to know the mod to reduce the power output on the Icom
IC-2000H fro 50 watts to something like 35 watts. I want the Heat sink
to stay cool and don't need the 50 watts out but can't live with the mid
range setting of 10 watts.

6695. FS: Diamond Discone

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-23 00:00:00 UTC
From: Brian Berkes <bberkes@erols.com>
Message-ID: <33AF484B.5EF2@erols.com>
Source record: 172200

For Sale

Diamond D130J Discone. Only Two months old. Like new condition. With Manual.
$55.00 Firm

The discone antenna is used by government and military agencies worldwide because of its wide bandwidth characteristics and non-directional coverage. Designed for use with wide-frequency coverage VHF/UHF scanners and receivers, the Diamond D130J discone consists of 16 rugged, stainless steel elements and is capable of transmitting up to 200 watts in the amateur 50, 144, 220, 432, 900, and 1200 MHz bands. As a receiving antenna, the D130J is omni-directional for continuous 25-1000 MHz (and above) coverage. A base-loaded, vertical top element is used as a low band (30-50 MHz) frequency extender. The elements are arranged on a 24-inch support pipe equipped with two strong mounting brackets to accomodate any standard mast-pipe (1"to 2-1/8" diameter).

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-23 00:00:00 UTC
From: Chris Schmidt <cschmidt@melab.me.pvamu.edu>
Message-ID: <33AF1F31.475A@melab.me.pvamu.edu>
Source record: 172201

I posted the letter about the HT-41, I also noticed another odd thing, whenever this the amplifier is inline with my transciever, I can barely hear anything, like somewhere in the amplifier there is not a good connection between the input and output, whenever I bypass the amplfier, I have normal recieve. Is there a reason for this? Perhaps a cure?

Thanks again,

Chris

6697. HELP! hallicrafters HT-41

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-23 00:00:00 UTC
From: Chris Schmidt <cschmidt@melab.me.pvamu.edu>
Message-ID: <33AF1E1F.CAC@melab.me.pvamu.edu>
Source record: 172202

I aquired a Hallicrafters HT-41 amplifier today, it is in good shape, but I have never had an amplifier like this and do not know exactly how to hook it up.

On the back, it has two pairs of terminals, one is labeled "Drive Level" and the other "Block Bias". I have since gotten the thing to key by shorting the two screws on the "Block Bias" terminal, but it was only putting out like 5-10 watts with like 2 watts drive. Maybe I need to hook something like a variable resistor up to the terminal labeled "Drive Level" and adjust the input sensitivity, I don' know, that is why I am posting here.

If anyone has any information on this amplifier, such as how to hook it up, Specifications, Output power, required input drive power, type of tubes used, etc... I would appreciate it if you will email me at cschmidt@me.pvamu.edu.

Thanks,

Chris

6699. Need Icom 735 Info

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-23 00:00:00 UTC
From: markem@primenet.com
Message-ID: <5onb9k$66g@nntp02.primenet.com>
Source record: 172204

I'm in the market for a small HF transceiver in the $500-750 price range for mostly (98%) fixed station use and maybe 1.99% portable, and maybe 0.01% mobile. I borrowed an Icom 735 from the club and really like it. I've about made up my mind that I want a 735 but I do have a few questions.

Were there different models of the 735? Is one, or a particular serial number range, better or more desirable?

Any common failure modes or things to look for when looking at one?

What modes are standard? SSB/CW I know, but how about FM? AM?

Standard filter complement? Are after market filters still available?

Any comments about the 735 in general?

Any suggestions for alternatives? How does it compare to, say, a Kenwood 440 or 450 or a Yaesu whatever?

Any input will be appreciated.

Thanks & 73... Mark AA7TA

6700. Heathkit CI-1080 (non-radio) info needed

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-23 00:00:00 UTC
From: Dale Luck <d.luck@ieee.org>
Message-ID: <33AF03A3.1C5D@ieee.org>
Source record: 172205
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap

I know this is not a Heathkit radio request, however there seem to be a lot of heathkit knowledgable people and someone might be able to help me with my old CI-1080 Heathkit exhaust gas analyzer.

The CI-1080 measures %CO. You stick the collector tube up the tailpipe.

calibration?
copy of manual?
use for anything else?
adjustment in front vs, balance adjustment in back?

Thanks in advance

Dale Luck

David Clark is top-shelf professional gear, and probably worth the
money, but the ARE spendy indeed.
You might look into using a less expensive aviation-type headset. The
Flightcom line is very reasonably priced (less than $90 for their entry
level model) if memory serves. Virtually all such gear aimed at general
aviation markets features noise cancelling mikes.

Please be aware that rec.radio.amateur.swap is a bogus
group, IE it has not been approved as one of the official
groups in the rec.radio hierarchy. For any group in the
usenet big 8, there is a formal group creation process
which should be followed to create a new group. This
process was not followed for this group. Therefore
most usenet admins will not create it on their servers
or handle any traffic for it. The authentic group for
buying, selling, or trading radio equipment is the
rec.radio.swap newsgroup. Please use that for all
your buying and selling.

I have a quantity of RF parts in excess of my personal needs.
Some items are available in large (>50) quantities.

Here's what I have and asking price:

ITEM PRICE
(each)

Johanson 8054 1.5 to 20 pf Capacitors $1.50
(Piston Style)

Piston Style 0.7 to 15 pf Capacitors $1.25

MCL TFM-150 Mixers $5.50
(LO/RF: 10-2000MHz, IF: DC-1000MHz, +10dBm LO)

MCL LPS-109 Power Dividers $2.50
(2 way, 0 degree, 10-500MHz)

MCL MAT-3 3dB Attenuators $1.25
(DC-1500MHz)

MCL MAT-9 9dB Attenuators $1.25
(DC-1500MHz)

AVANTEK VTO-8090 0.9 to 1.6 GHz Voltage $10.00
Controlled Oscillator, 50 ohm, +13dBm output,
TO-8 Case, with mounting hardware.

Cablewave Systems FXA 12-50 NM N Male $15.00
Coax Connector for 1/2" Hard Line
New, In the box!

Pictures and specifications (where available) on the above items may be found on my web page at:
http://members.tripod.com/~Sky_Writer

All parts are unused. Shipping is extra.

Communications Specialists sells several that will work for you, if you know the proper locations to hook up the encoder. CS advertises in several ham magazines, and I believe some of their products are sold by AES, and probably by most of the other ham dealers still in existence. The encoder will work, although you may have to set the level several times until you get it just right. Frequency can be set with the proper setting of dispswitches.

Hi Tom (and all) ...

You might consider hooking it up to the battery, thru a
relay which is energized by the "ACC" connector on the
fuseblock ... that way, the radio only receives power with
the "ACC" line is powered up, but the radio is run directly
from the battery ... the radio goes off when she shuts off
the car, and she doesn't need to remember to turn it off ...
best of both worlds! Bosch makes such a relay ... check your
local Checker Auto/Chief Auto/Pep Boys etc., and if not,
check with cellular phone installers ... they should all
have a 15-20 Amp relay, with a "flange" for mounting it to
firewall, and a (four-terminal) socket for it to make

quick-disconnect easy. All that (relay, socket and wiring harness) should not set you back more than ten bux or so.

Good luck, and very 73!

Rewire the MD-1 for an FT1000MP..... I don't think so. I haven't
rewired my MD-1 and can switch it between my FT1000MP and FT990 without
any problems. However, the UP/DOWN buttons on the MD-1 don't work with
the FT1000MP. Mmmmmm....

I have purchased the Icom software and PC cable. I paid $45.95 from HRO,
who now
is having a special, if you buy the rig they'll thrown in a copy of the
program and cable.
The program comes with no manual and there is very little "online" help.

I'm still looking for the programming specification, ie: data structure and
communication
method between the rig and the pc.

6731. Re: ? Crossband Repeater with DJ-560 ?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-23 00:00:00 UTC
From: watnny@aol.com
Message-ID: <19970623133201.JAA02692@ladder01.news.aol.com>
Source record: 172314

Short and to the point...The DJ-560 will NOT receive AM aircraft or cross band repeat,period! Had one for years..and sold it last swap. Maybe you are refering to the DJ-580..Mark N8REZ

Mark is absolutely correct !!! The DJ-560 will NOT crossband repeat, will NOT receive AM aircraft OR receive 800MHz !!! The mod IS for the DJ-580.

A buddy of mine tried this mod (from the exact same board) and cutting the red wire disabled his PTT !!! I called Alinco after this and talked to my favorite tech (the one who'll be straight up with you) and he told me that the 560 didn't have the internal compnents to do it. I then wrote to the administrator of the board and he was suppose to remove this mod from the list -- I guess he didn't !!!

From: cdorn@gpu.srv.ualberta.ca
Message-ID: <5okqnvgte1@pulp.ucs.ualberta.ca>
Source record: 172317

Hello,
I currently own a Kenwood 830S station for base use, and am satisfied with it. I am looking into the smaller, mobile HF market for a rig suitable for camping trips, etc.. Specifically I am looking to more mobile type rigs that are solid, but not loaded with bells and whistles. I haven't seen anything posted about the new Yaesu FT600. The review in QST looked ok, but is this rig "too basic" for hobby use? Is the FT840 a better choice in this price and feature range? What about the Icom 707? Interested to see if there are any FT600 owners who could comment. Any insight appreciated.

If the battery measures 3.3 volts D.C. Leave it alone...I've seen
them go for 15 years so far on a prototype 751. Changing it yourself
runs the risk of program corruption from static on the tip of your
soldering iron. Can't say I've ever heard on one going bad with out
someone messing with the ram board. Have seen more ram chips fail
than batteries.

I'm going to replace my 757 battery also. Could you tell me if you
detached the tabs from the cell, leaving the tabs soldered to the
board,
or did you need to desolder the tabs from the board also.

The idea of of that cell holder occured to me also. I came to the same
conclusion you did.

Dear Dave,

I have used one of the rigs for six weeks and have found it to be
much more than I expected for the price. The receiver is excellent,
compared to my FT-736, and puts out approximately eight watts.
I installed the cw option and it also is very good. I have worked
seventeen states thus far with a ham stick dipole only six feet high.
This is my first responce to equipment evaluation in forty years on
the air - its great to find a good buy and moderate price.

Hello all! I am a new ham (2 Yrs.) and hold a no-code technician license. I have passed my General theory exam, and am working on my code. My question is in reference to rf wattmeters. I see so many different models out there. I have heard that the BIRD is the standard for hams. I used to be into CB, and a friend owns a cb shop. I have seen him measure output on a cb with his DOSY and it show nearly 10 watts, then measure the same radio on a bird and it shows 4.5. How do you know if the meter you are using is accurate? What is the method of calibration?

Hello to all, and thanks for reading.

I desperately need ANY information whatsoever concerning a remote tuned HF Amplifier, Model CL-36, made by a company called Communications Associates Inc.. The mfg. used "CAI" as their logo and were located in Huntington Station, New York.

The amplifier is a remote tuned, single 8877 and I believe it was built for Maritime Service.

I need a manual/schematic or ANY information whatsoever about the manufacturer or the amplifier. Any lead will be greatly appreciated.

Thanks and 73, Sam--K8WVA--

6747. Re: More TS440S problems

On 2 May 1997, it was written:

> I have had two 440S's with the frequency problem. Sent both to AES
> repair department for repair (PLL board goo0, and have had no problems
> since. The 440S is a great radio, and there's no good reason for having
> one collect dust because of the PLL board glitch.
>
>

I have a TS-440S/AT and have had a problem with the panel light blinking. Bad Solder joint. Also, the VFO knob stiffening up with no action. A simple act of lubricating. Otherwise, I LOVE this radio. I even modified it for extended range on TX/RX and have had NO other problems.
While a lemon is possible, it shouldn't be a factor in judging all TS-440S radios by.

I would recommend the TS-440S, but I will say the AT (Antenna Tuner), wasn't really worth the money. An external antenna tuner does a better job, for equal or less money if you aren't too lazy to turn a couple knobs instead of pushing a button. It works, but not as well as an external tuner. The AT won't do 160 meters anyhow, if you plan on using that band.

Lou

6749. New Programming Info For Motorola MCX 100

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-23 00:00:00 UTC
From: Dave Burniston <davidgb@nortel.ca>
Message-ID: <33AEB7F9.7216@nortel.ca>
Source record: 172332

Hi,

I've received a Motorola MCX 100 with 32 memory PROM. I want to change the programmed frequencies to match my local repeaters (it currently uses repeater frequencies from another area). I have the equipment to program a new PROM but need to know how to generate the appropriate data.

Anyone have this info and could e-mail it to me?

Thanks,

... Dave

I don't know about the 751, but what you describe IS exactly the case for the Icom R71 receiver. There is no ROM. The program is stored in RAM along with the memory channels and it's all maintained by the battery. If the battery goes dead you loose the entire processor program! The only solution then is to send the receiver (or at least the memory module) back to ICOM for reprogamming. You could jumper a temporary battery into the circuit to hold the memory while you replace the battery. In the R71, the battery is soldered to the circuit board and the board is burried below another board and a shield. Replacement is not an easy task. I guess the object of this design was job security for Icom techs.

I've had real good luck with a Larsen 270 dual band. You can mount it on
a bracket off the tire carrier like a buddy of mine has. Works just
fine..Optimim would be in the center of the vehicle though..that's it

Source record: 172087

This is a tough one. I spent hours debating the virtues of both rigs, I've compared them side by side with my present radio (a TS 850), and I've asked my friends and some of the most avid dxers their opinions on this very question. I also spoke with the Yaesu reps at ham conventions. Here are my findings and the views of those mentioned above. I was primarily interested in comparing receivers because I wanted the BEST receiver available. In terms of basic receiver performance, I think the 1000D is quieter. By "basic" performance I mean without DSP. The 1000MP with the DSP on did appear to be quieter under some conditions, but not all condx. Some guys like DSP (its "tonality", etc.), but I'm not a huge fan of processed sound. The D offers other impressive features not included in the MP, like 200 watts output (good if your amp requires more than 100 watts drive, or if you don't want an amp), and dual band receive, which may be good if you're a contester. On the other hand, to get these features the D weighs in at considerably more pounds, making it difficult for dxpeditions or any portable use. The D is built like a tank, good solid transformer and power supply and seems like a more rugged rig (although I'm sure the MP will hold up extremely well). But if you don't need the power, maybe you don't need to pay for it either. The VK0IR team used MPs, and according to WWDXA club member N6MZ, one of the team members, they loved 'em. I also asked why John, ON4UN, one of the world's most renowned hams and author of the book "Low Band DXing", why he switched to the MP after using the D for years. He said he found the receiver to be quieter and easier to listen to on the low bands, especially after long hours of contesting. He also liked the portability of the MP compared to the rock that the D is. On the other hand, I also had the opportunity to ask Martii Laing, OH2BH, famous dxpeditioner which rig he prefers. He has both the MP and the D in his home station in Finland. He swears by the D for the reasons above and suggested that the D is better on cw, and has better blocking dynamic range. The Yaesu reps said they thought the MP was a better receiver because of its DSP versatility, but otherwise they had the same basic receiver performance. Confusing...? You betcha. What all this indicated to me was that they were both first rate and one just had to decide what features you wanted: DSP, 200 watts, portability, cross band rcv. So I was able to compare each one to the TS 850, thanks to my friends K7XS and N6NR. What I found was quite surprising. In both cases, to my ear, the TS 850 had a "hotter" receiver (more sensitive) and was able to block adjacent strong signals better (using similar filters)! Both of my buddies, who owned the other rigs, also agreed! Now remember, I was only interested in the receivers. The MP and the D both have many other features that the 850 does not have. But my amp doesn't need more than 100 watts drive and I've worked 315 countries never using dual receive or crossband receive. So I purchased an outboard DSP filter and am as happy as a clam with the 850 (and saved myself

thousands of dollars). The bottom line to your question is figure out what features you want and go with that. Both the MP and the D are superb. By the way, Rick, N6NR, added a Timewave 599 DSP to his D and he figures he's got a 1000DMP! It sounded REAL good to my ears too. Best 73s, John, K7JY.

Like new FT-757 and AT-757 tuner...original everything including service manuals. $675.00 for the pair. Never mobile.

FT-902 DM - 8/10 new finals, not used since Yaesu realigned in early 96. $450.00 in original packing with manuals and hand mike.

Hy-Gain HT-18, also like new...Pick up only in Washington state. $500.00

Dentron 3000-A Tuner with manual $200.00....yep, easily handles the legal limit.

Heath SB-1000 with spare 3-500 and all manuals. $650.00

Thanks for reading.

For Sale:

Three Zenith "TransOceanic" transistor radios and two other Zenith radios.

These come from my dad (WB0SUJ) , who passed away this spring. He was a lifelong Zenith Radio & TV dealer in Rolla, MO.

The radios are:
Model Royal 3000-1, Chassis 12KT43Z8. The audio seems to work but the reception is very weak. This unit has seen some wear and tear and needs dial lights. There is no built in AC supply, uses 9 "D" Cells.

Model Royal D7000Y. This one seems to works fine from AC or Batteries, but needs some new light bulbs. Normal wear and tear.

Model R7000. Chassis 2WKR70. This unit has a problem with the tuning mechanism so it doesn't have reception, but the audio is fine (we can hear static). AC or batteries. It was made in Taiwan and is labeled as factory reconditioned.

We also have a Royal 755 AM only unit which has a short or fault and doesn't work at all. The radio is well used, but in pretty good physical shape. The leather case is intact and in good condition

The last is a "Circle of Sound" AM/FM radio from the 60's. My husband still has it in his office and uses it often. Works perfectly but a bit dusty.

We will consider reasonable offers for any or all of these radios and will add shipping and insurance to the price. We are not dealers and the radios will be sold "as is".

The best way to respond is by email to

BarbS223@aol.com.

Thanks
Barb Stanley

6768. Part Id? MA132WK (sot23) diode

Newsgroup: rec.radio.amateur.equipment

It is possible for one diode in the alternator to bad and still have
enough output to keep the battery charged under normal conditions. With
a diode out, the ripple frequency is lower and noise tends to get into
the electrical system. When I had the problem, I noticed whine in the FM
car radio as well as the ham rig receive and transmit. Turning on the
headlights (increased load) tends to cause an increase in whine.

Hello -

Looking for manual or copy for Motorola (manufactured
by Measurements Corp) RF Signal Generator model
S-1320. This generator is the transistorized version
which resembles the older tube model T-1034. The
sig gen would be usually used in the commercial
two way radio trade.

Will pay any and all costs for copying, or will copy
and return at your pleasure. Please check your file
cabinets, and help me get my swap meet treasure
back on the air!

Thanks for reading this.

Check the Sporty's Catalog (1-800-LIFTOFF, I think). David Clark
headsets are expensive because they're also designed to protect your
hearing in high noise environments. If hearing protection is not as
much an issue as getting the message through, you may want to look at
some of the lighter weight headsets. Most, if not all, will have
noise canceling mics.

6774. Re: FT-8000 Audio question...

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-24 00:00:00 UTC
From: David Ho <davidho@one.net>
Message-ID: <Pine.LNX.3.95.970624094424.27572A-100000@shell.one.net>
Source record: 172138

I use my FT-8000R at home as a "base station". The sub-band (the right hand side) has lower sensitivity also, but only when operating in V-V or U-U mode. I believe this is not a problem because it is documented in the user guide. Unfortunately, I don't have the book with me right now, so I really cannot tell you from what page will you be able find the statement.

In addition, I don't find anything in particular regarding to your unbalanced audio output. It is a difficult thing to tell unless you have equipment to measure the output. Also, you might want to factor in things such as: listening environment (echo and stuff), physical position of the speakers and you (as you might have seen in an acoustic lab), and the quality of the external speaker (no 2 speakers do the exact same thing), and etc.

Since the main and sub bands are controlled by seperate volumn controls. I find that the easiest compromise for me is to adjust these knobs. After all, the FT-8000R is a dualband radio from which you can monitor 2 seperate frequencies at the same time. It's kind of defeating the purpose to use both of them to listen to the same frequency at one time (not that you are not allowed, hi hi).

I find my FT-8000R does exactly what I want it to do, although it doesn't quite live up to what it claims on the receiver side (e.g. need hearing aid on 220MHz and 800MHz, etc). Nevertheless, I did use it to monitor the Concord's arrival and departure of the Greater Cincinnati International Airport.

Best 73!

I purchased one 97/06/23 so I am fairly new to the radio, and it is my
first radio. I am finding it pretty simple to use so far as basic
functionality goes. I was able to get on the simplex frequency right away,
and on to the club repeater a few minutes later. For some of the more
advanced functions I have had to read the manual several times, but I think
this may be my inexperience more than anything else. My only concern is
that, initially anyway, there seem to be more functions than there are
programmable function keys. However, I think that as I gain experience and
learn what is really needed, versus what I think I might need, the issue
will resolve itself.

All in all, I am pleased with my purchase decision.

Hello...

We're attempting to sell off an extensive stockpile of NOS and used vacuum tubes which has been accumulating since the mid-1930's.

The collection was amassed by a radio enthusiast who, having received certification as a radio techician in his teens, served as a radar tech during WWII, worked for Westinghouse post-war, owned a radio shop during the 50's and 60's, and currently restores vintage radios.

This inventory, of over 800 tube types, includes many rare pieces, all at VERY fair prices. To request a partial stock list, which includes Sweep Tubes and others used in Transmitters, Linear Amps, Audio Equipment, etc. please email:

locoprom@adan.kingston.net

Please DO NOT quote this article in your reply.

Thanks for your interest!

6781. Dual band antenna selection for a Jeep?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-24 00:00:00 UTC
From: Willie Peloquin <wpeloqui@ismi.net>
Message-ID: <01bc80ae$bfcd5120$dbb46478@bigdog>
Source record: 172145

Hi,

I just purchased a Jeep Wrangler, soft top. I am trying to make a decision on the type of antenna to purchase. I would like a dual band, 2m & 70cm, that would look attractive on the jeep. I do not know too much about antenna theory, so I thought that I would ask the experts! I don't really want to go with a glass mount. I have seen CB antennas mounted to a bracket used as a stop for the rear tire. Possibly a rear quarter panel mounted whip. What would be the optimal location, better yet, is there an on-line resource that would help educate me on ground planes, and antennas?

Thanks a bunch,

>are using is accurate? What is the method of calibration?

Rick, the Bird has been the industry standard power meter of the two way industry for many years. Full scale tolerance is typically 3%, IE for a 100 watt reading with a 100 watt slug, the error could be as much as +/- 1.5 watts. But if you're measuring 10 watts with a 10 watt slug, the error would only be +/- 0.15 watt. So it is important to use a slug with the correct range for the power you are measuring if you want good accuracy.

The meter movement and the line section inside the meter housing work over a very wide frequency range, but the slugs are calibrated for particular frequency ranges. You must use a slug designed for the frequency range you are measuring. If you use a slug for VHF to measure a UHF signal, the reading will be high, and vice versa. This is Ok for relative readings, but you'd need to recalibrate the slug to the correct frequency range to get an accurate reading.

Bird slugs can be calibrated against a calorimetric water load. That measures the temperature difference between inlet and outlet for the cooling water. That temperature reading coupled with the known water flow rate will give you the amount of power being absorbed by the load. The Bird slug is then adjusted to match that value.

Now the CB service shop may be using a peak reading meter rather than an average reading meter. The standard Bird 43 meter reads average output power. That's perfect for FM, but it won't measure SSB PEP power. Bird makes a different peak reading meter which can do that.

>more on some models.

You should be aware that the Japanese version of the radio uses a different
CPU. It only covers the 144-146 MHz segment of 2m, and none of the mods
to expand coverage will work. This is due to Japanese regulations.

Hmmm. It may---my FT-530 required the filtered cig lighter cord, but my
FT-8000, connected directly to the battery, of course, didn't need any
additional filtering.

> my problem here??? Any ideas?

Just because your muffler is still hanging on doesn't mean it has a good
electrical ground to the frame. Many systems use a non-metallic
coupling gasket between the downpipe and manifold. Of course if the
system is old enough perhaps every joint in it may be rusted to the
point where it becomes an insulator rather than conductor. Might be
worth a try to install a new hanger, and while you're under there run a
ground strap from the hanger to the frame and check those joints.

I've had no ignition or alternator noise from my 8000 in the two months
I've had it. :) Nice radio.

> squelch when the right side is...

If I recall correctly, the manual states somewhere that each side's receiver is optimized for that band, and any signal outside the band for which it's optimized will appear to have a lower signal strength. The left side is optimized for 2M, the right for 440. A 440 signal on the left side is well outside the 2M band, and therefore will have a lower signal strength reading on the left side. Try receiving a 2M signal on the right side and you'll notice similar results. In addition, the 860 MHz signal from my local PD that is full quieting on my scanner barely comes in on the FT-8000 due to the passband being tuned for amateur bands and narrow bandwidth of the antenna.

>
> Anyone have any input on this problem??? Send it back to Yaesu???

It's not a problem so much as a fact of life with wide-band receivers. Great radio.

I don't think that's it. The Japanese web page shows the recommended
retail price with retailer margins included. And the Japanese retail
chain is world famously inefficient and non-competitive.

I'd put the difference down to import duty, freight and the added
cost of a separate US subsidiary which will have a significant
overhead to stock parts, provide warranty service, perform FCC Part
15 compliance certification. And then finaally add the manace of US
business and product liability insurance.

Yup, saving those $230 will get you a crippled rig with no warranty
and no resale value. What a bargain!

I have a quantity of NEW RG-11 72 ohm coaxial cable in 100 foot rolls. This is a super premium quality cable made by General Instruments. Ideal for making phasing lines on stacked or phased antennas, feedlines, or etc etc etc.

Price is $25 per roll PREPAID by UPS in USA. Great bargain on great coax.

YOU are apparently attempting to use that amp with a transceiver - but it
was DESIGNED to be used with a separate transmitter and receiver, and
with the use of a transfer relay. To use it with a transceiver, you must
rig up some sort of transfer relay system to switch the amp in and out of
the feedline when going from transmit to receive.

I agree with you %100! It's a problem for me too. I bought my unit in February and noticed the problem only recently, since I use mostly 2M. When I drive in my car I can't make contacts on 73cm because of this (audio is too low - car/wind noise too high), and I don't want to fiddle around with external speakers, because the 2M sounds really fine.

To add to this, 2 weeks ago I lost ALL audio to my radio when I transmit. I would still get the signal on the S meter, but no audio comes out completely. No squelch no beeping tones, nothing!!!
Turning the unit off/on doesn't help! I let the unit sit over night, turn it on and the audio is back, great! I press transmit for 1 second, and that's that, the audio is completely gone...

I had made no modifications to the radio whatsoever, and reset the microprocessor twice to try to fix this, but to no avail. The unit is now sitting at Yaesu (Thanks to HRO for making the pass)

When I put it for repair, I stressed these TWO DISTINCT problems in my opinion and would like to hear Yaesu's response.

I will try to remember to post the outcome on this newgroup, or you can ping me in 3 weeks from now.

6799. 1000D or 1000MP?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-24 00:00:00 UTC
From: JCCR <jccr@jccr.com>
Message-ID: <5op85j$1l3$1@news.netusa.net>
Source record: 172163

I know this one's been beaten to death, but I didn't get to catch the opinions. I want to pick up a new 1000MP or 1000D. By the time you fill up the MP with all the filters it costs as much as the 1000D. Is it better to get the 1000D and buy an external DSP? Does the older technology of the 1000D make the 1000MP a better choice? I want a great rig, it's gonna be one or the other. Opinions on 1000D vs 1000MP please?

Thanks! de Jim KS1A

6800. FORSALE - Immaculate Kenwood TS-520, great starter rig

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-24 00:00:00 UTC
From: jpl@qc10.ho.lucent.com
Message-ID: <5op7f0$7an@nntpa.cb.lucent.com>
Source record: 172164
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

I have a virtually immaculate Kenwoods TS-520 rig that I would like to sell.
This was my first "real radio and in my opintion is still
one of the best rigs around. It would make a fantastic beginner
station or a great backup rig.

I am only the second owner of the rig.
I purchased it from a collegue of mine at Bell Labs (who
was the original owner), and I have the orignal sales receipt,
boxes, and manual for it. Both he and I took
exceptionally good care of this rig. It has NEVER been in a smoking
environment and has NEVER been mobiled.

For any novices not familiar with this radio, it is all solid state
(discrete components, so its very easy to repair if ever needed)
except for a tube driver and a pair of very
robust 6146 tubes as the finals. It has a builit in power supply,
but can also run off of 12VDC.
It covers 80,40,20,15, and 10 meters in CW and SSB (upper and lower) modes.
The receiver section is excellent and I always get excellent audio quality
reports. Many folks say that these older Kenwoods are some of the best
sounding rigs on the air.

This rig also has the optional 500Hz CW filter installed
(genuine Kenwood option).

The price is $300 firm + shipping. You might find one for a few $ less,
but NOT is this great condition.

Source record: 172168

Hi Pete,

I too had the alternator whine. Also noticed the Ft-8000 was very susceptible to electrical noise. I've learned to live with the electrical noise but the alternator whine had to go. It was on receive and transmit. I found a relatively easy cure, works most of the time. Radio Shack has a HEAVY DUTY noise filter for $19.99 P/N 270-055.
Best wishes,

Vic

I have the following pieces of 7/8" hardline coax for sale. All was in service and use until it was recently removed. No connectors, they were all removed to facilitate removal from towers and buildings. Almost all of the coax is Andrews LDF-50. Price is $1.25 per foot on runs less than 100 feet, $1 per foot if over 100 feet. Shipment will be made motor freight collect. If possible, shipment will be made by Watkins Motor Freight that is offering a 50% discount to areas that they service.

#1 120 feet #2 50 feet #3 48 feet #4 110 feet #5 80 feet #6 70 '

#7 65 feet #8 48 feet #9 80 feet #10 60 feet #11 90 feet #12-40'

#13 200 feet #14 180 feet #15 140 feet

All lengths are approximate.

I will also have a large amount of 1/2" hardline later this week.

Thanks anyway I have access to the real ones. As the sign in the cowboy cafe says, "Our cow died so we don't need your bull." BTW from what I hear your last "706 mods" were indeed incorrect and did do damage.

Jerry

My next-door neighbor had an alternator go out, and the dealer wanted
$175 for a replacement. Autozone said $65, and an alternator repair

place replaced the regulator and charged him $25.

6818. IC751 memory loss?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-24 00:00:00 UTC
From: Joseph Fenn <jfenn@lava.net>
Message-ID: <Pine.BSI.3.95q.970624145435.24136D-100000@malasada.lava.net>
Source record: 172182

I remember when first bought my IC751 years ago there was a lot of conjecture that if the lithium backup cell ever failed, the whole operating system would be lost??? That dont sound reasonable to me now or back at the time when I first heard it mentioned. Loss of all the 32 memory channels (if you have anything stored in them) yes I can understand. Loss of the entire program (i/e the VCO control etc) I doubt it. Would anybody care to comment on this. My lithium must be about 10 years old already so if I loose the freqcys in the memory channels, thats no big thing.

Source record: 172215

Hi,

I am looking to purchase some audio editing software to use on my home PC. I am presently hosting a radio program and I want to edit liners, cut commercials, and other simple editing tasks from my home. I have a limited budget. I understand that there is software out there ready to install that will convert most pentium level PC's into 2 or 4 track record/editer providing you have enough Harddrive and RAM. Is there software that is capable of taking an off the shelf PC, using a sound blaster card, to edit in a low price range that you are are aware of? Any help would greatly be appreciated.

out there. I have heard that the BIRD is the standard for hams. I used
>to be into CB, and a friend owns a cb shop. I have seen him measure
>output on a cb with his DOSY and it show nearly 10 watts, then measure
the
>same radio on a bird and it shows 4.5. How do you know if the meter you
>are using is accurate? What is the method of calibration?
>

Hi Rick, I know that Bird (and Bird type slugs) can be calibrated
although I don't know how they do it. I am not familiar with the other
type meter your friend uses, but the Bird is almost an industry standard.
I have a Struthers meter which is basically a military version of the
Bird43. It uses the Bird slugs and seems to be quite accurate. If it
were me, and a Bird shows 4.5 watts, and another meter showed 10, I would
tend to believe the Bird meter, unless there was some sort of Lab
calibration on the other meter.

6823. FT-8000 Audio question...

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-24 00:00:00 UTC
From: Peter and Colleen McGreevy <PMCGREEV@MAIL.IDT.NET>
Message-ID: <33AF78B0.3CE7@MAIL.IDT.NET>
Source record: 172219

My FT-8000 has louder receive audio and higher signal strength on the "left" side, as it has on the "right" side. What I am saying is, the 440 side has lower output audio than the 2Meter side....

Also -- WHen I set the radio to receive 440 on BOTH sides, same exact frequency, the right side is still lower, and, get this, the signal strength is lower onthe left side by 3 s units or so, not just lower on the s-meter, but actually lower, as in, the left side won't break the squelch when the right side is...

Anyone have any input on this problem??? Send it back to Yaesu???

Thanx -- Pete -- KA2YDY

6824. FT-8000 Alternator Noise question...

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-24 00:00:00 UTC
From: Peter and Colleen McGreevy <PMCGREEV@MAIL.IDT.NET>
Message-ID: <33AF77F3.7152@MAIL.IDT.NET>
Source record: 172220

Question...

I have a Yaesu FT-8000, and need a few answers:
1-Does the radio have any built in "alternator noise" filters, to stop alternator whine from getting out on transmit?

2-(this is a longer one... :) --- I have my 8000 in the car, have had it there for 6 months or so, no problems... Then, suddenly... alternator noise on transmit... Now, I think the radio got hot for a while, summer, poor ventilation, etc... so I was wondering if any possible alternmator noise reduction circuitry in it might have fried itself... Also, at around the time the noise began, my muffler started dangling (strap broke....) Now, I thought the muffler might have something to do with it, loss of any grounding to the muffler I thought, but then I rethought it and said "what grounding"... the muffler is connected to the engile, but then the part that broke off was only a rubber strap/support, which could not be offering it any additional grounding... Soooooo..... What's my problem here??? Any ideas?

I have another question on the radio, but that will be in another posting

Thanx -- Pete -- KA2YDY

I, too, have sporatically had the 986 "jumps" as well but the biggest problem I found was the mechanical connection at the knob end of the roller. I had to re-solder (silver) that end of the coil twice.

I was recently given an old HW-22A and HP-13 dc supply. I would get a kick out of installing these in my old work truck, but I don't have the required power supply cable. Does anyone have one of these floating around that they would like to part with or any idea on where to locate these plugs to build my own? Any ideas on modifying this equipment for readily available plugs. Any info would be appreciated.

Larry,

Mine has worked very well in over a year. Occationally, it will not tune on a band. I then have to go tune on another band and go back to the band I really want to tune up on. It may just be a quirk of my particualr setup.

Otherwise, it has worked perfectly well.

From: "Joe Giacobello, K2XX" <k2xx@concentric.net>
Message-ID: <33B1E8CC.3E73@concentric.net>
Source record: 171983

I have been using panel mounted RF Ammeters and a 50 ohm dummy load to measure HF output power. Those meters, which are usually available at hamfests for under $10, are quite reliable if properly mounted.

I often compared the readings vs the directional wattmeter in a Collins 312B4, and they were generally within + or - 2-3% of each other.

You may need at least two meters to measure both low (100 watts = ~1.4 A) and high power (1500 watts = ~5.5 A).

True. I want to mention, however, if you don't mind giving up
the ability to put good crystal filters in both IF's, with multiple
choices. Then you can add an outboard audio DSP....that is the peak
of the TS-450. The 570 allows one added IF filter for CW,
no other choices. They have one stock SSB crystal filter in
the 8.8 MHz IF. That's it. Then they depend on audio DSP. The
audio DSP is NOT in the AGC loop. It is no better than an
outboard DSP in theory.

Now, the 570 is a nice little radio. There are tradeoffs made,
maybe especially for the CW operator, in the ability to work the
IF chain with crystal filters. I suggest you try each radio
fully equipped to see which one you like best. Each is great
in its own way.

I have been pretty happy with my Yaesu FT-8500 (with MH-39 mic), which meets all the above, except cost (mine was $585 new). See http://www.yaesu.com/ft8500.html

It has alphanumeric 6 character displays for each band along with the freq display, which is a great benefit for my confused recollection of which repeater is which, especially if you program in a bunch of 'em.

I get (unsolicited) good reports on my output signal and audio quality. No difficulty with intermod.

It has huge array of functions and features, but is still quite small and rugged.

Cross banding works great.

Negatives:

You will have to buy a separate kit for remoting the front panel. likewise, CTCSS decoding needs optional daughter card.

Audio from internal speaker is wimpy, and has annoying background noise at steady low level which becomes irritating when using a remote speaker or headphones. This may have been fixed in later units (mine was new 3/96). Yaesu knows about this problem.

Seems to have some circuit fault (appearing after the unit reached 9 months of use) which causes the radio to lose its current settings whenever powered off - vol, memory selection, squelch - although not the programmed memories. Yaesu says this is impossible, others on the net say it is...

Plan to send mine back for a fix soon, but it has been a nice rig.

You might look at this one or the FT-8000 which has most of the features, less the detachable front panel and the A/N display, but offers the receive range of a scanner for less money than the FT-8500.

This is the only mobile I have owned, having bought it after my FT-51 HT (which is delightful), so use appropriate seasoning.

regards,

Jerry Cupples

6844. Subjective Quickie/First Look at Yaesu VX-1R.

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-25 00:00:00 UTC
From: miker <mreiney@hevanet.com>
Message-ID: <33B1FB26.7EF4@hevanet.com>
Source record: 171990

Subjective Quickie/First Look at Yaesu VX-1R.
Warning, there is not a shred of real measurement data to =

back up my assertions. They are subjective.

I have a Standard C508A. I need a little more power to reach my
favorite =

440 repeater. I need touchtones to turn on/off my repeater. So I
sauntered =

down to HRO and the nice people let me play with a VX-1R

It sure is cute and tiny. I read the manual cover to cover.
The first thing I tried was to measure the battery voltage.
After some fiddling and rereading, I got a voltage reading. =

I also got the thing locked up. I got it turned off, but it =

wouldn=92t turn back on. Finally figured out the magic key =

sequence for soft reset and got it back on. Not a good sign. =

Operator error or no, it shouldn=92t lock up...and not on the first thing=

I tried.

I took a field strength meter with me. At 3 feet, there was measurably =

more output from the VX-1R than from the C508A. No, I don=92t need a =

lecture about the worthlessness of near-field measurements. I told you
it was subjective.

My favorite repeater is at the fringe of the C508A=92s range. =

Unfortunately, the VX-1R did no better. It may have even been worse. =

Big disappointment. This test done with another ham on the other end of
town.

I also talked on one radio while listening on the other at arms =

length to try to find a hot spot. The VX-1R seemed to desense more than
the Standard.

In addition to DTMF dialer memories, the VX-1R has a crude =

=93turn the wheel on the fly=94 method of entering tones. =

I tried to control my repeater. The first tone sequence =

seemed to come out, but I couldn=92t get it to do a second =

sequence. I managed to get it reset to do another sequence, =

then won=92t enter the mode again. I don=92t know what I did, but =

I couldn=92t figure out how to get successive sequences of tones out of
the unit.
It didn=92t matter because my repeater didn=92t accept them anyway. =

I assume it was just too little power.

By the time I charged the battery for a while, then unplugged the
charger, =

the internal meter read 5.8V. I thought Lithium Ion batteries were
supposed =

to top out at 4.3V or so fully charged. Not sure what this means.
Self-discharge rate of Lithium ion is much lower than NiCd, so that
feature may be a plus if you don't use the radio much.

Nobody could tell me the price of the replacement battery.
My money is on =93big bucks=94. If a normal radio pack costs $50 and Li-=
Ion
batteries cost 3x NiCd, a little math tells you "OUCH". There may not
be
any short-term competition from Mr. Nicad et.al.

The Alkaline adapter doesn=92t look like it will be useful. =

100mw out, very short life, emergency transmit only. There were more
disclaimers =

in the manual than in my car insurance policy. The adapter has a
voltage =

doubler in it. Don=92t expect it to be $20 like the typical alkaline
case.

There=92s a =93personal alarm=94 feature that emits a loud noise when you=
push =

the panic button. That sure cleared out the store. Too bad I hadn=92t =

figured out how to turn it off before I accidentally got it turned on.

The power switch was very hard to push. That=92s good if you=92re afraid=
=

of it being turned off in your pocket. I think they carried it too
far. =

There=92s no indication that you=92ve pushed it and nothing happens for t=
wo =

seconds. I had to push so hard that I was afraid of breaking the
switch. =

If it=92s locked up and won=92t turn on, how do you know when to stop
pushing harder?
If you have arthritis, you may not get it turned on.

The marketing hype touts the wide range receive from 500khz. to 999
Mhz. =

I don=92t remember any mention of the hole between 1.7 Mhz. and 76 Mhz. =

That=92s a pretty big hole as far as amateur frequencies are concerned. =

The manual stresses that with the small antenna you won=92t be able to
hear =

AM broadcast unless you=92re practically standing on the transmitter
site. =

At that point, you can hear the station on your dental fillings anyway. =

I hope they didn=92t sacrifice any size or battery drain to add a deaf AM=

radio. =

I would have opted for 6-meter FM.

There=92s another hole in the uhf range somewhere, I forget exactly
where. =

It=92s also Cell-Blocked.

There are scads of features I didn=92t attempt. My interest waned when I=
=

found the RF performance no better than my Standard. By the second time =

I locked up the display, I was clutching my wallet very tightly.

A radio doesn=92t do you any good if you don=92t have it with you. The
VX-1A =

(or the Standard) is so small that you can stick it in your shirt pocket =

and still have room for your pocket-protector and slide rule....oops,
wrong decade....
but you get the point.

It looks like I=92m against the radio. Not so! I almost bought the thin=
g =

anyway, just =91cause it=92s cute. I just have a knack for finding holes=
in =

user interfaces. It doesn=92t do any good to report on things that worke=
d =

like the manual said.

If you want a small radio and don=92t have one, it may be a good one. =

Suggest you insist on playing with it at length before you buy. =

Might also be a good idea to wait until someone can quote price =

and delivery on accessories. That lithium-ion battery may turn =

out to be a nasty surprise.

For now, I think I=92ll keep my C508A.

While I=92ve got your attention, the C508A is not without it=92s =

faults. With NiCd batteries, transmit performance sucks.
Mine measures 60mW at 2.4V. That=92s why I thought the =

VX-1A would be a lot better.
The Standard rep disavows any knowledge of this very low output on
NiCd's.
I got a lot of double-talk relating to similar measurements at 3-volts, =

but never a clear statement on 2.4V performance.
I'm interested to know if mine is the only one with this problem.

Will trade Johnson KW Matchbox with SWR unit and manual.
It has been in storage since the mid-80's.

CONDITION:
Electrical VG
Mechanical VG
Appearance G

There is some paint wear, panel lettering fine, plastic face
on panel meter shows some hazing. No dents.

Want a Yeasu FRG-7 or FT-757 in VG condition. Other SS HF TVR
operating on 12Vdc considered. Eyeball trade preferred.

Will sell Matchbox for $250 + shipping (firm). No COD's.

Please reply by email to avatar@frii.com

6846. How to replace the battery

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-25 00:00:00 UTC
From: KG8EY <mhaunschild@fwb.gulf.net>
Message-ID: <33B1619E.2261@fwb.gulf.net>
Source record: 171992

Joseph Fenn wrote:

Joe, 'tis true. The microprocessor's program in the 751 (and others)
lives in a CMOS RAM, not a PROM.

The following is a procedure that I wrote to document my knowledge of
this "feature". This worked for me; your mileage may vary.

Before you try this, I would be interested to know what your battery
voltage is now, after ten years. Mine was only five years old and had
decayed to 3.25 volts, which is still a safe level. But, I replaced it
anyway.

73

Mahlon - KG8EY

Draft Modification: Replacing the Battery in the ICOM IC-R71A, IC-745,
IC-751, IC-751A, IC-271,
IC-471, IC-571, and IC-1271

The Problem: These radios, which were all designed for different
purposes, all share the
same logic board design. In this design, the program for the radio's
microprocessor is
stored in the CMOS RAM, which is backed up with a lithium battery when
the radio is off.

Over time, as the voltage in the battery decreases, it eventually falls below the threshold
needed for the CMOS RAM to retain its data. When this happens, the program for the
microprocessor is erased, the radio no longer operates and it must be returned to
ICOM for replacement of the battery and reprogramming of the CMOS RAM.

The Solution: Replace the battery while applying 5 volts to the RAM.

What you will need:

- a 5 volt logic power supply of some sort.
- a new lithium battery. The Panasonic part number for this is BR2325, and it should have
PC-board solder terminals welded to it (the kind that cause the battery to lay flat against
the board, not stand up). Do NOT attempt to solder wire to one of these batteries; get one
with the correct terminals welded on, or DO NOT attempt this mod.
- Soldering iron, solder wick, solder, wire, etc. I used a Weller WP25 iron with the tip
grounded through a 1.5 megohm resistor.
- A non-conductive work surface.

How to do it:

1. Remove the top cover of the radio.

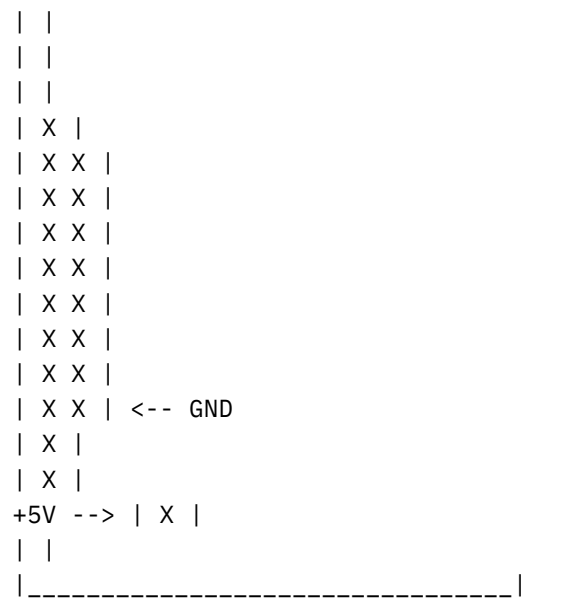
2. Those of you that have PS-35 internal power supplies will need to remove the plate on the
rear panel holding the AC socket and fuse in order to free up the AC and DC cables coming from
the power supply, which is fastened to the bottom cover. Once the plate is removed, unplug the
AC and DC power cables from the plate and prepare to thread them through the radio when you
remove the bottom cover. Do this VERY carefully, as quite a number of VERY SMALL wires run
through this area and you can easily break one of them if you aren't careful.

3. Remove the bottom cover. PS-35 owners: CAREFULLY thread the AC and DC power cables through
the hole as you remove the cover (with PS-30 attached).

4. Examine the inside of the bottom of the radio and find the RAM board on the logic board.
The RAM board is a small (approx. 2" by 2") square PC board with the offending lithium
coin-cell battery and a couple of ICs mounted on it. It's held in place with a single small
Phillips screw. Remove the screw and gently pull the RAM board off of

the logic board.

5. Place the board, component side up, on your non-conducting work surface. It should have two connectors, a 12-pin one and an 8-pin one. Orient the board so that the 12-pin connector is on your left. Confirm the location of the +5V and ground pins on the board. These boards probably come in various configurations, but all should have the same pinout. To use as a reference, the positive side of the battery (top side) will be connected to the +5V pin through a diode, and the negative side of the battery (bottom side) will be connected directly to the ground pin. Refer to the following diagram, taken from my IC-751A RAM board, which has the power and ground pins marked:



6. By whatever means, apply 5 volts to the RAM board's power supply pins. I used some cut-off resistor leads inserted into the connectors, with wires soldered to them, to connect to the board. If you do this, insert the leads from the foil side of the board to avoid damaging the connectors.

7. Using a voltmeter, VERIFY that you have 5 volts applied to the board (you DID turn on your power supply, didn't you?).

8. If all is well, turn the board foil-side up and desolder the battery pins, remove the old battery and solder in the new battery. Make sure that you orient

the new battery in
the same way as the old, and take GREAT CARE that you don't short out or touch anything
else on the board while you do this!

9. Reinstall the RAM board, and reassemble the radio. PS-35 owners: take care that the
AC and DC power cables aren't pinched between the PS-35 and the circuit boards; they should
run along the back edge of the power supply. Also, there might be a shielded cable plugged
into a circuit board (the PLL board) in the same area as the hole in the chassis where these
power cables pass through; make sure that you don't accidentally unplug it.

10. That's it! Apply power, turn on the radio, and you should be good for another 5 years.

6847. Re: IC751 memory loss?

Hi Guys,

I bought the Willco no-fail board for my IC751a, and don't worry about it. As long as Icom is around to help with it, it's no more than a $45 imposition anyway, <IF> it fails while you have it. The boards have been known to hold there memory for > 10 years.

73,

>I have an SB-101, and I need to know the difference between it and an
>SB-401, and an SB-102 as well. I know the 301 is a receiver...

Hi Pete,

Can't help you with the web site request. If there isn't one, there
certainly should be.

The SB-401 is a transmitter only (companion to the SB-301 tube-type
and SB-303 solid-state HF receivers).

The SB-102 is mostly the same as the SB-101, but the SB-102 has a
solid-state LMO. There are a few minor component changes, etc, but
nothing serious.

Why do you need to contact Fisher? (are they even still in business?)

This is typical in low-end electronics, but it can be solved. Most hams that have been around for a year or two could solve it (or greatly reduce it) for you in a heartbeat. If you know any experienced hams, try to contact him or her.

First, have you done any checking to see what the source of the RF is? Is it coming in on the AC line? Are you using the video feed into the TV or the composite signal from the VCR into the TV? Are you using good, shielded cable (in either case)? Are your connections good?

If all of the above checks out, have you tried winding the offending lead around a ferrite core for several turns?

If you are using the composite output from the VCR, have you tried a simple high pass filter? Does your "ham" equipment have a low pass filter? How about a good ground?

Contact a ham with some knowledge and he will go over this with you and you should be able to solve it in 30 minutes with maybe $5 of Radio Shack parts, if that. There is no point in contacting Fisher until all the easy fixes have been tried (99% of the time these will work).

Toby,

Hershman is a lot of mouth. He hints at some sort of inside knowledge
but in truth he has posted bad mods in the past. It is more important
to him to look like a big shot with inside knowledge than to publish
correct information. DON'T USE ANY MOD HERSHMAN POSTS Remember this is
the guy who claims to know more about Icoms than Gary Fibre the US Tech
rep. What are the odds of that?

From: Matt Musgrave <musgramj@boat.bt.com>
Message-ID: <33B1BA39.5B1C@boat.bt.com>
Source record: 172060

Can anyone tell me exactly what this linear is? I presume it is HF.Is it valve or solid state? What is the output? Is it any good and would it make a good combo with an Yaesu FT707.....and finally is it worth
100 (pounds sterling)

>range, better or more desirable?

One of the reasons that the IC735 remains a good choice is that there were
no significant production changes required during its lifetime, IE they got it
right the first time. So look at condition and not age when shopping for one
of these beauties.

>Any common failure modes or things to look for when looking at one?

The stupid little smoked plastic door tends to break off. Don't sweat it, leave
it off. That's the one dumb thing about this radio.

>What modes are standard? SSB/CW I know, but how about FM? AM?

Yep, it has all four. The one drawback is that it doesn't have a dedicated
RTTY mode, though you can make it work right for RTTY if you sacrifice
CW capability, or you can run AFSK from SSB mode.

>Standard filter complement? Are after market filters still available?

It comes stock with filters for SSB and FM/AM. A CW filter is optional.
I suggest the 500 Hz filter.

>Any comments about the 735 in general?

I tend to trade radios a lot, but the one constant in my shack is the IC735.
It is also the radio with the fewest modifications (and I like to modify radios
for better performance). While it isn't perfect, I think it is one of the best
balanced designs ever produced, IE considering everything from size to
price to ease of use to raw performance, Icom did a fabulous balancing
act with this radio. That's why it was able to sustain the longest production
run of any amateur radio in history. A lot of people liked it just as it came
out of the box.

Mike,
QRP kits by Oak Hills Research, Small Wonder Labs, and a couple
of others are top quality. See April QST for the kit my son is
building now. Also QST about June '96 reviewed some QRP kits.

For some reviews by those who have buily them see K5FO's web
site at http://reality.sgi.com/employees/adams_dallas/

and also Small Wonder Labs at

http://www.fix.net/~jparker/sml.html

Oak Hills also has a site. Search Yahoo by their name.
I believe it is http://www.ohr.com

Very well said John! The QST review of the TS850 showed it to have a fabulous receiver. I also have a TS850 that I have kept for my backup rig and now have the FT1000MP for my main rig. To me the 200 watts was not important and the fact that the FT1000MP was a little smaller and lighter was a plus for my station. I also did not need all the filters in the FT1000D, so it did not make sense to spend the extra money. On the other hand the FT1000MP has some very nice features that the older FT1000D did not have - dual s meters, quick memo pad, better front panel layout of much used vfo/memory functions, dsp (I much prefer not having an external dsp), dual antenna ports, and very important to me it can use dsp to enhance transmit audio. It is easy to set the FT1000MP to have spectacular transmitted audio. I have also found out that when using dual receive if I have the sub vfo set to 20 meters I can also monitor either 15 or 17 meters at the same time on the main vfo with almost no loss in signal strength compared to not using dual receive. Glad you are having a buch of fun with the TS850 John. It is a hard choice when trying to decide which FT1000?? to buy, but I though I would post what helped me decide for my ham shack for whatever that is worth.

Source record: 172068

I agree with lots of these points....

The '1000D is built like a tank and will run at 200W+ all day long and barely break a sweat. It has a better receiver than the 'MP. , IMO, the '1000D has the best receiver I have ever heard, bar none. Yaesu built the 1000D as its entry into the "ultimate rig" category. They built the '1000MP as a radio that would appeal to the largest buying group of hams...those who love bells and whistles. The DSP on the '1000MP is no better than an outboard audio DSP. The DSP on transmit is a nightmare...you'll screw around with it forever just to find ONE setting that sounds good. Any idea that you'll use the transmit DSP to "change the audio to suit the conditions" is not borne out by fact. Just get on 75m at night and ask around.

To the point about contesting and the rigs, I doubt that you'll find many of the big-time contesters using the '1000MP. Most of this group can afford the best and will not screw around with the MP. As time passes with the MP on the market, check out the survey in National Contest Journal to get a feel for that. I agree that the MP would be good for DXpeditions due to its toy-like weight.

No doubt that the MP is a nice rig with some good features, looks good, and is a good value. But, like the IC-756 and *its* big splash (because of the "neat" features), it may be disappointing if you are somewhat discerning and can afford better.

>How does the 510 compare to the VX1r? Also, is there a pic or any info
>on the www re: the 510? Thanks HT

They are really kind of different animals. The 510 has all the stuff you want for a full featured HT. DTMF memories, paging, code squelch, PL encode and decode, 200 memories, cross-band splits for use when accessing a cross-band repeater, etc. It also has wide receive range. The best feature of the 510, to me, is the one watt output on 3 AA cells. That's a respectable power out without worrying about NiCads. The radio is small, a little smaller than the Yaesu FT-11 and a little lighter.

The VX-1R is SUPER-tiny. It has DTMF memories but not paging. It does have PL encode and decode, as well as DCS. The actual number of memories is 52 for general purpose and about 30 or 40 others for special bands, band limit scanning, etc. There is another memory "configuration" to increase that to maybe 180 or so, but you cannot store PL freqs with the memory channels, so it is not useful to me. The receive range is wide and includes wideband FM which sounds really good, even on FM broadcast - not like the FT-50. Power output is 1/2 watt with the Li Ion battery. The most amazing thing about this radio, though, is it's size. Much smaller than even the C508A. Oh, one other thing - no crossband splits that anyone I have spoken with has been able to find.

My solution to "which one?" is "both!"

:-)

regards, Don (KE4KYO)

>
Joe,
I have an Icom 745 which is the "little brother" of the IC 751. It has the same configuration. The "operating system" (for lack of a better description) is backed up by lithium battery. A friend of mine and myself bought an IC 745 back in 1984 and he recently checked his lithium cells and found the voltage sagging. He tried replacing the cells with new lithiums and lost the memory. He lost all of the VFO control, etc. He borrowed my rig to see if that was the problem and sure enough the memory was gone so he sent the module back to Icom. I think it was $40 or $50 to get it back, however, they replaced the battery with a beefed up lithium which they said was good for 15-40 years!!! I replaced the lithium battery in my 745 and had no problem. I took a standard two cell AA battery holder, soldered two leads on it, and soldered those leads onto the memory module board. Took the old lithium battery out, replaced it with a new cell, unsoldered the AA batteries, and everything worked fine.

Thanks for the mini reveiw Don. I'm also having a difficult time between the two. I really like the size and frequency coverage of the Yaesu but don't like the half-a-watt and no keypad. But the standard has no way of charging nicads while on the road. The Yeasu will run one watt with a 6 to 12v source and take only one hour or so to charge the Li-on.

6907. New LZ / AlphaPower HF 1KW solid state automatic amplifier ??

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-25 00:00:00 UTC
From: morel@shani.NET
Message-ID: <01BC80E9.C3E91920@morel.shani.net>
Source record: 172102

Today I heard some rumors that LZ factory who manufactures
the 91-beta amplifier for AlphaPower (ex ETO), stated that
they are going to display this week-end a new solid state HF
1kw amplifier with automatic antenna tuner at HamFest in
Friederichshafen . It wasn't clear if it's manufactured and sold
under the auspices of AlphaPower like the bulgarian made
91Beta model, or it's a LZ factory private initiative.

If this is true, does anyone have more info ? I hope it's not
another mock-up, like Yaesu VL-1000 amplifier seen at Dayton.

73 de Morel, 4X1AD

If you are looking for specs, etc on old Tek and HP gear, I've got catalogs from the 70's. I don't want to part with them, but if you need info for a particular product, let me know. There is a surplus shop on Canal Street in NY that has HP catalogs (probably Tek, etc. as well) at least back to the 50's. OTOH, if you collect old stuff, good luck.

>Icom techs.

The design was established in the early 1980's about 1980 or 1981. It
is a cost effective design which has proven to be reliable over the
years. One can not even begin to guess how many commercial products
use a lithium battery backed ram, even some are still designed this
way today.

In the time frame of the design, the " new " eprom was expensive and
an unknown quantity. battery backed ram allowed for possible
upgrading and was real cost effective to manufacturer verses an eprom.

Now days ICOM has moved on to EEPROM chips for memory retention on
their radios and the CPU ROM now holds the operation parameters of the
radio.

> Barry N8PVX

I agree the case is a little expensive (I paid $25), but I really like it. Most of the HT cases are cheap vinyl and look awful. This one is leather and, I think, improves the appearance of the radio. I'd prefer a $25 case which looks good and is well made to a cheap one for $18-$20. I also found the antenna to be lacking in out-of-band receive performance (like the C508A antenna was), but OK in the ham bands. Did you have a similar view, or was it lacking in the ham bands as well?

Overall, I really like this radio a lot.

Yep... the Icom IC-751, IC-745, IC-R71A, IC-271, IC-471 and IC-1271 all use the same memory module, and all WILL lose their operating system if the on-board Lithium cell falls much below 1.5V or so. A fresh Lithium cell should measure around 3.3 - 3.5 V. I have measured a number of R71A batteries and have never found one lower than 2.7 volts.

There has been much discussion about this, and if you search DejhaNews or Alta-Vista for info on the R-71A you will find quite a bit of info.

There are basically 3 ways of dealing with the problem.

First, you can apply another source of 3 to 5 volts across the battery, then remove it and replace it WITHOUT shorting anything out. You can remove the module from the radio to do this.

OR

You can send it back to Icom and let them do it.

OR

You can invest $134 for a Willco Electronics ICM-1024B "No Fail" memory board. This borad simply replaces the Icom board and has the operating system in non-volatile ROM. If you aren't shy about modifications, this board can be installed in such a way that you can get 32 banks of 32 channels (1024 memory channels).

This board only works in the R71A, 751 and 745.

(815) 723-1874 for info.

Do you know if it works with 751A ?

Just looked schema of my 751A. The RAM board has pins like a RAM chip.
Does anyone have timing information of that ram board ? One way
could be cloning the module myself. Let me know if someone has
done this. I remember, that I saw an article somewhere how to read the
data from the RAM module.

6941. Re: TS-450S filters

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-26 00:00:00 UTC
From: turner@safety.ics.uci.edu
Message-ID: <5ouc49$h47@safety.ics.uci.edu>
Source record: 171936

For the 450 you have the choice of CW filters in either the 455 kHz IF and in the 8.8 MHz IF, or both. Of course, you can get great selectivity with a filter in both IF's, you gain the benefit of a pair of filters to cut out the nearby QRM.

I am told that the 455 filters have a better shape factor in general. That means that they are "sharper" in a sense, they will both sound a bit better when centered on the signal you want and eliminate nearby QRM a bit better. On that basis, if you were to buy one filter, get the 455 kHz one.

Then, if you ever find one filter just too little, you can get another one in the 8.8 line. What I would do, if I was really into CW, is get a 500 Hz filter in the 455 line, then get a 250 Hz filter for the 8.8 line, so I had both bandwidths available, or both for somewhat better selectivity especially for contests or field day.

You might also note that International Radio (INRAD, now in Oregon) sells filters for the 450. I believe they are both a little cheaper than Kenwood filters and have better shape factors.

Hope this helps.

I'm not (yet) a ham, don't know antenna theory, and don't know
how sturdy ham antenna's are. But I *do* own a Jeep Wrangler
and I *do* use it off road.

The spare tire stop bracket is a real convenient place to mount
an antenna - I've seen many Jeeps with CB antenna's mounted there.
But I believe that location is vulnerable to tree branches. I've
driven down old roads overgrown with trees and bushes to the point
I would have been concerned about an antenna mounted on the tire
stop bracket. (This is how you decorate your Jeep with what we
out here in Arizona call "desert pinstripes".) If you don't think
you'll ever drive on roads like this (ie. did you buy a *brand new*
Wrangler?), I'd recommend the tire stop bracket.

As for myself, I'm going to try mounting a CB antenna to the spare
tire mounting bracket (ie. in between the spare tire and the
tailgate itself. I may have to fabricate a bracket myself, but
this will put the antenna safely out of harm's way.

Hope this helps.

Help! My Outbacker Perth has high SWR and if I can't fix I toss it
out in the back with the trash!
--- ----

I installed it last night and I can't adjust the SWR on 20 meters. I
also tried other bands. The signal levels seem to increase when I
plug-in the shorting wire in the 20 meter socket but changing the
"spike" length doesn't effect the SWR.

I purchased the antenna last year at Dayton but never used until last
night. I can't find the manual :-(

Message-ID: <33B2C9BE.304B@cnet.com>
Source record: 171942

Biggest problem is that the bands won't work together (no scanning or offsetting between them.

The tone squelch opens too slowly for scanning to work with it well.

If you want to listen to landmobile channels in the T-band range you have to do it in the UHF-TV band where you can switch to narrow FM but cannot assign any tone squelch.

On the other hand, I'm impressed with its sensitivity. I'm pretty much able to work everything I need to here in the city. (I wouldn't bother taking it to the 'burbs, though)

Here's a question David Feldman sent me you might find interesting...

At 10:17 PM 6/25/97 -0700, you wrote:
>I would like to use it to receive broadcast TV audio and FM broadcast
>audio (as a kind of "walkman" application) with good sensitivity and such
>
>Dave
>
>

In that case it works GREAT. They got the filter width right this time and the sensitivity is good. I'm kind of close to a broadcast tower and most of my BCFM radios have trouble. The only thing wrong is that the selectivity is not the best it could be but is comparable to an average BCFM radio. Also remember that the VX-1R can receive AM BC and does it pretty well (helps if you hold the vhf/uhf antenna near some big metal object or hook up a more appropriate antenna.)

The AM BC band works kind of funny. It has 10 of it's own independent memories you can use but it doesn't use the frequency or alpha display. Instead, you tune it by using the s-meter as an analog tuning dial. It works fine, but it's weird.

Oh yeah, you can store BC frequencies in memory and label them with 6-digit alpha tags!

6948. Galaxy 99v clarifier problem

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-26 00:00:00 UTC
From: Jim Burke <burkejd@ifc.hsd.utc.com>
Message-ID: <33B2F073.931@ifc.hsd.utc.com>
Source record: 171943
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

I have a strange problem happening with this radio when it has been in my car all day long during a hot day.(In the 90's) When i turn the radio on (am), after about 10 minutes, the radio shifts down 2kc's & the course clarifier will only shift ~ 1.5 kc's when turning it from the low to the hi limits (should be +- 5kc's). The kicker is that this only happens on am & fm(all bands). Sideband is ok. (no shift & the clarifier works fine). When I get home & shut off the radio & come back out 1 hr. later, everything seems ok.

Has anyone experienced this or something similar, & if so do they know what causes this & a fix if possible.

Thanks in advance
Jim

Yes, I did that too. But got wise and built an adapter for my eprom programmer. Found it possible to reprogram, even to change the band plan. If there is enough interest I may open up a service doing restorations with modified band plans. It is possible to go slightly over 30MHz. THough 6 meters is a little aggressive IMHO.
If you ever have to change the batt, make sure something else is holding the voltage up, even a large cap with about a 10K resistor in series should suffice. And whatever you do, don't short out the power. I changed mine since my rig was 10 yrs old and wanted it to be reliable for 10 more. A $50 lesson (bot another board for only $10 more than programming). Doesnt hurt to have a spare.
Jim

This is typical of Yaesu HT's. In virtually every one I've had, the out of band mod breaks the ars function. It was this way on the FT-811, FT-815, and FT-530 I used to own, and it's true for the the FT-51 and FT-41 that I own at present.

Yes, I saw it and played with it awhile at dayton. Way cool. Two
observations: 1. As might be expected, the audio output is no where
near the level of the FT-50. I think it would be unusuable in
an automobile.

2. You should compare it to the new Alinco credit card sized HT.
It is pretty amazing too (though it is not on the market yet). Also
take a look at the new Standard 510. It was pretty impressive as
well.

After looking at all this stuff at Dayton, I bought the FT-50. It
is bigger and bulkier, but the audio is much louder and the power
output is higher. If 1/2 were actually useable around here, I
might have made a different decision.

From: "B. Diaz" <cqbdiaz@pacbell.net>
Message-ID: <33B34C96.3F31@pacbell.net>
Source record: 171959

If you wish to email me, please remove the letters "cq" from the start
of my email. (I put the letters "cq" so that the automatic email SPAM
programs will get the wrong address.) :-)

I've set-up my 2m/70cm radio in my car on a seperate car battery.
That way, if I forget and leave the radio on, I can still start my car.
However this means that I'll need to charge the battery every now and
then.

I was concidering using solar panels to do the job, but I'm not sure
how much charging current would dammage the battery if the battery
was fully charged.

If I feed 340mA of current to a fully charged battery, is that OK?

Does anyone know what the maximum level for a trickel charge should
be?

Thanks,

Bob

MY ANSWER:

--

If you wish to email me, please remove the letters "cq" from the start
of my email. (I put the letters "cq" so that the automatic email SPAM
programs will get the wrong address.) :-)

There are several good 2m/70cm dual band mobel rigs to chose from.
I feel that they're all good. The selection is a matter of which unit
offers what you like at the price that seems right to you.

In my case, I selected the ALinco DR-605T, it was $440 (USA) from Ham Radio
Outlet. If I wanted the CTCSS decode, I would have gotten the DR-605TQ for
$460 (USA). (The CTCSS encode is standard in both units.)

RX-VHF = 136 - 173.995 MHz
RX-UHF = 420 - 470 MHz

I don't believe it can do AM aircraft receive.

Size in inches = 5.51" (w) x 1.57" (h) x 6.9" (d)

The front panel does not detach.

The mike does have the DTMF tones.

I know that this unit isn't exactly what you specified, but I thought
you might want to take a look at it anyway.

Sincerely,

Bob KF6JHG

6974. New IC 708 preview

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-26 00:00:00 UTC
From: philus <philus@usa.net>
Message-ID: <33B2BECE.790A@usa.net>
Source record: 171969

Finally, I got to see the brand new prototype of the new IC708!
It is, like Alan, KA2PVR posted, the new IC 708 will have all the
features of the IC706mkII plus an extra 220MHz/440MHz transceiver.
Further, it will have a duplexer for crossband operation on
440MHz/220+146MHz. A good friend of mine, Masahiro Hiranuma of ICOM in
japan sent me a fax with the specs. The radio should be available at
Dayton in ‘98 at a suggested retail price of US$ 1599.
By the way, the optional DSP-Module for the IC 706mkII is sceduled for
end of this year.

73, Andrew Burbaker.

6976. Re: 1000D or 1000MP?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-26 00:00:00 UTC
From: jayk@fc.hp.com
Message-ID: <5ou1rb$hg1@fcnews.fc.hp.com>
Source record: 171971

: The '1000D is built like a tank and will run at 200W+ all day long and
: barely break a sweat. It has a better receiver than the 'MP. , IMO, the
: '1000D has the best receiver I have ever heard, bar none. Yaesu built the
: 1000D as its entry into the "ultimate rig" category. They built the '1000MP
: as a radio that would appeal to the largest buying group of hams...those
: who love bells and whistles. The DSP on the '1000MP is no better than an
: outboard audio DSP. The DSP on transmit is a nightmare...you'll screw
: around with it forever just to find ONE setting that sounds good. Any idea
: that you'll use the transmit DSP to "change the audio to suit the
: conditions" is not borne out by fact. Just get on 75m at night and ask
: around.

I've had the opportunity to set a friend's FT-1000MP next to my FT-1000D.
The MP has a fine receiver. I've compared it to the 1000D on HF and 144
MHz EME. There was very little difference between the two. At times either
rig seemed to be a bit better. The MP receiver is in the same class as
the 1000D IMO.

: To the point about contesting and the rigs, I doubt that you'll find many
: of the big-time contesters using the '1000MP. Most of this group can afford
: the best and will not screw around with the MP. As time passes with the MP
: on the market, check out the survey in National Contest Journal to get a
: feel for that. I agree that the MP would be good for DXpeditions due to its
: toy-like weight.

IMO the MP is one of the hottest selling rigs to the contest community.
If you hang out on the contest Email reflector and the Yaesu reflector
you will see the play the rig is getting. A number of prominent contesters
have even switched from the 1000D. I've seen a number of Email discussions
were the 1000D was considered slightly better than the MP and vice versa.
It seems close enough that it might just be personal preference.

: No doubt that the MP is a nice rig with some good features, looks good, and
: is a good value. But, like the IC-756 and *its* big splash (because of the
: "neat" features), it may be disappointing if you are somewhat discerning
: and can afford better.

IMO the MP was mostly leveraged from the 1000D. I don't see a lot of the
high end ICOM receiver qualities in the IC-756. IMO the two rigs are in
a totally different class receiver wise.

I plan to pick up a second rig before too long. It will likely be a MP
unless I get a great deal on a used 1000D. Receiver wise I don't expect
to give up anything with the MP. What I will miss is the 200w output and
Audio Peaking Filter.

Question about the TH79-E...
Who can help?

About one year ago I bought a TH79-E and after becomming familiar with this set I had to recognize that it always "beeped" while using both VFOs in 2m band. But this fault I could life with because I usually never
used both VFOs in the same band. Now I reconstructed the set for using it for PR in 9k6 mode. Now the "beep" always gets on my nerves while operating the TH79 in normal 2m/70cm mode. Has anyone experience with that
fact?
Thank for any hint.
(Total reset didn't help; independent whether used with battery or used with
an external supply power unit)

That problem never bothered me but the speaker on this radio is TRASH.
When I compare it to the FT 2500r it's like nith and day. So I cured
the problem by a Radio Shack square mobile speaker. Now it sounds
right.
Great Radio otherwise very happy. 73 Chris

Category: HF TRANSCEIVER
Manufacturer: KENWOOD
Price: $700

One owner very clean TS-440. Has the CW and 1.8 KHz SSB filters. Service Manual. Little use. Late Serial Number. As usual, I get around to bying a radio just before the new models come out. I am very pleased with the radio. (I would like to call it mint, but I would have to look it over very closely before I am willing to say that.)

7002. AEA LA-30 AMP ???

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-26 00:00:00 UTC
From: Wes Atchison <wes@iphase.com>
Message-ID: <33B2791B.2DC7@iphase.com>
Source record: 172028

I have aquired a AEA LA-30 HF amplifier. It uses a single 3-500Z. The original tube was shorted and I repalce it with a tube that appears to be soft. Did have to replace the grid current sinse resistor. I am having trouble loading this amp on 160 meters. It appears that the loading and plate tuning caps are to small. In fact on 80 meters they both tune near maixmum. I wonder if anyone who has had experience with this amp has used it on 160m? Your input would be helpful.

Thanks,

Wes WA5TKU

Don't hesitate to buy the Service Manual. These things are typcially
just involved enough that you NEED the pictures, captures, parts list,
board layout, block diagram, and tuning instructions or you will most
probably do more harm than good.

You can't afford a decent receiver if you can't afford the Service
Manual (IMHO).

I'm looking for a 160-10m mobile HF amp, probably in the 500 watt range. I'd be interested in hearing from anyone who has had good or bad experiences with HF mobile amps (especially on 160/80/40). Also, anyone wishing to sell such an amp, please email me to discuss possibilities.

Thanks in advance!

David (K5KH)

In addition every Yaesu since the 470 sets the offsets to 0 after the
mod and hard reset. You have to reload the 600 KHz and 5 MHZ values
after the reset.

The newsgroup rec.radio-commercial.lmr is NOT a valid newsgroup...MOST
ISPs do NOT carry it because it was not properly registered and
the REC and then COMMERCIAL violates the newsgroup protocols....

If someone would START a group called ALT.radio-commercial.lmr, it will
likely be accepted.....but I know of at least a dozen ISPs that will NOT
carry the rec.radio lmr group...

There IS a remailer on the net...LMR@ucsd.edu.....I believe it is a
listserv system....send a msg to listserv@ucsd.edu and tell it
"Join LMR"
and see if you get a reply..

7027. Yaesu FT-920 AM Improvement

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-27 00:00:00 UTC
From: ad7k@accessnv.com
Message-ID: <33b33fa8.2505181@news.accessnv.com>
Source record: 171894

The following was faxed to all authorized Yaesu/USA dealers
on Wednesday, June 18, 1997:

---begin quote---

Yaesu U.S.A.
Amateur Radio Products Division
Sales Bulletin no. 97-29

FT-920 AM Mode

Good news for the FT920 "AM" mode users. Yaesu U.S.A. is
offering a free AM feed
through board that will allow customers to use their
FT-920's in the AM mode without buying
an AM filter.

That's right!! All your customer needs to do is send a copy
of their FT920 sales receipt to
Yaesu U.S.A. Parts Department and request the "AM Feed
Through Board" (Part #
CB0381001).

This is a very simple plug-in procedure. The customer can
remove the bottom cover of the
radio and plug in this AM feed through board (where the AM
Filter normally fits) without
modifications to the radio. After installing this AM plug-in
feed through board, your customer
can use the FT-920 for Rx and Tx in the AM mode.

This offer is valid for FT-920's sold in the U.S. and Canada
only. For those customers who
want serious AM performance we still recommend that you buy
the optional "YF-117A" (6
KHz AM) plug-in filter.

Thanks in advance for your continued support of Yaesu
Amateur products.

Sincerely,

Kevin Karamanos
Director of Sales and Marketing
Yaesu U.S.A.

>Mark WA4E

That unit installs inside the Yaesu SP-5 or SP-6 speaker ...
takes its audio feed from the cable that goes from the radio
to the speaker, and feeds processed audio directly to the
speaker.

It does not hook up to the radio directly "per se", but in
actuality goes in series, between the radio and the external
speaker.

Very 73, and good luck!

>Can anyone tell me exactly what this linear is? I presume it is HF.Is it
>valve or solid state? What is the output? Is it any good and would it
>make a good combo with an Yaesu FT707.....and finally is it worth
>>100 (pounds sterling)
>
>73s Matt G0ESL

If it's an FL2010, it is a 3 Watts in, 25 Watts out
linearized solid state amplifier for use with the FT290R
series radios.

If it's an FL2100(or -B or -F), it's a 2x572B amplifier for
HF.

Price depends on it's actual number.

Very 73, and good luck!

I've formed the ends of wire antennas into loops to avoid this
problem. As a bonus, you can now tie a piece of string to the
loop and hang the antenna off a convenient support.--Zack Lau W1VT

I would like to realign the above receiver to eliminate the 30-40Hz frequency offset between AM and SSB reception it has now... without having to send it to Icom and lose its use for a few days. Can it be done?

Please give me a hand if you know what to adjust inside, if the procedure is simple enough to be undertaken at home. Since I don't have their Service Manual I would need some precise guidance. Don't hesitate to contact me if you have any ideas or advice to share. If you have any instructions on paper I will pay for photocopying and mailing them.

Thank you.

>
>I purchased the antenna last year at Dayton but never used until last
>night. I can't find the manual :-(

Eeek! Don't toss it "out" "back" with the trash... toss it to me!
I have a Perth that works extremely well, and I'm very pleased with
it. It's easy to use, durable, compact, etc.

I can send you a copy of the manual, if that will help.

In a nutshell, here's how to set the antenna up. To select a band,
plug one end of the "wander lead", as they call it, into the "75m"
tap at the bottom of the antenna, coil the wire loosely around the
antenna, spiraling upward, then plug the loose end into the tap for
the band you want to operate on. The "wander lead" is 36" long.

There is also a tap near the bottom of the antenna that connects to
a matching transformer that Outbacker calls the "roo match". To use
it, connect that tap to ground. Its use is optional, but I find it
helps me get a better match on my Perth. The ground lead can be as
long as necessary, but the shorter it is, the better.

Once this has been done, then slide the 3' stinger out about 3/4 of
the way, tighten the thumbnut, and check the VSWR. You adjust the
stinger up or down as required, same as with any other antenna. To
check the VSWR, make sure no one is standing near the antenna, as it
is quite sensitive to this, and readings will be affected. I use my
MFJ-249 VSWR analyzer to adjust the stinger. It really makes the
job easy! I was able to find one stinger setting that works on all
bands except 75m and 30m, so I don't have to re-adjust it when I
change bands.

Contact me back if I can help, or if you want a copy of the manual.

73,

Dean K5DH

> Thanks Bob
Any Alpha is better than the old heath SB220! Not to degrade the
Heath, but the Alpha 76 uses the ceramic tubes which can be driven
to full output with as little as 65 watts and are quite durable. The
powersupply in the alpha is MUCH heavier duty and will work any mode
you throw at it and be very clean. There is simply no comparison in

construction. You never know who or how well a heath was put
together. If you have the oppertunity to purchase a used 76 at a
reasonable price, BUY IT!! It will most likely be the last amp you
ever purchase because they run forever...

I have a Standard 468A Talkie (440) for sale with battery, wall charger, 200 memory chip, and soft case. It has been Mars Cap modified and is in perfect condition.
I also have a Yaesu 41R small Talkie (440) with battery and wall charger, and case. Also an empty battery case for AAs. It has been modified for Mars Cap too. Both of the above are in perfect condition.

I want $260.00 for the Standard and $250.00 for the Yaesu.
If interested, leave me e-mail. Thanks.

7049. Re: Yaesu VX-1R Mods breaks the Automatic Repeater Offset.... Anyone know how to fix ?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-27 00:00:00 UTC
From: childers@garlic.com
Message-ID: <867434738.25738@dejanews.com>
Source record: 171916

ARS is disabled in the FT-50R as well as the VX-1R... even when turned on
in the menus, and correct offset is programmed, the ARS feature doesn't
work. I can only assume this is because when the radio is modified, the
CPU assumes that it's in a different country's bandplan.

OK last time we tried this (last week) it generated lots of hate and discontent but no mods so I will try again.

Does anyone have the modification instructions (possibly remove 2 or 3 diodes) for opening up the ICOM IC706 MkII radio???

It is new but someone must have figured this out by now.

Thanks in advance and lets play nice,

Bill Harwood

7052. FORSALE - Immaculate Kenwood TS-520, great starter rig

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-27 00:00:00 UTC
From: jpl@qc10.ho.lucent.com
Message-ID: <5p122n$jgj@nntpa.cb.lucent.com>
Source record: 171919
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.misc,nj.forsale

I have a virtually immaculate Kenwoods TS-520 rig that I would like to sell.
This was my first "real radio and in my opintion is still
one of the best rigs around. It would make a fantastic beginner
station or a great backup rig.

I am only the second owner of the rig.
I purchased it from a collegue of mine at Bell Labs (who
was the original owner), and I have the orignal sales receipt,
boxes, and manual for it. Both he and I took
exceptionally good care of this rig. It has NEVER been in a smoking
environment and has NEVER been mobiled.

For any novices not familiar with this radio, it is all solid state
(discrete components, so its very easy to repair if ever needed)
except for a tube driver and a pair of very
robust 6146 tubes as the finals. It has a builit in power supply,
but can also run off of 12VDC.
It covers 80,40,20,15, and 10 meters in CW and SSB (upper and lower) modes.
The receiver section is excellent and I always get excellent audio quality
reports. Many folks say that these older Kenwoods are some of the best
sounding rigs on the air.

This rig also has the optional 500Hz CW filter
installed (genuine Kenwood option).

The price is $300 firm + shipping. You might find one for a few $ less,
but NOT is this great condition.

I had a Create tower...built like a brick "outhouse"...Again, make sure
the roof rafters can hold the torque and weight. I put two pieces of
wolmanized lumber under the feet of the tower and ran them perpendicular
to the roof rafters. Worked great!..

Good Luck..

From: djeo1@MAIL.TELIS.ORG
Message-ID: <5p0plf$a2r$1@mentor.telis.org>
Source record: 171922

I have owned my TM-631A 2m 220m radio for about 6 years. It has worked fine until just recently it started to loose stored memory. So I changed the battery. I put the radio back together an found out that was not the problem. I called Kenwood and explained the problem. Kenwood referred me to their directory web site that explains step by step proceedures along with drawings for certain aftermarket modifications for incurred problems such as the one of losing memory. Like the problem I have. In the meantime since changing the battery and putting the radio back together (and not fixing the problem) I have incurred another problem. When I turn on the radio to a pre-tuned signal i.e. NOAA, the signal is in the background and there is white noise in the foreground. When I do a band change from one band to the other, the signal comes clear and the noise goes away and everything is just dandy. I carefully inspected where I soldered the battery to verify that I did not hurt any of the circuitry. I have even cleared and reset the processor. At this time I am still experiencing the same problem. Does anybody have any ideas of what the problem is. Please e-mail any suggestions to:

Source record: 171925

I'm looking for a owners and/or service manual for the SBE Opti-Scan VHF/UHF scanner.

Also the frequencies are programmed by plastic cards that are put in the front of the radio. Can these cards be made by cutting out plastic cards of the same size and punching holes in it like a programming book would tell you?

Please email me with any details you may know of this radio.

You know that you can't program the radio via the side connector, right?
The programming software is contained in an EPROM that plugs into your
R1800 suitecase programmer. You must screw the EEPROM codeplug from your
MX300-S onto the MX300-S programming head on the R1800. If your radio
doesn't have the S (MX300) on the top, you will need to order channel
elements to put it on frequency.

There's a morse code program called "morse" that runs on several flavors
of Unix. The Sun version has an annoying "click." I have a fixed version
but don't know who maintains, archives or otherwise cares about it.
Anyway, here's "beepSun.c" Enjoy..

73..Jim N2VNO

----------------start of beepSun.c----------------------

```
/*
* If the audio library or audio include files are missing, you need
* to get /usr/demo/SOUND off the Sun OS tapes or CD.
*
* This routine will turn your audio device up to full volume, but
* will not attempt to reset the current speaker / jack choice.
*
* The sun speaker has a residual "click" each time it switches from
* silence to tone that I am unable to rid it of.
*/

/* N2VNO 6-97 Fixed "click", caused by:
- using 0 to generate "silence", should be 255.
- Previously generated tone was shortened when playing shorter
tone, causing ramp-down to be chopped off.
- Discontinuous values between steady part of tone and ramp-down.
*/

/* beepSun.c -- seligman 6/92 */

/*
-- Implementation of beep.h for Sun.

The Diamond SRH-519 is designed for transmit and receive on 2 meters
and 440, and also receive on 800 MHz. It has an SMA connector and fits
perfectly on the C510A, as well as the C508A.

regards, Don (KE4KYO)

I just recently got a VX-1R handheld with the full extended
tx/rx/cell mods and now the ARS (Automatic Repeater Offset) is broke.
Even when enabled is dosen't work.

Anyone have any luck or know of a work around?

PS. No I don't know how the mods where done, they wouldn't tell me ;)
But I'd love to find out if anyone knows just for my files....

Yes there is one from an outfit called EZClone, they have a web page the URL of which escapes me at the moment. The supplied adapter for radio to computer is not as nice as the ADMS one but is useable. I am trying it out on my 200lx and expect no show stoppers.

Interestingly these guys have a version for DOS and 32bit (95/NT) but none for Win3.1 I have used the DOS version on several platforms and it seem to work fine.

>
>-- Jim, KC5OA

That's funny Jim I have a couple of 530s and a 51 all have the extended mods and all do the ARS just fine. You do know that ARS is set to "OFF" as a factory default and when you reset the HTs after making a mod you go back to factory defaults, don't you? The only Yaesu I have with this annoying "feature" is my FT-5100 but I don't own any of the others you cite so I can't comment on them.

> operating system would be lost???

Joe,
You are correct. If lithium cell does go bad the RAM unit will have to be reprogrammed. ICOM does use a very premium battery and looks as though their life expectancy will be on average 12-14 years in circuit.

The problem described sounds like bad connections on RAM unit caused by torsion of the board and heating from TTL level components in area. Try carefully inspecting board under light and magnification for darker gray rings around connector solder connections.

Very carefully soldering will correct problem. PS lithium cell should measure 3.3V. Anything below 3.1V is history.

7088. ICOM IC-756 Mods

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-28 00:00:00 UTC
From: D & P Graham <pgraham@bluering.cowan.edu.au>
Message-ID: <33B47A73.74E@bluering.cowan.edu.au>
Source record: 171847

In April 1997 QST (p63) the ICOM IC-756 HF/6mx transceiver was reviewed.

The results were generally favorable, although the ARRL reviewers found that the transmitted bandwidth on CW and the IMD performance on SSB on higher frequency bands was not as good as desirable. ICOM were advised and they provided a modified radio which largely corrected the problem. ICOM were quoted as saying that the improvements would be incorpoarted in production "from April 1, 1997". (Pity about the date!)

Can anybody provide the answer to the following:

(1) From what serial number would the mods be included?

(2) What are the actual modifications?

(3) Can the modifications be retrofitted to existing units?

Don Graham (VK6HK)

>be?
Suggestion ... go by an RV dealer and pick up a "Battery
Isolator" ... should not cost very much ... that will allow
your auxilliary battery to charge from the alternator, thus
keeping it fully charged, but keep current from flowing from
the aux battery into the main electrical system of the
vehicle. (Yes, there is a diode in there which will drop the
typical .6V or so across itself, which means that the
battery will be "almost fully charged" ... but close
enough!)

Very 73, and good luck with the project!

7097. Alpha Amps - New Alpha/Power (ETO) Web Site...

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-28 00:00:00 UTC
From: sandy@sandy.com
Message-ID: <5p2fm0$49a@surf.com>
Source record: 171856

You're invited to "See The Quality, Feel The Power"
of the latest Alpha Linear amplifiers at Alpha's
new web site:

http://www.alpha-power-inc.com

Lock in the current price by getting your 10%
deposit to Alpha/Power before July 31, 1997.

Due to the ever increasing costs of buying the
quality components we use to build our Alpha amps,
we are forced to increase our prices as of July 31.

Alpha Amp	Current Price	July 31 Price
Alpha 87A	$5,890	$6,390
Alpha 89	$3,695	$3,995
Alpha 91b	$2,698	$2,798

You've always wanted an Alpha Amp, so why wait any
longer? You've seen the rest, now own the best!

For additional information about Alpha amps,
please contact Dave or Brad at:

Tel: (970) 535-4173
Fax: (970) 535-0281
Email: sales@alpha-power-inc.com

Alpha/Power was founded more than a quarter century
ago as ETO (Ehrhorn Technological Operations) to
design and manufacture the best possible maximum-
legal-power, continuous heavy duty, HF linear
amplifier for radio amateurs.

Alpha/Power (ETO) amplifiers contributed to the
expressions brick-on-the-key, maximum legal-power
and all modes, no time limit to the lexicon of
amateur radio. They pioneered the no-compromise
desk top amplifier, hands-off no-tune-up operation,
full break-in (QSK), standard 160 mater coverage,
and microprocessor-controlled automatic bandswitching,
tuneup and remote control.

Alpha/Power (ETO) also has pioneered realistic buyer
protection with long term limited warranties (never

prorated and now an unequaled four years), and the
money-back guarantee.

Please respond directly to Alpha, NOT to me! Thanks.

7099. Re: Need: IC-706 tuner pinout??

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-28 00:00:00 UTC
From: Stan Staten <w3ink@erols.com>
Message-ID: <01bc83ac$1373c8e0$1389accf@sstaten.erols.com>
Source record: 171858

Brian,

Thanks for reply. My manual on page 12 lists "Advanced connections" but no pin-out. Page 14 shows how to attach the tuners. Page 6 lists the 13 pin Din. The other connections are similarly listed. Only the 4-pin molex for the AH-3 isn't shown as to what connection is what.

73 Stan, W3INK

Message-ID: <33B54D37.717E@ix.netcom.com>
Source record: 171873

Good morning,

I recently purchased a CS-800 Phone patch. It works great now, but it would work even better if I could get it connected internally to the radio I'm using with it. What I need to find is where the CTCSS decoder is. That would be the best spot to connect a wire. I am using an Alinco DR-570. Anyone online here know how I could go about finding such a place on such a radio to make a connection? I'm not sure what I should be looking for which doesn't help any I know. Any help is appreciated.

There is another solution...

There's a company that sells for about $60 a PROM replacement for the RAM.
..I don't have the name handy, but if someone really needs to know, I
can dig out the catalog. I own a 745 and a 475 which also use the battery
backed up RAM....what a stupid idea.

Picked up a VX1R today and found one "gotcha" in the errata sheet I'm not happy about - the battery does not charge while the radio is turned on. Also discovered a feature I didn't think was present - it CAN send DTMF by manipulating button/knob controls in a given sequence (there is no DTMF pad).

>
>73 Dave WB0GAZ dgf@netcom.com
>

... and one other "gotcha" - the "VHF TV" band only covers "high band" channels
7-13; channels 2 3 4 are not available and audio from channel 5 and 6 are
available in the "FM" band (76-108 MHz) at 81.750 and 87.750 MHz. Not the end
of the world, but a bit irritating (as I intend to use the radio walkman-style
for BC/TV RX much of the time).

Dave

I just called up a couple of my informants (names withheld for security)
and they said they have NOT heard of any info about a Icom 708 or that
the DSP feature on the IC-706 MK II being released in the fall. This is
not to say that it isn't true but my sources are extreamly accurate and
they do not lie when they are interogated (tortured)....(just kidding).

I have a Perth and when I first installed it on the my motor home, I also had a very high swr. I thought it was grounded well, but decided to run a couple more ground wires to the side of the motorhome. Presto, the swr came right down. I did have to order a longer stinger for the low end of 80 meters to work pactor. You will probably have to sweep frequencies (on very low power) to see where it resonates and then adjust the stinger accordingly. Also, it is important which direction that you wind the wire. As I recall, it goes clockwise up from the bottom.

I am pretty sure that the HTX-242 is made by ADI. All the buttons and features are the same as the ADI 2meter mobile. BTW, ADI made the now recalled HTX-204. Just my 2 cents. 73

!HELP HELP HELP HELP HELP HELP HELP HELP HELP!
I would like to take my IC-551 on a mobile trip over the 4th of July.
But to do so I need to run my IC-551 on DC; all the manual refers to is the
"supplied DC plug", which of course I don't have!
Neither the Op Manual or the Service manual specifically state which pin is
+DC and which is -DC. It's a 4-pin inline with a pointy end

```
-----------\
| O O O O > <--- this is the pointy end.
-----------/
```

Can someone please tell me the secret answer so I can have some fun on 6m?
THANKS IN ADVANCE!!!

Matches IC-735, but works with most any ICOM hf rig (with proper cable)

Multi-coax outputs; 1 random wire out
Pre-sets for each band make auto-tuning very quick and precise

Requires no external power; small and lightweight

Has never been fed with more than 150 watts (the rated maximum)

Absolutely showroom condition, inside and out...
Packed in original carton, complete with instructions

$300, including shipping at my cost ($529 in latest HRO catalogue)

This is a firm price

Dear Mr. Stedman;
The Garmin GPS II+ does have a NMEA 183 interface. I have used it and
it works without a hitch.
The Garmin printed data sheet indicates that coordinates may be
displayed in Maidenhead in liu of Lat/Long. The manual indicates the
same. I have not used this capability.
The GPS II+ is a fine unit. Lowest price appears to be from Shoreway
Marine 800-443-5408 @ 229.95.
Enjoy, Mac

<http://www.ee.washington.edu/eeca/circuits/transmit.html>

7145. FS: Yaesu FT-890AT & mobile/base accessories!

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-29 00:00:00 UTC
From: "Michael Conner, KQ3P" <mconner2@utk.edu>
Message-ID: <33B71F2C.138C@utk.edu>
Source record: 171756
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.swap,rec.radio.amateur.misc,rec.radio.amateur.antenna,rec.radio.amateur,rec.ham-radio.swap

FOR SALE:

YAESU FT-890AT in excellent condition. Has built-in antenna tuner (great for mobile use), built-in cw keyer, 100 Watts output, general coverage receiver, and all mode transmitter. Comes with hand-held mic. Still have original box and owner's manual. I always found this rig to have a really great receiver.

Also for sale:

YAESU YS-60 SWR + Power meter (matching color to 890)
ASTRON RS-50M (with meters) (barely used)
BENCHER BY-1 Keyer (barely used)
HUSTLER Mobile resonators for:
80, 75, 40, 30, 20, 17, 15, 12 and 10 meters (low power models)
AND two masts - one stainless steel and other is fiberglass covered.
Also have a mast mount for base use.
(all resonators in good condition and worked well for mobile and base!)

and I'll throw in a 75' length of 9913 coax (no connectors).

Prices dependent on who pays shipping, but figuring:

FT-890AT $750
YS-60 $ 70
RS-50M $175
BY-1 $ 60
Hustler $150 for all including masts.

Would prefer to sell entire package. Am selling because work hours are too long and I don't travel any more and the cash would be useful.

Please e-mail me for further details, or call in the afternoons at work: (423) 974-0123.

Thank you!

> -Charlie WB4HVD

The TM-V7A is an excellent choice! Of course you will pay a little more than $500. The improved heatsink chassis is impressive for better cooling efficiency. This translates into longer keydown time and longer life expectancy on the final transistors. There are 3 programmable scan ranges for each band.

The voice synthesizer is a nice addition for frequency readback. The visual scan feature is similar to a spectrum analyzer to locate band activity. Built in encode/decode with tone scan.

For the packet users out there, you can operate data mode and voice at the same time.

280 memory channels! The EzClone software is a nice addition for uploading and downloading your frequency information for later retrieval.

I don't know this radio, but the symptoms described suggest that the AM/FM carrier oscillator is at fault. The radio probably has 3 carrier oscillators, one for AM/FM, one for USB, and a third for LSB. Typically, these are crystal oscillators. It sounds like the AM/FM carrier oscillator is temperature sensitive. This is likely the crystal itself given the amount of shift. If my diagnosis is correct, you'll need to replace this crystal.

David,
Do a web search on HAM radio and amateur radio. There is TONS of info available to answer all your questions. Or go to http://www.hamradio-online.com/

They have a new ham section there.

Ham radio is a LOT of fun. Yes, equipment is needed and some electronic knowledge as well but you can do it! Look into it! Prices can be cheap or expensive. You can get on 2 meters for pretty cheap with a used handheld radio. Go to radio shack and buy the book "Now your talking".

Before you chuck it in the trash, Jack, check the feedline, mount, and
ground connection. The problem might not be in the antenna. It could be
a fault in one of the ground paths. If the coax shield isn't grounded at
the mount, you can get the symptoms you report.

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author.]

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their crystal controlled, transistor Plectron and Motorola desktop monitor receivers. They have now been replaced by battery operated portable pagers, and the desktop models are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. They are desktop models which can be powered from 117VAC or 12VDC with the proper mobile cord. The audio quality of a Plectron P1, Plectron 700 series, and Motorola Alert Monitor is far better than any consumer grade scanner and the sensitivity, image rejection, and intermod immunity is outstanding when aligned properly.

The Plectron and Motorola Alert monitors are single band receivers: VHF-low, VHF-high, or UHF. No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

AC power cords for both types of receivers use unique connectors and are scarce. You can buy them new but it's much cheaper to drill a hole on the rear panel and attach a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. You can also get Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectrom SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model	UHF	VHF-high	VHF-low
SM-301	X	X	X
SM-302	X	X	
SM-303	X	X	
SM-304	X	X	

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

Antenna System For Sale

Moving to restricted subdivision on Fla. sea shore in late July/early August. The system will come down during the next three weeks.

Antenna system consists of:

1. 80' motorized aluminum crank up tower by Heights Towers. Legs are 1 3/4" thick wall hardened aluminum pipe, and cross bracing is 5/8" soid aluminun. This is an extreme duty TWO section triangular tower, which easilly withstood huricane Andrew. Bottom section is 36" per side at the base, and 30" at the top (48'high). The top section is 24" per side and is 32' high. This is a stand alone tower (no guys) and is motorized with an electric winch and stainles steel cable. All hardware is stainless steel. Total weight is approx. 650 lbs. Original cost was $6,100.00 in '92. It remains in perfect condition. The base which is buried in 8 cu/yds of reinforced concrete (and obviously stays) is simply three 7' X 1 3/4" stainless steel pipes the tops of which protrude 9" out of the concrete. The 3 legs of the tower bolt (2 bolts each) to 1/2" thick stainless steel plates which are welded to opposite sides of the tops of the pipes. This would be very easy to fabricate (as opposed to spending $400 from the factory as I did.) Price now:...$3,000.00

2. KLM KTX34A tri-band beam (5 el on 20m, 5 el on 15m, and 6 el on 10m) 3 years old (had a mosely pro67b up
for year and a half, but didnt like the performance.) This is a big antenna, but it's a pileup killer. New...$740.00 Price now:...$500.00

3. Cushcraft 40-2CD 2 element 40 meter beam...2 1/2 years old. Have 226 contries confirmed on 40 since I put it up. New...$450.00
Price now:...$300.00

4. Yaesu G-1000SDX variable speed rotor with 12' of heavy wall aluminum mast. New...$520.00
Price now:...$300.00

5. Cushcraft 13 element 2 meter beam on side mounted seperate rotor (Radio Shack) at top of tower...2 years old. New...$160.00 Price now:...$100.00

6. Associated mil spec RG213 coax for both hf antennas included with it's corresponding antenna.

Since putting this antenna system up in various stages, it took me 2 years to work 5 band DXCC (Plaque dated March 27, 1995,) with 308 total confirmed, with 226 on 40 meters.

Selling price for complete system is $4,000 U.S. Dollars and I'll take it down. You pick it up.

Antenna System For Sale

Moving to restricted subdivision on Fla. sea shore in late July/early August. The system will come down during the next three weeks. When I put it up, I thought it was "forever" and spared little expense.

Antenna system consists of:

1. 80' motorized aluminum crank up tower by Heights Towers. Legs are 1 3/4" thick wall hardened aluminum pipe, and cross bracing is 5/8" soid aluminun. This is an extreme duty TWO section triangular tower, which easilly withstood huricane Andrew. Bottom section is 36" per side at the base, and 30" at the top (48'high). The top section is 24" per side and is 32' high. This is a stand alone tower (no guys) and is motorized with an electric winch and stainles steel cable. All hardware is stainless steel. Total weight is approx. 650 lbs. Original cost was $6,100.00 in '92. It remains in perfect condition. The base which is buried in 8 cu/yds of reinforced concrete (and obviously stays) is simply three 7' X 1 3/4" stainless steel pipes the tops of which protrude 9" out of the concrete. The 3 legs of the tower bolt (2 bolts each) to 1/2" thick stainless steel plates which are welded to opposite sides of the tops of the pipes. This would be very easy to fabricate (as opposed to spending $400 from the factory as I did.) Price now:...$3,000.00

2. KLM KTX34A tri-band beam (5 el on 20m, 5 el on 15m, and 6 el on 10m) 3 years old (had a mosely pro67b up
for year and a half, but didnt like the performance.) This is a big antenna, but it's a pileup killer. New...$740.00 Price now:...$500.00

Can someone tell me where how to tweek up the deviation on an FT-5200.
Mine has become kinda quiet - yelling into it will give about 3 to 3.5
KHz of deviation.

Thanks

I have one of these, but somebody else built it. Great rig!
Used it all through field day on a 17ah battery.

You must have an scope to align it, but the factory will do it
for abt $45

>
>Thanks & 73... Mark AA7TA

Mic connector pinout
1 AF in
2 +8 VDC out
3 Freq up/down
4 NC
5 PTT
6 Gnd
7 AF Gnd
8 AF out

Connect the microphone element between 1 and 7, nominal 20-100 mV across 600 ohms
is the desired signal level. Connect pin 5 to pin 6 to transmit.

The transverter jack is a RCA connector. Output is a nominal 30 mV across 50 ohms.
To put the radio into transverter mode, apply 8 VDC to pin 6 of the ACC-2 connector.
This forces it to transceive out the transverter connector.

Note that the transverter output is quite low, -17.5 dbm, and won't drive several of the
common transverters which require +1 dbm to +10 dbm. And several of the popular
transverters split IF in and out to separate connectors. The better way to use this radio
with a transverter like that is to open it up and unplug the cable between exciter and PA
at the exciter, unplug the cable from the transverter port to the exciter, and plug it into
the
exciter PA port from which you just removed the other cable. This will supply sufficient
drive
to the transverter (actually a bit more than you need, turn down the RF power control
behind the little plastic door to the appropriate value, about halfway for a MMT432S).
Connect transverter IF out to the Rx antenna in connector on the radio. Don't apply
voltage to ACC-2 pin 6. That isn't needed in this configuration.

If the transverter has a single IF in/out port, then you may have to do a bit more
work. There's a mod you can do which will boost transverter output in the transverter
transceive configuration (should have been that way from the factory), but if you don't
have a service manual I'm hesitant to give it to you. It is hard to explain where the parts
are without the board layouts. An alternative is to put a MAR-4 in the transverter, between
the TR circuit and the transmit chain, to boost the level up to what it expects. This is
easy
to do to a SSB Electronics transverter.

I don't know what Icom was thinking when they only provided -17.5 dbm at the transverter output. I don't know of *any* amateur transverters designed to use that drive level. They all want +1 dbm or more. Perhaps Icom had the intention of offering one at the time they designed this radio but never followed through.

Note that there is a third way to use this radio with a transverter. Hook the radio up normally to a dummy load via a 30 db coupler. The tap of the coupler can then drive the transverter. Use a TR relay to switch directly to the transverter for receive, or use the separate Rx port on the radio if the transverter has a split IF. This kind of hookup will work with any 100 watt HF transceiver. It's wasteful to blow off that much HF power, though.

Typically, a 0.01 C charge rate can be sustained indefinitely. For a 50 A-hr battery, that would be a charge current of 0.5 A. When the battery is partially discharged, higher charge currents can be tolerated of course.

You could fit a dual battery kit to the car as an alternative and allow it to be charged by the vehicle alternator. These kits are available at most RV supply stores and consist of a heavy diode pair and some wiring. The diodes isolate the two batteries from each other so that loads applied to one don't draw down the other. They still charge in parallel from the alternator. The wiring, different for different makes of vehicles, allows the alternator's regulator to properly sense charge levels so that it won't boil one battery when the other is nearly dead.

In a previous article, cqbdiaz@pacbell.net ("B. Diaz") says:

>
>I've set-up my 2m/70cm radio in my car on a seperate car battery.
>That way, if I forget and leave the radio on, I can still start my car.
>However this means that I'll need to charge the battery every now and
>then.
>
>I was concidering using solar panels to do the job, but I'm not sure
>how much charging current would dammage the battery if the battery
>was fully charged.
>
>If I feed 340mA of current to a fully charged battery, is that OK?
>
>Does anyone know what the maximum level for a trickel charge should
>be?
>
I don't know what it's called, but RV dealers sell a device for keeping a
second battery charged (such as the 12 V RV batter to power the lights in
a travel trailer). It will probably meet your needs. It isolates the
twe batteries from each other.

7205. Chair-Pak !! a backpack with a built in Chair !!

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-30 00:00:00 UTC
From: chairpak@chairpak.com
Message-ID: <33b77bdf.0@news.net999.com>
Source record: 171642

Welcome,

Chair-Pak is a great idea!!!

It's a Backpack AND a built-in Chair!!!

See it at http://www.chairpak.com

3 Sizes Full Pak, Day Pak, and a Child Pak!

How many times have you gone somewhere and needed a chair ?
beach waiting in line with friends
hiking around the campfire conventions
air shows at the park in line at the DMV
outdoor concerts hiking trails car shows
camping on campus reading at the poo l /beach
fishing trekking rest areas
poetry readings jams outdoor games
outdoor sport events story telling to children picnics
theme parks national parks hunting
backyard outdoor weddings and anywhere you want to SIT!!!

Carry your stuff and your chair where ever you go!!!

Where do you want to sit today?

Chair-Pak is made of the strong durable Dupont Cordura and the frame is of strong and light T6 aluminum.

If you would like to order, or get more information about Chair-Pak, please visit our web site

http://www.chairpak.com

I stated out with a 212, never had any problems with it.

> If you have seen these
> problems with these two radios please e-mail me with the details of your
> problems and what Tandy did to resolve the problem. A few of us have
> been burned by Tandy with these products. I myself went through six (6)
> radios starting with the HTX-212.

I worked at the local Radio Shack for a while, you should never have had to send the radio back six times.
It is Radio Shacks policy that if a customer has to return it a forth time, the store will replace it.

> I now have the HTX-242 and I still
> have problems with the radio, the deviation is too low on the DTMF

If you had all of these problems with Radio Shack/Tandy and the htx-212, why did you buy a htx-242?

Hi there
The best way to improve wideband reception would be to use a discone antenna from Radio Shack. These are very wideband.If you find rg8 coax too big, try rg8 foam wich is smaller. I tried my ft-50 with an outdoor antenna and it sure makes a lot of difference. Watch out for intermod, ht's are very susceptible to that.

Hi, guys.
My call is CT2GEU, and my name is Andre.
I have an FT-707, with the tuner FC-707, and the external VFO FV-707DM.
I would also like to buy the transverter for 144 Mhz.
I know that there are 2 transverters. One that makes the 144Mhz (FTV-707),
and another one that makes 50, 144 and 432 Mhz (FTV-107R).
If anyone as a piece like these for sale, just let me know, in order to
arrange prices and shipment.
Thank you very much everybody.
73's. Buy.

The manual (I just bought one) claims there is an alternate battery type holder that uses a *SINGLE* AA cell (Alkaline), with an integral voltage doubler in the battery carrier. It's got very limited capacity (reduced power & life) and can't be recharged in-place.

From: Robert Chisholm <chisholm@spec.com>
Message-ID: <01bc8560$a2fbd920$c0956bc0@sleepy.spec.com>
Source record: 171693

Tom,
I believe that the 2400 uses a capacitor to maintain its memories when the power is off. I do not know how long the cap with keeps the memory "sane" but I do know that after some time the radio when powered up will display this condition because the cap was out of juice and was unable to keep the memory charged. If this occurs after your wife has not driven the car for a while this is probably the cause. If you wife drive the car daily it could be that the cap is bad and is not keeping the memory as long as the factory designed it to. I again do not know what the time is that the memory should be maintained. I keep my on hot power all the time and of course don't have this problem. I am not sure if by "freaking out" this is what you mean but I have seen this condition I described happen if I keep the radio unplugged.
If it is a spike then maybe a filter like a cap across the DC power would help. Of course if you have a scope you could look at the power and trigger on a spike. That would help you select a cap of the correct size. Good luck I would try a 50V 68uf cap first if I guessing.
Robert

Message-ID: <33B7C325.1D1E@apollo.wes.army.mil>
Source record: 171695
Cross-posted to: rec.radio.amateur.equipment,rec,.radio.amateur.homebrew

I was re-arranging the shack this weekend, and noticed, when reconnecting the ground, that I had a little ac voltage between the chassis and ground strapping. The ground for the shack is seperate from the house wiring ground. This is an older home with a two wire only wiring plan. The house ground is from the breaker box to earth covered copper bar. The rig ground is about 30 ft. from the house ground, and meter shows 18 vac. This has brobably been there for years and I never noticed it.

Anyone have any suggestions as to cause/cure or just forget and keep on operating as usual?

Thanks,

Butch KF5DE

7226. Help with Atlas 210x on QRP battery.

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-30 00:00:00 UTC
From: Dan <SciCon@ix.netcom.com>
Message-ID: <33B7ECDA.64@ix.netcom.com>
Source record: 171703

I am looking for a way to run a 210x on battery at QRP power.

Unless the finals are disabled in some way the 210x is very
unstable at power levels less than 50w when operated on a battery.
At 5w output, the power level fluctuates and the amp draws more than
5 amps from the battery.

I think there is a way to fix this using the 'accessory socket' in the
back of the rig, but the manual isn't clear on this.

Has anyone been able to solve this problem either using the acc. socket
or by an internal mod?

7227. Help with Kenwood 850 ALC problem

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-30 00:00:00 UTC
From: jbc5@po.cwru.EDU
Message-ID: <199706301740.NAA03927@celeste.INS.CWRU.Edu>
Source record: 171704

I would appreciate it very much if anyone has any ideas to help me. My 850 had developed a problem, most noticeable on CW, but also on Digital modes (I do not do much SSB so am not sure there) where the ALC level fluctuates up and down about 1cycle/sec. We discovered this trying to use it at field day,
when we noticed we were tearing up the other stations with keying spurs. I

put it on a good dummy load and it still occurs so it is in the rig not the antenna.
I seem to recall a similar thread re:440s but do not recall seeing anything about
850s. If you have any thoughts I would love to hear from you, Thanks.

Mark Stonier <mark.stonier@virgin.net> wrote:

>does anybody know of mods to IC-w32e, to make it full band coverage etc
>etc.

To turn on Crossband repeat, set the VHF and UHF frequencies you want, and "lock" the radio by holding the CALL (LOCK) button for 2 seconds. Then turn it OFF.

Then, turn power OF while holding the SQUELCH button (on the side of the radio, above the Push-to-talk button), and the MAIN button and the BAND button all at the same time. Then see your doctor about your sprained fingers.

To stop crossband repeat, hold down the CALL (LOCK) button for 2 seconds again. But, if the crossband repeat is in use, it won't go off. The escape hatch is to hold down the SQUELCH button again and then CALL (LOCK).

That works for sure. I think you can open up the full receive coverage by turning on the radio while holding MAIN and BAND (but not SQUELCH), but it's been a while since I've done that.

You have to add some parts to be able to transmit out-of-band, and I can't help you with that.

73,
Gary KN4AQ

>Thanks, John

Hi, John

A basic crossaband-repeat dual-band mobile is all you need. In fact, I haven't see much in the way of accessories.

The biggest problem crossbanding into another repeater is the repeater's hang-time. A crossbander simply takes a signal from one band and repeats it to the other band on a first-come first-repeated basis. And it won't stop until the signal it's hearing drops. And it's paying attention to the repeaters output carrier -- it doesn't know the difference between a repeated mobile and the repeater's hang-time, so before you can talk back via the crossband repeater, the main repeater has to drop. And some of them hold on a loooong time!

Two solutions:

The first -- just do a one-way crossband repeat, and monitor the repeater directly with your HT. This requires an HT that will mute the audio on band "B" while you transmit on band "A". Many won't do that. If yours won't, you'll get feedback, unless you use an earphone.

The Kenwood 733 has a one-way crossband repeat function available. Most mobiles don't, but you can simply park the VHF receiver on an out-of-the-way channel, guard it with PL, and adjust your transmit "offset" to put the transmitter on the repeater input.

The second -- get your repeater crew to put PL into the repeater transmitter that is only there when the repeater is receiving a signal, and is off during hang-time. That's what we did here in Raleigh on 146.64, and it's great for crossband repeat (and for the folks who complain that the repeater "talks" to much with it's voice ID announcements -- they don't have PL either, and so if you listen with PL decode, it's nice and quiet).

If this is confusing, write me back and I'll try to explain better.

73,
Gary KN4AQ

7232. WANT:MTR FOR MID 13-513(220MHZ) OR PARTS RADIO

I am looking for a working S/RF meter for a Midland 13-513 (220MHz transceiver). Or for a
parts radio with the meter still in it.

Please e-mail to PKirsfelds@connectsoft.net
Thanks Very Much

Well, don't get it if you ever plan on working sats. It doesn't transmit
below 440. Get a Yaseu FT51. It will transmit in all of the frequencies
allocated to hams in 2m and 70cm.

From: Jim <jstrohm@taxes.net>
Message-ID: <33B7CACC.4542@taxes.net>
Source record: 171714

Try tweeking the bias pot on the PA board. You should
be able to turn the mic gain down to 0 and have infinitely
controllable power on a 210X.

Alternatively, it's simple enough to add an itty bitty
relay from the driver output...hook it up through the
acc socket and bring out your control lines, and add a
bigger relay that disables the power feed to the PA board.

The only hard part is finding a nine-pin plug to match the
acc socket.

Do you have the manual for the 210X? If not, I can fix you
up for copying/postage costs.

On Mon, 30 Jun 1997 06:35:30 -0500, fleet@mbl.edu (Barnett) wrote:

>Are the optional filters for SSB worth the money? Anything gained, lost
>with their installation? Tnx in advance for any input

FWIW -- I used a IC-706 as my primary radio for about a year, with
only a single available auxiliary filter position available in the
original version of the radio. When I purchased the '706, I installed
a narrow SSB filter, but quickly discarded it in favor of the narrow
CW filter. I found the narrow (2 KHz?) SSB filter to be remarkably
ineffective. I can't recommend it.

One alternative would be to put the money toward a modern, outboard
DSP unit (not the perfect solution either).

Installation of the filter is painless and easily reversable and
doesn't do anything bad beyond taking up your only available optional
filter slot (if you have an original 706).

I haven't made or seen published any characterization of the filter,
so can't comment on its shape factor or ultimate rejection. Perhaps
Gary Coffman or someone else can provide actual data on its installed
performance, rather than my anecdotal report. And perhaps someone is
producing a better narrow SSB filter for the IC-706 these days??

If you really, really want one you might (as you may gather from the
discussion above) be able to talk me out of mine. :-)

Regards,

Mark McPherson

Source record: 171716
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew

Thare are two things that cause that. First is the leakage of a cap from AC input to the chassis, another leakage can be within the power transformer. With 2 wire plugs you can try reversing it in the socket, it will get worse or better depending on where the leakage is since one side of your 120 is "ground" and the other 120 above it.

I have a flouresent light fixture with a leak, if I touch it and the grounded equipment at the same time I get a little "tingle". Not enough to worry about but about 20 VAC..

Hi Butch,

Ground loop currents between separate grounds are not unusal. While
18Vac is not hazardous to your health, I'd still try to run a #12 or
larger wire between the two ground points.

I never got mine to be stable on battery power, but I did't
try seriously. One approach that should work is to use
two batteries, one on each power input. That will insulate
the main electronics from the power transistors and the
hugh current and voltage swing that they impose on the
main electronics. No mods, give it a try.

Hi Bob,

The IC245SSB was the mobile version of the 211- same nightmare PLL.
There never was a service manual for the 245 so I wonder if there is one
for the 211.

7248. Help with Yaesu FT-51r

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-30 00:00:00 UTC
From: golden@marpin.dm
Message-ID: <867721833.7723@dejanews.com>
Source record: 171725

Hello,

I am checking a Yaesu FT-51r with the following problem for a fellow ham.

The radio mysteriously shifted from US mode to European mode, transmitting only from 144 to 146 MHz. When I enable the general coverage receive, it receives from 60 to 180 MHz. The UHF side has similar TX range problems. How do I get the radio back to US mode? I have already tried pressing MR, VFO and 2 buttons while turning on the radio. I tried the UP, DOWN keys sequence after the MR, VFO, 2 sequence and it is still the same way.

Your input will be appreciated. (I suspect the radio was in his harmonic's posession when that happened)

Thanks,

Wayne, J73WA

Don't have thoughts about it I can tell you exactly what it is.

The DC/DC converter (supplies -6v) is failing . Replace it and problem
solved. It is on the RF unit (B4) underneath the speaker.

Order P/N X59-1100-00 (about 10-15 bucks) and replace it...

My guess is that there are so many for sale because there have been so many of them sold; in other words, it's been a hot seller, there are a lot of them out there, and so it just SEEMS that there are a lot of them on the used market. As for why someone would dump an FT-50 after a few months, it's a mystery to me. But then, some folks just don't see things my way. There's a local ham in the Minneapolis & St. Paul metro area who seems to have one or two different, nearly new pieces of expensive gear for sale on local swap nets every week. Either he's extremely fickle, has a very full wallet, or...

I've had my FT-50 for a little over 6 months, and it would be almost impossible to pry mine away from me. I love the little critter, and it goes almost everywhere with me. I remain amazed at the features that are crammed into this little gem, especially when I consider that fully half of the volume of the radio is devoted to the battery pack. I have heard numerous stories from local hams (including one EMT) who have subjected their FT-50's to all sorts of "abuse" without any adverse effects (e.g. accidentally leaving it outside in a heavy rainstorm, dropping it from a considerable height to the ground, and similar things).

Is it perfect? Certainly not. The wide-band receive capability is a real nice feature, but... (a) you can tune the FM broadcast band, but the reception of music is horrible because the wideband FM mode is not wide enough, (b) the radio is more susceptible to intermod from strong signals outside the ham band, especially if you connect it to a good antenna [e.g., I used to use it mobile with an external gain antenna but found it tough to use in the downtown Minneapolis area due to intermod; I now use an FT-5100 mobile rig and it works a lot better in high-interference locations], (c) the standard unit covers ALMOST all frequencies from 76 - 999 MHz except the obvious ones (cell phones), BUT EXCLUDING 200-300 MHz; while published mods can enable both Tx and Rx on the 1.25M band, the 222-225 MHz band remains functionally useless due to very poor reception and very low signal output.

In 6 months of heavy use (remember, I used it handheld, mobile, and in my home, so I was changing antennas 6 or more times a day!), I managed to break the SMA antenna connector. Yaesu repaired it under warranty,

and the replacement antenna connector looks like it is a sturdier design. Hopefully, that's not just wishful thinking. And besides, I now have that FT-5100 that will allow me to switch antennas on the FT-50 less often... Also in 6 months, I cracked the rubber cover over the PTT switch, and Yaseu also fixed that under warranty without the least bit of hassle.

In summary, I love my FT-50 and think that it is an excellent radio. Unless you plan to use it a lot in locations with strong out-of-band interfering signals, like downtown Manhattan, I doubt that you would regret purchasing one.

That they do... but they are really just a good exercise in soldering.
One would be better off with a North Counry Radio MPX96 or a Veronica PLL
(www.northcountryradio.com and www.ldbrewer.com respectively.) I've built
all of these and for a little more money you can actually get a really
nice signal and (*ahem*) way bitchin' sound.

I just bought a Yaesu FT-50 and would like to buy an antenna to improve reception, more than transmission. I live 20 miles away from a major airport, and if I open the squelch I can hear the control tower... I wonder if I could turn up the squelch with a roof-mount antenna, such as a ringo ranger or something??

The coax run wouldn't be too long, and I am assuming I would need to reduce the diameter for the last few feet so that I don't hurt the radio's SMA connector.

Any thoughts/ideas will be appreciated... KB8IFZ

7262. Motorola HT-600/Maxtrac/Radius

What type of equipment does it take to use a mobile as a crossband repeater for a HT to a fixed repeater? I like to hike and I was wondering what features I would need to have a mobile in the car and access a fixed repeater with a HT in the field (that I may not have enough power to reach directly). Will the mobile send the CTCSS code to access the fixed repeater?

Thanks, John
